GEOTECHNICAL DATA

1.1 SUMMARY

- A. Subsurface soil investigations have been made and findings are indicated on the following pages. This report entitled "Geotechnical Report – Proosed Worcester South High School", dated April 9, 2018 was prepared by Lahlaf Geotechnical Consulting, Inc. and is bound herewith as Appendix A.
- B. The data contained herein is for general information. The Contractor is required to read the soils report and visit the site to determine the character of the materials to be encountered. The Architect and Owner will not assume responsibility for variations in subsoil quality or condition.

1.2 CONTENTS

- A. The attached 197 pages include as part of this document the following:
  - 1. Report Letter
  - 2. Project Information
  - 3. Site and Subsurface Conditions
    - a. Subsurface Conditions
      - 1) Soil Borings
      - 2) Test Pits
    - b. Groundwater
    - c. Double Ring Infiltrometer Tests
    - d. Laboratory Test Data
  - 4. Evaluation and Recommendations
  - 5. Construction Considerations
  - 6. Future Work
  - 7. Report Limitations
  - 8. References

NON-COLLUSION AFFIDAVIT

The undersigned, being first duly sworn, deposes and says that:

(1) He is \_\_\_\_\_ of \_\_\_\_\_, the Bidder that has submitted the attached Bid; is fully respecting the preparation and contents of the attached Bid and of all pertinent circumstance respecting such Bid; and such Bid is genuine and is not a collusive or sham Bid;

(2) Neither the said Bidder nor any of its officers, partners, owners, agents, representatives, employees or parties in interest, including this affiant, has in any way colluded, conspired, connived or agreed, directly or indirectly with any other Bidder, firm or person to submit a collusive or sham Bid in connection with the Contract for which the attached Bid has been submitted or to refrain from bidding in connection with such Contract, or has in any manner, directly or indirectly, sought by agreement or collusion or communication or conference with any other Bidder, firm or person to fix the price or prices in the attached Bid or of any other Bidder, or to fix any overhead, profit or cost element of the Bid price or the Bid price of any other Bidder, or to secure through any collusion, conspiracy, connivance or unlawful agreement any advantage against the Owner, or any person interested in the proposed Contract; and

(3) The price or prices quoted in the attached Bid are fair and proper and are not tainted by any collusion, conspiracy, connivance or unlawful agreement on the part of the Bidder or any of its agents, representatives, owners, employees, or parties in interest, including this affiant.

(4) The undersigned certifies under penalties of perjury that this bid is in all respects bona fide, fair and made without collusion or fraud with any other person. As used herein, the word person shall mean any natural person, joint venture, partnership, corporation or other business or legal entity; and

(5) The undersigned also hereby certifies under the penalties of perjury that no person acting for, or employed by, the Commonwealth of Massachusetts, the Massachusetts School Building Authority or the City of Worcester is directly or indirectly interested in this proposal, or in any contract which be made under it, or in expected profits to arise therefrom.

## **ARTICLE I** **DEFINITION OF TERMS**

The following words shall have the following meanings as used in this Contract:

**Advertisement:**

The Advertisement or Notice Inviting Bids or Proposals for the Work.

**Approval (or Approved):**

An approval in writing signed by the authorized signatory of the City of Worcester.

**Architect:**

The architect identified as the Designer in Article 1 of the Owner-CM Agreement.

**As directed (As permitted, as required, as determined or words of like effect):** The direction, permission, requirement or determination of the City of Worcester unless otherwise stated in the Contract Documents. Similarly, *approved*, *acceptable*, *satisfactory* or words of like import shall mean approved by or acceptable or satisfactory to the Designer and the City of Worcester, except as may be otherwise determined by the City of Worcester.

**Building Code:**

All applicable rules and regulations to which the City of Worcester is subject and which are contained or referenced in the code authorized by M.G.L. c. 143, s. 93 et seq., including all amendments thereto.

**Certificate of Agency Use and Occupancy:**

A certificate signed by the Designer and the City of Worcester pursuant to the requirements of Article VI of these General Conditions of the Contract, indicating that the City of Worcester has determined that (1) the Work has been completed in accordance with the Contract Documents, except for Punch List items, (2) certificates of inspection, testing and/or approval (including a certificate of occupancy under the Building Code), operating permits for any mechanical apparatus which may be required to permit full use and occupancy of the Work by its intended users (which in a Subcontractor's case may include the Contractor) have been delivered to the City of Worcester, (3) any applicable written warranties, operating instructions and related materials have been delivered to the City of Worcester, and (4) the Work may be used for its intended purpose without substantial inconvenience or interference.

**Change Order:**

(1) A written order not requiring the consent of the CM, signed by the Project Manager and designated as a Change Order, directing the CM to make changes in the Work within the general scope of the Contract, or (2) any written or oral order from the Project Manager that causes any change in the Work Provided that the CM has given the City of Worcester written notice stating the date, circumstances, and source of the order and that the CM regards the order as a Change Order.

**Construction Manager, Contractor, CM and General Contractor:**

The person, corporation or other entity with whom the City of Worcester has executed the CM Agreement.

**Construction Manager's Key Personnel:**

The personnel listed in the Construction Manager's Proposal and Sections B.1, C.1, and C.2 of Exhibit GC of the Owner-CM Agreement, all of whom shall be dedicated to the

Project on a full time basis, and which personnel shall include at a minimum the Project Executive, the Project Manager, the Superintendent (who shall be a properly licensed construction supervisor), and the Project Scheduler. Unless otherwise designated by the CM, the Project Executive shall have complete authority to act for the CM.

**Contract:**

The Contract formed by the Contract Documents.

**Contract Documents:**

The documents listed in Article 2 of the Owner-CM Agreement.

**Contract Modification:**

Any alteration of the Contract Documents accomplished by a written agreement properly executed by the parties to this Contract.

**Contract Price:**

The Contract Price constitutes full compensation to the CM for everything to be performed and furnished in connection with the Work and for all damages arising out of the performance of the Work for which the City of Worcester is responsible, and constitutes the maximum compensation regardless of any difficulty incurred by the CM in connection with the Work or in consequence of any suspension or discontinuance of the Work. See also definition of Guaranteed Maximum Price.

**Designer:**

The architect or engineer identified as the Designer in the Preliminary Statement of the Owner- CM Agreement, subject to the provisions of Article III, Section 1 of these General Conditions of the Contract.

**Drawings:**

The Drawings are the graphic and pictorial portions of the Contract Documents, wherever located and whenever issued, showing the design, location and dimensions of the Work, generally including Plans, elevations, sections, details, schedules, and diagrams.

**Engineer:** The Designer, except that the term "Resident Engineer" shall have the meaning otherwise specified herein.

**Final Acceptance:**

The written determination by the City of Worcester that the Work has been 100% completed, except for the CM's indemnification obligations, warranty obligations, obligations to continue to maintain insurance coverage for the time periods provided in the Contract Documents, and any other obligations which are intended to survive Final Acceptance and/or the termination of the Contract.

**Guaranteed Maximum Price:**

Guaranteed maximum price", or "GMP", is the agreed total dollar amount for the construction management at risk services, including the cost of the work, the general conditions and the fees charged by the construction management at risk firm; also known as the Contract Price.

**Laws:**

All applicable statutes, regulations, ordinances, codes, laws, orders, decrees, approvals, certificates and requirements of governmental and quasi-governmental authorities.

**Neutral:**

An impartial third party not having an interest in the Owner, the Designer, the Program Manager, the CM or the Project.

**Notice to Proceed (NTP):**

The written notice provided by the City of Worcester to the CM which authorizes the CM to commence the Work as of a date specified therein, from which date the times specified in Article 4 of the Owner-CM Agreement is measured. The City of Worcester may issue more than one

NTP, including but not limited to separate NTPs for Preconstruction and Construction Services, in which case the date from which the time for completion of construction is measured shall be as stated in the appropriate NTP.

**Or equal (or words of like import):**

Equal in the opinion of the City of Worcester determined pursuant to the provisions of M.G.L. c.30, s. 39M and the provisions of these General Conditions of the Contract.

**Owner:**

The Commonwealth of Massachusetts or political subdivision thereof, authority, or other instrumentality that will own the Work. This term may also be used interchangeably with the term "the City of Worcester."

**Plan(s):**

Drawing(s).

**Product Data:**

Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams and other information furnished by the CM or its Subcontractors and suppliers to illustrate materials or equipment for some portion of the Work. Product data shall also include any such information or instructions produced by the manufacturer or distributor of such materials or equipment and made readily available by said manufacturer or distributor.

**Progress Schedule:**

The progress schedule submitted by the CM Approved by the City of Worcester in accordance with the Contract Documents.

**Project:**

The Project is the total construction of which the Work performed under the Contract Documents may be the whole or a part and which may include construction by separate contractors.

**Project Manager:**

The City of Worcester's representative assigned to the Project.

**Punch List:**

A list of items determined by the City of Worcester to be minor incomplete or unsatisfactory work items that do not materially impair the usefulness of the Work for its intended purpose.

**Resident Engineer:**

The on-Site representative of the City of Worcester.

**Samples:**

Samples are physical examples, that illustrate materials, equipment, or workmanship and establish standards by which the Work will be judged.

**Schedule of Values:**

The schedule Approved by the City of Worcester pursuant to Article VIII of these General Conditions of the Contract which allocates the Contract Price to the various portions of the Work and is used as a basis for payments to the CM.

**Shop Drawings:**

Drawings, diagrams, details, schedules, and other data specially prepared for the Work by the CM or a Subcontractor, Sub-subcontractor, manufacturer, supplier, or distributor to illustrate a portion of the Work.

**Site:**

The land and, if any, building(s) or space within any such building(s) on which or in which the CM is to perform the Work.

**Specifications:**

The Specifications are that portion of the Contract Documents consisting of the written requirements for materials, equipment, construction systems, standards, and workmanship for the Work and performance of related services.

**Subcontractor:**

Person or entity with whom the CM or a subcontractor contracts in order to perform the Work, except as otherwise specifically provided or required herein or by Law. "Subcontractor" when used also means "Trade Contractor" except when otherwise specified.

**Substantial Completion:**

"Substantial completion" shall occur when (1) the CM fully completes the Work or substantially completes the Work so that the value of the Work remaining to be done is, in the estimate of the City of Worcester, less than one percent of the adjusted contract price, or (2) the CM substantially completes the work and the City of Worcester takes possession for occupancy, whichever occurs first.

**Superintendent:**

The licensed construction supervisor who is an employee of the CM designated to be in full time attendance at the Site throughout the prosecution and progress of the Work and who shall have complete authority to act for the CM.

**Trade Contractor:**

Subcontractors under Contract with the CM to perform the work of the trades listed in paragraph 1.1 of the Procedures for Award of Subcontracts at Appendix C, and selected under the process authorized in M.G.L. c. 149A and Section I of the aforementioned Procedures by the CM. Sometimes referred to as "Filed Subcontractor" or "Filed Subbidder."

**Work:**

The Work consists of all the work identified in the Contract Documents. The Work comprises the completed construction required by the Contract Documents and includes all labor, tools, materials, supplies, equipment, permits, approvals, paperwork, calculations, submittals, and certificates necessary to develop, construct and complete the Work in accordance with all Laws, and all construction and other services required to be supervised, overseen, performed or furnished by CM or that the Contract Documents require the CM to cause to be supervised, overseen, performed or furnished. The CM shall provide and perform for the Contract Price all of the duties and obligations set forth in the Contract Documents.

All terms that this Contract defines may be used with or without initial capital letters. Other terms, abbreviations and references are defined as they appear herein. Words and abbreviations that are not defined in the Contract Documents but which have recognized technical or trade meanings are used in accordance with those meanings. For additional definitions of terms, abbreviations and references refer to the *General Requirements, or Specifications*.

## **ARTICLE II**

### **EXECUTION OF THE CONTRACT, SCOPE OF WORK, INTERPRETATION OF CONTRACT DOCUMENTS, DISTRIBUTION OF WORK, SUBCONTRACTS**

#### **1. Execution**

The execution of the Owner – CM Agreement by the CM is a representation that the CM has visited the Site, has become familiar with local conditions under which the Work is to be performed and has correlated observations at the site with requirements of the Contract Documents.

#### **2. Scope of Work**

The Work consists of all the work identified in the Contract Documents. The Work comprises the completed construction required by the Contract Documents and includes all labor, tools, materials, supplies, equipment, permits, approvals, paperwork, calculations, submittals, and certificates necessary to develop, construct and complete the Work in accordance with all Laws, and all construction and other services required to be supervised, overseen, performed or furnished by CM or that the Contract Documents require the CM to cause to be supervised, overseen, performed or furnished. The CM shall provide and perform for the Contract Price all of the duties and obligations set forth in the Contract Documents.

#### **3. Interpretation**

A. The Plans and Specifications and other Contract Documents are to be considered together and are intended to be mutually complementary, so that any work shown on the Plans though not specified in the Specifications, and any work specified in the Specifications though not shown on the Plans, is to be executed by the CM as a part of this Contract. Should a conflict occur in or between or among any parts of the Contract Documents that are entitled to equal preference, the better quality or greater quantity shall govern, unless the City of Worcester directs otherwise. Figured dimensions shall take precedence over scaled dimensions.

B. All things that in the opinion of the City of Worcester may be reasonably inferred from the Plans, Specifications and other Contract Documents are to be executed by the CM. The Designer shall determine whether the detail Plans conform to the general Plans and Contract Documents, except as may be otherwise determined by the City of Worcester.

C. The tables of contents, titles, headings and marginal notes or sub-scripts contained herein are solely to facilitate references, are not intended to be construed as provisions of the Contract, and in no way affect the interpretation of the provisions to which they refer.

D. Where reference is made in the Contract Documents to publications, standards, or codes issued by associations or societies, such reference shall be interpreted to mean the current edition of such publications, standards, or codes, including revisions in effect on the date of the issuance of the RFP for the contract notwithstanding any reference to a particular date. The foregoing sentence shall not apply to the dates, if any, specified with respect to insurance policy endorsement forms.

**E.** In case of any conflict among the Contract Documents, unless the context clearly otherwise requires, the Contract Documents shall be construed according to the following priorities:

- First Priority: Contract Modifications and Change Orders
- Second Priority: Owner-CM Agreement as amended
- Third Priority: General and Supplementary Conditions of the Contract as amended
- Fourth Priority: Drawings as amended -- Schedules take precedence over enlarged detail Drawings, and enlarged Detail Drawings take precedence over reduced scale Drawings; figured dimensions shall prevail over scale.
- Fifth Priority: Specifications as amended
- Sixth Priority: Request for Proposals as amended
- Seventh Priority: CM's Proposal as amended

**F.** The CM shall refer to all of the Drawings, and to all of the sections of the Specifications, and shall perform all work reasonably inferable therefrom as being necessary to produce the indicated results. Neither the City of Worcester nor the Designer assumes any liability arising out of jurisdictional issues raised or claims advanced by Subcontractors, trade organizations or other interested parties based on the arrangement or manner of subdivision of the content of the Specifications and Drawings. In the event of any claim arising out of any duplication, conflict, inconsistency or discrepancy within the Specifications or on the Drawings as to the allocation of the Work among the Subcontractors the CM shall be solely responsible for resolving the claim and shall be responsible for ensuring that all of the Work is completed, regardless of where it appears in the Specifications or on the Drawings.

#### **4. Distribution of Work**

Other than as required by M.G.L. c. 149A and any other applicable provisions of the Massachusetts General Laws and these Contract Documents, the CM shall be responsible for distributing the Work in the best interests of the Project.

#### **5. Subcontracts**

Procedures for the award of contracts by the CM for the furnishing of labor, materials and equipment in the performance of the Work ("Subcontracts") shall be as specified in the procedures attached hereto as Appendix "C". The CM shall make no substitution for any Subcontractor previously selected without the prior written approval of the City of Worcester. The term Subcontractor also means Trade Contractor except when otherwise specified. The CM shall maintain and periodically update and distribute to the City of Worcester, the Program Manager and the Designer a Project Directory listing the names, addresses and telephone numbers of the principal members of the staff of each Subcontractor. The principal contact and a back-up for each Subcontractor and each of their home telephone numbers, mobile telephone numbers and pager numbers, if available, shall be indicated in the Project Directory so that such persons can be reached in emergency situations occurring beyond regular business hours.

All work shall be performed pursuant to written subcontracts. The CM shall use the Subcontract forms attached hereto in Appendix "D", for all Subcontractors. One form of Subcontract is to be used for all Trade Contractors selected for the trades listed in section 1.1 of the above referenced Procedures, and the other form is to be used for all Other Subcontractors. All subcontracts shall require the Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the CM by the terms of the Contract Documents, and to assume toward the CM all the obligations and responsibilities which the CM, by the Contract Documents, assumes toward the City of Worcester. Each Subcontract shall preserve and protect the rights of the City of Worcester under the Contract Documents with respect to the Work to be performed by the Subcontractor so that the subcontracting thereof will not prejudice such rights. The CM shall require each Subcontractor to enter into similar agreements with its Subcontractors. The CM shall provide to each proposed Subcontractor, prior to the execution of a Subcontract with such Subcontractor, copies of the Contract Documents to which the Subcontractor will be bound by this Paragraph. Each Subcontractor shall provide copies of such Contract Documents to its Subcontractors.

Each Subcontract shall provide that in the event of termination of the Contract due to the default of the CM or for any other reason, the City of Worcester shall have the right (but shall have no obligation) to assume, and/or accept assignment of and further assign to a general contractor or construction manager or other third party who is qualified and has sufficient resources to complete the Work, the rights of the CM under the Subcontract with such Subcontractor. In the event of such assumption or assignment by the City of Worcester, the Subcontractor shall have no claim against the City of Worcester or such third party for work performed by such Subcontractor or other matters arising prior to termination of the Contract, and the City of Worcester or such third party, as the case may be, shall be liable only for obligations to the Subcontractor arising after such assumption or assignment.

No Subcontract, and nothing contained herein or in any Subcontract, shall be construed to create any contractual relationship between any Subcontractor and the City of Worcester.

#### **6. Contract Price**

The Contract Price constitutes full compensation to the CM for everything to be performed and furnished in connection with the Work and for all damages arising out of the performance of the Work for which the City of Worcester is responsible, and constitutes the maximum compensation regardless of any difficulty incurred by the CM in connection with the Work or in consequence of any suspension or discontinuance of the Work.

### **ARTICLE III**

#### **CONTROL OF WORK/ADMINISTRATION OF THE CONTRACT**

##### **1. Designer**

Notwithstanding anything to the contrary expressed or implied in this Contract, any of the powers, rights, and duties of the Designer may be exercised by the City of Worcester, provided that the City of Worcester shall be under no obligation to do so. The City of Worcester may rely

on the Designer for the performance and exercise of its rights and obligations hereunder and shall be presumed to so rely on the Designer in the absence of an explicit written assumption by the City of Worcester of any such rights and obligations, except that any Approval required to be obtained from the City of Worcester hereunder shall not be valid without the signature of the City of Worcester. The City of Worcester may explicitly overrule in writing any action, determination or decision of the Designer should the City of Worcester choose to do so, except to the extent that the same would violate applicable law. Subject to the foregoing, the Designer shall be responsible for the general administration of the Contract and shall perform the duties and exercise the rights herein conferred on the Designer. Except as otherwise specifically provided herein, the Designer shall decide all questions which may arise as to the conduct, quantity, quality, equality, acceptability, fitness, and rate of progress of the several kinds of work and materials to be performed and furnished under this Contract, and shall decide all questions which may arise as to the interpretation of the Plans and Specifications and as to the fulfillment of this Contract on the part of the CM. In the case of the death, resignation, inability or refusal of the Designer to act, or the termination of his or her or its employment, the City of Worcester may appoint another person to act as Designer for the purposes of this Contract. The City of Worcester shall give written notice to the CM of any such appointment.

## **2. Right of Access to Work**

The City of Worcester, the User Agency and the Designer (and persons designated by them) may for any purpose enter upon the Work, the Site, and premises used by the CM, and the CM shall provide safe facilities therefor. Other contractors of the City of Worcester may also enter upon the same for the purposes which may be required by their contracts or work. Any differences or conflicts which may arise between the CM and other contractors of the City of Worcester with respect to their work shall be initially resolved by the Designer.

## **3. Inspection No Waiver**

No inspection by the City of Worcester or the Designer or employees or agents of either of them, and no order, measurement, certificate, approval, payment order, payment, acceptance or any other action or inaction of any of them, shall operate as a waiver by the City of Worcester of any provision of this Contract.

# **ARTICLE IV** **GENERAL PERFORMANCE OBLIGATIONS OF THE CM**

The CM shall complete for the Contract Price all of the Work in a proper, thorough, and workmanlike manner in accordance with the Contract Documents. Without limiting the foregoing and without limiting the CM's obligations under any other provision of the Contract Documents, the CM shall for the Contract Price perform the following general obligations:

**1. Review of Contract Documents and Field Conditions**

A. Before commencing the Work, the CM shall carefully study the Contract Documents and carefully compare all Specifications, Plans, Drawings, figures, dimensions, lines, marks, scales, directions of the Designer, and any other information provided by the City of Worcester and shall at once report to the Designer any questions, errors, inconsistencies, or omissions.

B. Before commencing the Work, the CM shall take field measurements and verify field conditions and shall carefully compare such field measurements and conditions and other information known to the CM with the Contract Documents and shall at once report to the Designer any questions, errors, inconsistencies, or omissions.

**2. Supervision and Construction Procedures:**

**Coordination: Cutting and Patching**

A. The CM shall supervise and direct the Work, using the CM's best skill and attention. The CM shall be solely responsible for, and shall have control over, construction means, methods, techniques, sequences and procedures, and shall be responsible for coordinating all portions of the Work under the Contract.

B. The CM shall be responsible for the proper fitting of all Work and the coordination of the operations of all trades, Subcontractors, and materialmen engaged upon the Work. The CM shall guarantee to each of its Subcontractors all dimensions which they may require for the fitting of their work to all surrounding work.

C. All necessary cutting, coring, drilling, grouting, and patching required to fit together the several parts of the Work shall be coordinated by the CM.

D. The CM shall be responsible to the City of Worcester for the acts and omissions of the CM's employees, agents and Subcontractors of all tiers, and their agents and respective contractors employees, and other persons performing portions of the Work or supplying materials therefor.

E. The CM shall be responsible for the inspection of portions of the Work already performed under this Contract to determine that such portions are in proper condition to receive subsequent Work.

F. The CM shall employ a registered land surveyor to perform any engineering required for establishing grades, lines, levels, dimensions, layouts, and reference points for the trades. The CM shall be responsible for maintaining benchmarks and other survey marks and shall replace any benchmarks or survey marks that may have become disturbed or destroyed. The CM shall verify the materials shown on the Drawings before laying out the Work and shall be responsible for any error resulting from its failure to exercise this precaution.

G. Unless otherwise required by the Contract Documents, or directed in writing by the Designer or the City of Worcester, Work shall be performed during regular Working Hours which, unless prescribed otherwise by applicable law, shall be 7:00 a.m. to 5:00 p.m. However, if the CM desires to carry on the Work outside of regular working hours or on Saturdays, Sundays, or Massachusetts or federal holidays then the CM shall provide 48 hours notice to allow satisfactory arrangements to be made for inspecting Work in progress and shall bear the costs of such inspection. the City of Worcester shall bill the CM directly for such costs.

**H.** Work performed outside of regular Working Hours without the consent or knowledge of the Designer and/or the City of Worcester shall be subject to additional inspection and testing as directed by the Designer. The cost of this inspection and testing shall be borne by the CM whether the Work is found to be acceptable or not. The City of Worcester at its election shall be entitled either to issue a credit Change Order to cover such cost or to withhold such cost from any further payments due the CM and/or to receive a payment from the CM of the amount of such cost.

### **3. Key Personnel**

The CM shall employ the Key Personnel as defined in Article I of the General Conditions unless otherwise agreed to by the City of Worcester. The Project Executive shall be the CM's senior person on Site and shall have full authority to accept communications to, make decisions for, and otherwise fully represent the CM in connection with all matters relevant to the Project. The CM's Project Manager(s) shall be responsible for one or more portions of the Work as assigned by the Project Executive. A Project Manager may be the designee of the Project Executive to exercise the Project Executive's responsibilities in the CM's Project Executive's absence. The Superintendent shall be properly licensed in accordance with the Building Code.

### **4. Labor**

**A.** The CM shall employ only competent workers. The CM shall enforce and shall require all its Subcontractors to enforce strict discipline and good order among their respective employees and other persons carrying out the Work. The CM shall not permit employment of unfit persons or persons not skilled in tasks assigned to them. Whenever the Designer or the City of Worcester shall notify the CM in writing that any worker is, in the Designer's opinion, incompetent, unfaithful, disorderly, or otherwise unsatisfactory, such employee shall be discharged from the Work and shall not again be employed on the Project except with the consent of the City of Worcester.

**B.** The CM shall ensure that all its Subcontractors employ a sufficient number of workers to carry on the Work with all proper speed in accordance with Laws, the requirements of the Contract Documents, and the Progress Schedule.

**C.** The CM shall procure materials from such sources and shall manage its own forces and the forces of its Subcontractors in such a manner as will result in harmonious labor relations on the Project Site. The CM shall cause persons to be employed in the Work who will work in harmony with others so employed.

### **5. Notices and Permits**

**A.** The CM at its sole cost shall take out and pay for all approvals, permits, user fees, certificates and licenses required by Laws, pay all charges and fees, and pay for (or cause the appropriate Subcontractor to pay for all utilities required for the proper execution of the Work.

**B.** The CM shall comply with all Laws and shall give all notices required thereby.

**C.** Except as otherwise specified in this Contract, it is not the CM's responsibility to ascertain that the Contract Documents are in accordance with applicable Laws. However, if the CM observes that portions of the Contract Documents are at variance with the requirements of Laws, the CM shall promptly notify the Designer and the City of

Worcester in writing, and necessary changes shall be accomplished by an appropriate Contract Modification.

**D.** If the CM performs Work knowing it to be contrary to Laws without giving such notice to the Designer and the City of Worcester, the CM shall bear full responsibility for such Work and all costs attributable thereto, including, without limitation, corrections to the Work.

**6. Lines, Marks, etc.**

The CM shall furnish batter boards and stakes and shall cause to be placed and maintained thereon so as to be easily read, such lines, marks and directions relating to the Work as the Designer shall from time to time direct. The Designer shall establish base lines and benchmarks on the Drawings for the locations of the Work but all other lines and grades shall be determined by the CM.

**7. Excavation**

The CM shall prevent by sheeting and shoring or bracing, if necessary, any caving or bulging of the sides of any excavation made by the CM, leaving sheeting and shoring in place, or if any is removed, filling solid the spaces left thereby.

**8. Corrections to the Work; Inspection No Bar to Subsequent Corrections**

The inspection of the Work by the Designer, the City of Worcester or its consultants shall not relieve the CM of its responsibilities to fulfill the Contract obligations. Defective work may be rejected by the Designer, the City of Worcester or its consultants whether or not such work and/or materials have been previously overlooked or misjudged by the Designer, the City of Worcester or its consultants and accepted for payment. If the Work or any part thereof shall be found defective at any time before the Final Acceptance of the whole Work, the CM shall forthwith correct such defect in a manner satisfactory to the Designer, the City of Worcester or its consultants. If any material brought upon the Site for use in the Work, or selected for the same, shall be rejected by the Designer, the City of Worcester or its consultants as unsuitable or not in conformity with the Contract Documents, or as damaged by casualty or deteriorated due to improper storage at the Site or to any other factor, the CM shall forthwith remove such materials from the Site. The CM shall pay for the cost of making good all work or property of other contractors or of the Owner destroyed or damaged by such removal or replacement; repair any injury, defect, omission or mistake in the Work as soon as it is discovered, finish and immediately make good any defect, omission or mistake in the Work and complete and leave the Work in perfect condition.

**9. Intentionally Omitted**

**10. Sanitary Facilities**

The CM shall provide and maintain sanitary facilities for all persons employed on the Work, beginning with the first worker at the Site. Said facilities shall meet the following requirements unless otherwise specified in the Supplementary Contract Documents.

**A.** There shall be no fewer facilities than the number required by applicable Laws.

**B.** Facilities shall be kept in a clean sanitary condition at all times and shall be adequately screened to be inaccessible to flies.

**11. Temporary Offices**

**A.** Except as otherwise specified in the Contract Documents, the CM shall erect the following temporary offices near the Site as directed by the Designer and adequately furnish and maintain them in a clean, orderly condition:

- (1) Refer to specification section 01500 Temporary facilities for additional information.

**12. Contract Documents and Samples at the Site**

A reasonable number of sets of Contract Documents will be furnished to the CM by the City of Worcester immediately after signing of the Contract, one of which shall be maintained at the Site for reference by authorized representatives of the City of Worcester. The CM shall maintain at the Site for the use and information of the City of Worcester one record copy of the Drawings, Specifications, Addenda, Change Orders, Approved Shop Drawings, Product Data, Samples, updated Progress Schedule, and all other submittals, all in good order and marked currently to record changes and selections made during construction. These shall be available to the Designer and the City of Worcester and shall be delivered to the Designer for submittal to the City of Worcester upon completion of the Work. The Drawings, Specifications and other documents prepared by the Designer, and copies thereof furnished to the CM, are for use solely with respect to this Project. The CM shall not permit their release to other parties except as may be necessary in dealing with governmental authorities in the ordinary course of permitting and constructing the Project. Further, they are not to be used by the CM or any Subcontractor or Supplier on other projects without the specific written consent of the City of Worcester and the Designer.

**13. Telephones**

The CM shall provide and maintain separate individual telephone service and pay for all calls relating to the Work. Service and equipment shall meet the requirements, if any, of the Contract Documents and shall include provisions for incoming and outgoing calls: (1) in the CM's field office for the use of its authorized agents and (2) in the Resident Engineer's office for the use of the Designer and authorized agents of the City of Worcester.

**14. Safety Laws, Regulations, and Practices**

**A.** The CM shall comply with all health and safety Laws applicable to the Work. Without limitation:

- (1) If the CM uses or stores toxic or hazardous substances it shall comply with M.G.L. c. 111F, s. 2, the "Right to Know" law and regulations promulgated by the Department of Public Health, 105 CMR 670, the Department of Environmental Protection, 310 CMR 33, and the Department of Labor and Workforce Development, 441 CMR 21; and shall post a Workplace Notice obtainable from the Department of Labor and Workforce Development.

- (2) The CM shall comply with the Federal Resource Conservation and Recovery Act, the Federal Comprehensive Environmental Response, Compensation and Liability Act, M.G.L. c. 21C, M.G. L. c. 21E, and any other Laws affecting toxic or hazardous materials, solid, special or hazardous waste (collectively "Hazardous Materials Laws). Should the CM discover unforeseen materials subject to Hazardous Materials Laws at the Site, the CM shall immediately notify the City of Worcester of such discovery.
- (3) The CM shall be responsible for the location of all utilities in connection with the Work. Without limiting the foregoing, the CM shall comply with Dig-Safe Laws. Dig-Safe is the Utility Underground Plant Damage Prevention System, 111 South Bedford Road, Burlington, MA 01803, 1-800-322-4844. The CM shall notify Dig-Safe of contemplated excavation, demolition, or explosive work in public or private ways, and in any utility company right of way or easement, by certified mail, with a copy to Department of Environmental Protection (DEP). This notice shall be given at least 72 hours prior to the work, but not more than sixty days before the work is to be done. Such notice shall state the name of the street or the route number of the way and shall include an accurate description of the location and nature of the proposed work. Dig-Safe is required to respond to the notice within 72 hours of receipt by designating the location of pipes, mains, wires or conduits at the Site. The CM shall not commence work until Dig-Safe has responded. The work shall be performed in such manner and with reasonable precautions taken to avoid damage to utilities under the surface at the work location. The CM shall provide the Superintendent with current Dig-Safe regulations, and a copy of M.G.L. c. 82, s. 40. Any costs related to the services performed by Dig-Safe shall be borne by the CM.
- (4) The CM shall comply with Public Law 92-596, "Occupational Safety and Health Act of 1970" (OSHA), with respect to all rules and regulations pertaining to construction, U.S. Code Title 29, sections 651 et seq. including Volume 36, numbers 75 and 105, of the Federal Register as amended, and as published by the U.S. Department of Labor.
- (5) The CM shall comply with M.G.L. c. 149, s. 129A, relative to shoring and bracing of trenches.

**B.** The CM shall take reasonable precautions to prevent damage, injury or loss to persons or property. Nothing herein shall relieve Subcontractors of their responsibility for the safety of persons and property, and for compliance with all Laws applicable to the Work and their activities in connection therewith. Without limitation, the CM shall take all reasonable precautions for the safety of, and the prevention of injury or damage to (1) all agents and employees and contractors on the Work and all other persons who may be affected thereby including the general public, (2) all the Work and all materials and equipment to be incorporated therein, whether in storage on or off the Site, under the care custody or control of the CM or any of its Subcontractors or any contractors directly or indirectly contracting through any of them, and (3) other property at the Site or adjacent thereto, including but not limited to trees, shrubs, lawns, walks, pavements, roadways, structures and utilities not designated for removal, relocation or replacement in the course

of the Work. The CM shall promptly remedy all damage or loss to any such property caused in whole or in part by the CM, any Subcontractor, or anyone directly or indirectly contracted or employed by any of them or by anyone for whose acts any of them may be liable. Without limiting the foregoing, the CM shall:

- (1) post and maintain adequate danger signs and other warnings against hazards;
- (2) promulgate safety regulations and give appropriate notices to the City of Worcester and users of adjacent utilities and property;
- (3) insure the adequate strength and safety of all scaffolding, staging and hoisting equipment, temporary shoring, bracing and tying;
- (4) protect adjoining private or public property;
- (5) provide barricades, temporary fences, and covered walkways required by prudent construction practices, Laws and/or the Contract Documents;
- (6) furnish approved hard hats and other personal protective equipment, furnish approved first aid supplies, furnish the name of the first aid attendant, and maintain a posted list of emergency facilities;
- (7) provide proper means of access to property where the existing access is cut off by the CM;
- (8) maintain from the beginning of any darkness or twilight through the whole of every night sufficient lights on or near any obstruction so as to guard to protect travelers from injury from such obstruction;
- (9) maintain adequate security at the Site so as not to expose the Work and surrounding property to vandalism or malicious mischief;
- (10) provide adequate fire protection procedures during the use of cutting torches, welding equipment, plumbers' torches and other flame and spark producing apparatus; and
- (11) take prompt action to correct any dangerous or hazardous conditions.

**C.** The CM shall not use or store explosives in the performance of the Work unless the CM first obtains the City of Worcester's prior written specific Approval. If the City of Worcester Approves the use or storage of explosives during the performance of the Work, the CM shall first comply with all Laws and obtain all permits, approvals, and certificates required in connection with the same and shall exercise best efforts, including but not limited to the employment and supervision of properly qualified personnel, to prevent damage, injuries, and accidents involving said explosives.

**D.** The CM shall not permit cutting or welding in or immediately adjacent to existing property of the Owner or of anyone else without the City of Worcester's prior Approval in each instance.

**E.** The CM shall submit a safety plan to the City of Worcester and designate by notice to the City of Worcester a full time responsible member of its organization at the Site whose duties shall include preventing accidents.

**F.** The CM shall submit to the City of Worcester without delay verbal and written reports of all accidents involving bodily injury or property damage arising in connection with the Work.

**G.** In any emergency affecting the safety of persons or property the CM shall immediately act in the exercise of reasonable judgment to prevent threatened damage, injury, or loss. The CM shall immediately notify the City of Worcester of such emergency.

**15. Debris and Chemical Waste**

A. The CM shall not permit the accumulation of interior or exterior debris. The CM shall keep the Work area clean at all times. Without limitation, garbage shall be removed daily.

B. The CM shall properly classify and remove debris and waste from the Site and transport and dispose of it, all in accordance with Laws, employing a qualified and properly licensed transporter, at any landfill, disposal or recycling facility licensed under applicable Laws, including without limitation, hazardous materials laws. The CM shall make all arrangements and give and obtain all notices, communications, documentation, permits, certificates, and approvals necessary for said disposal from the owner or officials in charge of such landfills, disposal or recycling facilities. The CM shall bear all fees and costs in connection with such classification, removal, transportation, disposal and storage. The CM shall not permit any storage of debris or waste except in accordance with Laws.

C. The CM shall not permit any open fire on the Site.

D. Chemical Waste: Chemical waste shall be stored in corrosion resistant containers, removed from the Site, and disposed of not less frequently than monthly unless more frequently required by Laws, including without limitation hazardous materials laws, or by the Contract Documents. Disposal of chemical waste shall be performed in accordance with requirements of the U.S. Environmental Protection Agency (EPA) and the Massachusetts Department of Environmental Protection (DEP). Fueling and lubricating of vehicles and equipment shall be conducted in a manner that affords the maximum protection against spills and evaporation. Lubricants shall be disposed of in accordance with procedures meeting all applicable Laws. The CM shall immediately notify the Designer of any hazardous materials release large enough to require reporting under applicable Laws. The CM shall be responsible for immediately cleaning up in accordance with Laws any oil or hazardous materials releases resulting from its operations. Any costs incurred in cleaning up any such releases shall be borne by the CM.

**16. Weather Protection (M.G.L. c. 149, s. 44G and 44F(1))**

The CM shall provide "weather protection," which means temporary protection of that Work adversely affected by moisture, wind and cold. Weather protection shall be achieved by covering, enclosing and/or heating working areas such that a minimum temperature of 40 degrees Fahrenheit is maintained at the working surface during the months of November through March in order to permit construction to be carried on during such period in accordance with the Progress Schedule. After the building or portion thereof is completely enclosed by either permanent construction or substantial temporary materials having a resistance comparable to the specified permanent construction, the CM shall provide heat therein of not less than 55 degrees F. nor more than 75 degrees F. The foregoing provisions do not supersede any specific requirements for methods of construction, curing of materials and the like. Such weather protection shall be consistent with the Progress Schedule, shall permit the continuous progress of the Work necessary to maintain an orderly and efficient sequence of construction operations, shall include one thermometer for every 2,000 square feet of floor space or fraction thereof, shall be subject to the Approval of the City of Worcester, and shall meet such additional requirements as may be specified by the City of Worcester and by the Contract Documents.

**17. Furnishings and Equipment**

When, in the opinion of the Designer, any portion of the Work is in a reasonable condition to receive fittings, furniture, or other property of the Owner not covered by this Contract, the CM shall allow the City of Worcester to bring such fittings, furniture, and/or other property into such portions of the Work and shall provide all reasonable facilities and protection thereof. No such occupancy shall be construed as interfering with the provisions relating to time of completion, or as constituting an acceptance of the whole or any part of the Work. Any furniture or fittings so installed shall be placed in the Work at the risk of the City of Worcester except that the CM shall be liable for damages or losses to such furniture or fittings to the extent such damages or losses arise in whole or in part from the negligence or intentional misconduct of CM, Subcontractors, their agents and/or employees, or anyone for whose acts CM is responsible.

**18. Intentionally Omitted**

**19. Sales Tax Exemption and Other Taxes**

All building materials and supplies as well as the rental charges for construction vehicles, equipment and machinery rented exclusively for use on the Site, or while being used exclusively for the transportation of materials for the Work are entitled to an exemption from sales taxes under M.G.L. c. 64H, s. 6(f). The CM shall take all action required to obtain the benefit of such sales tax exemption. The CM shall bear the cost of any sales taxes that CM incurs in connection with the Work and the City of Worcester shall not reimburse the CM for any such taxes. The exemption number assigned to the CM as an exempt purchaser shall be provided to the CM by the City of Worcester upon the written request of the CM.

**20. Final Cleaning**

At the completion of the Work, the CM shall remove all waste materials, rubbish, tools, equipment, machinery and surplus materials, and professionally clean all sight-exposed surfaces so that the Work is clean and ready for occupancy. Subsequent to installation of User Agency furniture, telephones, and equipment, the CM shall provide such additional cleaning as may be necessary to remove any soil resulting from installation of such furniture, telephones and equipment.

**21. Maintenance Data**

Subject to such additional requirements as may be provided in the Contract Documents, the CM shall compile four complete and identical binders of operating and maintenance data for the entire Work. The CM shall submit record maintenance data to the Designer for approval, shall submit approved maintenance data to the City of Worcester, and shall instruct and train the User Agency's personnel in proper inspection and maintenance procedures.

## **22. Closeout Procedures**

The CM shall take all actions and submit all items required for the issuance of the Certificate of Agency Use and Occupancy and Final Acceptance as specified in the Contract Documents.

## **23. Risk of Loss**

The CM shall bear all risk of loss to the Work during the term of the Contract except for any portion of the Work as to which the Certificate of Agency Use and Occupancy has been issued pursuant to Article VI of these General Conditions of the Contract. Nothing herein shall limit the CM's responsibilities under Article IX or XV of these General Conditions of the Contract.

# **ARTICLE V** **MATERIALS AND EQUIPMENT**

## **1. Materials Generally**

A. Unless otherwise specifically provided in the Contract Documents, the CM shall provide and pay for materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work.

The CM shall obtain prior written approval from the City of Worcester for permission to store materials or equipment to be incorporated in the Work, for which progress payments will be requested, at off-site locations. Any and all charges for storage, inspection and verification by the Designer and the City of Worcester, including insurance, shall be borne solely by the CM. Before approval, the City of Worcester may require, without limitation (i) evidence that the off-site location is properly secure, (ii) proper proof of insurance and proof of satisfactory contractual arrangements for transportation to the site, and (iii) a certificate from the CM stating:

- (1) The name of the member of the CM or Subcontractor that leases or owns the warehouse or other storage facility;
- (2) The location of such storage facility, including the storage space; i.e., the entire premises or certain areas of a warehouse giving the number of floors or portions thereof, and a certification that the CM has visited such location, verified the storage of such material or equipment therein or thereon (including confirmation that the materials or equipment are marked and segregated as provided below), and verified payment of all current storage charges;
- (3) The date(s) on which the material or equipment is first stored at such facility; and
- (4) A description of the materials or equipment stored, including quantities, types, manufacturers and other identification information, such as serial numbers.

The CM shall furnish to the City of Worcester, not less often than once per month, a current inventory of all materials or equipment being stored at any off-site location.

The CM shall mark each sealed carton or other item with the name of the Project and the City of Worcester, and all materials or equipment stored off-site shall be segregated to the extent required by the City of Worcester or the Designer.

Payment for materials or equipment stored off-site shall be at the reasonable discretion of the City of Worcester, taking into account the schedule requirements of the Work. Title to materials or equipment stored off-site shall be transferred at the time at which the City of Worcester pays for them, free of any lien or other interest of the Supplier or any other lien or encumbrance. Notwithstanding such transfer of title, the CM shall retain sole care, custody and control of, and shall have complete responsibility for the security and protection of, all materials or equipment included in any Application for Payment which are stored at locations other than the site, and the CM assumes all risk of loss or damage to such materials or equipment, and the CM shall hold harmless the City of Worcester from and against all liabilities arising out of or resulting from loss or damage, from any cause, to such materials or equipment for which payment is requested, including liens, security interests or other claims of any kind by Suppliers or other third parties relating to such materials or equipment.

**B.** Materials and equipment to be installed as part of the Work (both or either of which are hereinafter referred to as "materials") shall be new, unused, of recent manufacture, assembled, and used in accordance with the best construction practices. The CM shall inform itself as to, and shall comply with, the provisions of M.G.L. c. 7, s. 23A, as amended, and shall abide by the same and all applicable rules, regulations and orders made thereunder in relation to the purchase of supplies and materials in the execution of the Work, including the provisions of M.G.L. c. 7, s. 22, paragraph 17 which provides that there be *"a preference in the purchase of supplies and materials, other considerations being equal, in favor, first, of supplies and materials manufactured and sold within the Commonwealth, and, second, of supplies and materials manufactured and sold elsewhere within the United States."*

## **2. Shop Drawings, Product Data, and Samples**

**A.** The CM shall furnish to the Designer all samples of the materials to be used in the execution of the Work as required by the Contract Documents. The CM shall furnish to the Designer in a timely manner all coordination Drawings, shop details, Shop Drawings, and setting diagrams which may be necessary for acquiring and installing materials. These shall be reviewed as required by the Designer. A minimum of four (4) copies shall be submitted for final approval, one of which shall be returned to the CM, one to the Resident Engineer, one to the City of Worcester and one filed with the Designer. The inspection and approval by the Designer of Shop Drawings, etc. shall be general and shall in no way relieve the CM from responsibility for proper fitting, coordinating, construction, and construction sequencing. The CM shall furnish to the City of Worcester and the Designer such information and vouchers relative to the Work, the materials therefor, and the persons employed thereon, as the Designer shall from time to time request.

**B.** Shop Drawings, Product Data, Samples, and similar submittals are not Contract Documents. The purpose of their submission is to demonstrate for those portions of the Work for which submittals are required the way the CM proposes to conform to the information given and the design concept expressed in the Contract Documents.

C. The CM shall review, approve, and submit to the Designer, Shop Drawings, Product Data, Samples and similar submittals required by the Contract Documents with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of the City of Worcester or of separate contractors. Submittals made by the CM which are not required by the Contract Documents or which do not comply with the Contract Documents may be returned without action. The CM's attention is directed to the provisions of Section 4 of this Article V and to the Specifications.

D. The CM shall prepare and keep current for the Designer's approval a schedule of submittals which is coordinated with the Progress Schedule and allows the Designer reasonable time to review submittals.

E. The CM shall perform no portion of the Work requiring submittal and review of Shop Drawings, Product Data, Samples or similar submittals until the respective submittal has been approved by the Designer. Such Work shall be in accordance with Approved submittals.

F. By submitting Shop Drawings, Product Data, Samples and similar submittals, the CM represents that the CM has determined and verified materials, field measurements, and field construction criteria related thereto and has checked and coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents.

G. The CM shall not be relieved of responsibility for deviations from requirements of the Contract Documents by the Designer's approval of Shop Drawings, Product Data, Samples or similar submittals unless the CM has specifically informed the Designer in writing of such deviation at the time of submittal and the City of Worcester has given explicit written approval to the specific deviation. The CM shall not be relieved of responsibility for errors or omissions in Shop Drawings, Product Data, Samples, or similar submittals by the Designer's or the City of Worcester's actions.

H. The CM shall direct specific attention, in writing or on resubmitted Shop Drawings, Product Data, Samples or similar submittals, to revisions other than those requested by the Designer on previous submittals.

I. Informational submittals upon which the Designer is not expected to take responsive action may be so identified in the Contract Documents.

J. When professional certification of performance criteria of materials, systems or equipment is required by the Contract Documents, such certification must be stamped by a registered Massachusetts professional in the discipline required. The Designer shall be entitled to rely upon the accuracy and completeness of such calculations and certifications.

K. Materials furnished or used or employed under the Contract must be equal in quality to the samples furnished and be satisfactory to the Designer.

### **3. Tests**

A. Any material to be used in the Work may be tested or inspected at any time by the Designer with an independent testing company with the prior Approval of the City of Worcester and may be rejected if it fails to comply with specified tests. the City of Worcester shall pay for all testing of specified material. If the CM requests permission to use a material that was not specified, then the CM shall pay for such testing. The cost of testing of any materials that fail the testing criteria shall be borne by the CM

**B.** The CM shall notify the Designer and the City of Worcester of the proposed sources of materials in time to permit all required testing and inspection before the material is needed for incorporation into the Work. The CM shall have no claim arising from CM's failure to designate the proposed source or to order the material in time for adequate testing and inspection. Necessary arrangements shall be made to permit the Designer to make factory, shop or other inspection of materials or equipment ordered for the Work in process of manufacture or fabrication, or in storage elsewhere than the Site.

#### **4. "Or Equal" Submissions**

**A.** Where products or materials are prescribed by manufacturer name, trade name, or catalog reference, the words "or Approved equal" shall be understood to follow. An item shall be considered equal to the item so named or described if in the opinion of the Designer and the City of Worcester (a) it is at least equal in quality, durability, appearance, strength and design, (b) it performs at least equally the function imposed in the general design for the Work, and (c) it conforms substantially, even with deviations, to the detailed requirements for the items as indicated by the Specifications. Any changes in the work made necessary to accommodate products or materials substituted as an "or equal" shall be at the expense of the CM. "Approved equal" shall mean an item with respect to which the City of Worcester shall have issued a written statement to the CM to the effect that the item is, in the City of Worcester's opinion, equal within the meaning of this paragraph to that prescribed in the Contract Documents.

**B.** The CM shall be responsible for providing the Designer with any information and test results that the Designer reasonably requires to determine whether or not a material is equal to a material named or described in the Contract Documents.

**C.** Whenever the CM submits a material for approval as a substitute for a material named or described in the Contract Documents, such submission shall be made at least one hundred twenty (120) days prior to the date the materials will be used in the Work. In no event shall the CM maintain a claim for delays based upon the Designer's review of such substituted materials if the CM has failed to comply with the one hundred twenty (120) day submission requirement.

#### **5. Delivery and Storage of Materials: Inspection**

**A.** Materials and equipment shall be progressively delivered to the Site so that there will be neither delay in the progress of the Work nor an undue accumulation of materials that are not to be used within a reasonable time and so that their security, quality, and fitness of the materials for the Work is preserved.

**B.** Materials stored off Site shall be insured and stored at the expense of the CM so as to guarantee the preservation of their security, quality and fitness for the Work. Without derogating from the CM's responsibilities in the previous sentence, when necessary to avoid deterioration or damage, material (on or off Site) shall be placed on wooden platforms or other hard clean surfaces and not on the ground and shall be properly protected.

**C.** Expenses for inspection of material by the Designer and/or the City of Worcester personnel including travel, quarters, and subsistence shall be borne by the CM requesting the inspection of material stored outside the Commonwealth of Massachusetts as part of the Contract Price. The policy of the City of Worcester precludes the payment

for material stored outside the boundaries of Massachusetts except in extremely limited circumstances with the express written consent of the City of Worcester. If the CM requests an inspection of material stored outside the Commonwealth of Massachusetts, the City of Worcester will initially pay for all expenses of inspecting the material incurred by the Designer and/or the City of Worcester's personnel including travel, quarters, and subsistence. the City of Worcester will then give CM an invoice for those costs and the CM shall submit a credit Change Order for the amount of those expenses.

D. Stored materials either at the Site or at some other location agreed upon in writing shall be so located as to facilitate prompt inspection and even though approved before storage, may again be inspected prior to their use in the Work.

E. All storage sites shall be restored to their original condition by the CM at the CM's expense.

F. The CM shall take charge of and be liable for any loss of or injury to the materials for its use delivered to or in the vicinity of the place where the Work is being done, whether furnished by the Owner or otherwise; the CM shall notify the Designer as soon as any such materials are so delivered, allow them to be examined by the Designer, and furnish workers to assist therewith.

#### **6. Defective, Damaged, or Deteriorated Materials and Rejection Thereof**

The Designer may reject materials if the Designer reasonably determines that such materials do not conform to the Contract Documents in any manner, including but not limited to materials that have become damaged or deteriorated from improper storage whether or not such materials have previously been accepted. The CM at its own expense shall remove rejected materials from the Work. No rejected material, the defects of which have been subsequently corrected, shall be used except with the written permission of the Designer. Should the CM fail to remove rejected material within a reasonable time, the City of Worcester may, in addition to any other available remedies, remove and/or replace the rejected material, and deduct the cost of such removal and/or replacement from any moneys due or to become due the CM. No extra time shall be allowed for completion of Work by reason of such rejection. The inspection of the Work shall not relieve the CM of any of its obligations herein prescribed, and any defective Work shall be corrected. Work not conforming to the Contract Documents may be rejected notwithstanding that such Work and materials have been previously overlooked or misjudged by the Designer and accepted for payment. If the Work or any part thereof shall be found defective at any time before Final Acceptance of the whole Work, the CM shall forthwith make good such defect in a manner satisfactory to the Designer. Nothing in the Contract shall be construed as vesting in the CM any property rights in the materials used after they have been attached or affixed to the Work or the Site; but all such materials shall upon being so attached or affixed become a property of the Owner.

**ARTICLE VI**  
**PROSECUTION AND PROGRESS**

**1. Beginning, Progress Schedule, and Completion of Work**

A. The Contract time shall commence upon the date specified and in accordance with any conditions in the Notice to Proceed.

B. Prior to the submission of the first progress payment, CM shall submit and the City of Worcester shall approve a progress schedule which complies with the requirements of specification section 013200 . Upon Approval by the City of Worcester, said schedule shall constitute the Progress Schedule. The CM shall comply with all requirements of said section 01310.

C. Time is of the essence of this Contract. The Work shall be completed within the time specified in the Owner-CM Agreement. Should the CM require additional time to complete the Work, the CM shall document the reasons therefor and submit a written request for an extension of time within 20 days of the occurrence of the event alleged to be the cause of the delay, as provided in this Article and in Article VII of these General Conditions of the Contract. Failure to submit said written request within the time required by the preceding sentence shall preclude the CM from subsequently claiming any time extension due to said delay.

D. If, in the opinion of the Designer or the City of Worcester, the CM fails to comply with the Progress Schedule, the City of Worcester may give the CM a written notice to that effect. whereupon (1) the CM shall, if the notice requires, discontinue all or any portion of the Work (which discontinuance shall neither terminate the Contract nor give the CM any claim for an increase in the Contract Price, damages, or an extension of any completion deadlines); or (2) at CM's sole cost increase the work force, equipment and plant, or any of them, employed on the whole or any part of the Work, to the extent required by such notice, and employ the same from day to day until the completion of the Work or such part thereof, or until the failure regarding the rate of progress, in the opinion of the Designer or the City of Worcester, shall have been sufficiently corrected.

E. If, in the opinion of the City of Worcester the CM fails to comply with the Progress Schedule, and whether or not the City of Worcester shall have given the CM a notice described in D above, the City of Worcester may (but shall not be required to) give the CM written notice of such failure and five days to cure the same. Unless the CM shall within that five days take all necessary steps to do so (including, if the City of Worcester requires, increasing its forces, equipment and plant) and continue to do so until in the opinion of the City of Worcester the failure is corrected, the City of Worcester may at the CM's expense and without terminating this Contract take exclusive or joint possession of all or a portion of the Site and employ and direct the labors of existing or such additional forces, equipment and plant as may in the Designer's or the City of Worcester's opinion be necessary to insure the completion of the Work or such part thereof within the time specified in the Contract Documents or at the earliest possible date thereafter. the City of Worcester may exercise its rights under this Article at any time and from time to time without waiving any of its rights under this Contract, at law or in equity, including, without limitation, the right to deem this Contract terminated or to order the CM to discontinue the Work at any time thereafter. The CM shall continue to

perform the remaining Work under this Contract even if the City of Worcester elects to have another contractor perform a portion of the Work under this Article.

F. the City of Worcester shall deduct the cost of any actions the City of Worcester takes under this Article from any amount then due or which might have become due to the CM under this Contract had the CM performed as required. On demand, the CM shall pay the City of Worcester any amount by which the cost of completing all or any portion of the Work exceeds the amount attributable to that Work under the Contract Documents. the City of Worcester's sole goal will be to complete the Work that it elects to complete within the time limits stated in the Contract or at the earliest possible date thereafter. Consequently, the City of Worcester shall have no obligation to obtain competitive bids or the lowest cost for completing the Work or any part thereof, except when it is required by law. the City of Worcester's election to complete all or part of the Work shall not release the CM from any liability for failure to complete the Work as the Contract Documents require, and shall not entitle the CM to a claim for an increase in the Contract Price or an extension of the time for completing the Work. If the cost that the City of Worcester incurs in completing all or any portion of the Work is less than the amount that the Contract Documents attribute to that Work, the City of Worcester will pay or credit the difference to the CM, less any other costs and expenses that the City of Worcester incurs, including the cost of supervision, and the Designer's and attorneys' fees and costs.

## **2. Failure to Complete Work on Time - Liquidated Damages**

A. If liquidated damages are specified in the Owner - CM Agreement, the City of Worcester has determined that its damages as a result of CM's failure to complete the Work to the point at which it qualifies for the issuance of a Certificate of Agency Use and Occupancy will be difficult or impracticable to ascertain. Accordingly, if the Work is not completed to such point by the date specified in this Contract, the CM shall pay to the City of Worcester the sum designated as liquidated damages in the Contract for each and every calendar day that the CM is in default in completing the Work to such point. Such moneys shall be paid as liquidated damages, not as a penalty, to cover losses and expenses to the City of Worcester and/or the User Agency resulting solely from the fact that the Work is not completed on time.

B. Similarly, if the Contract states that by a specified date a designated portion of the Work shall be prosecuted to the point at which it qualifies for the issuance of a Certificate of Agency Use and Occupancy, and if such portion has not been prosecuted to such point by said date, the CM shall pay to the City of Worcester the sum designated in the Contract for each calendar day that the CM is in default in completing such portion of the Work to such point. Such moneys shall also be paid as liquidated damages not as a penalty, to cover losses and expenses to the Owner resulting solely from the fact that the Work is not completed on time.

C. the City of Worcester may recover such liquidated damages by deducting the amount thereof from any moneys due or that might become due the CM, and if such moneys shall be insufficient to cover the liquidated damages, then the CM or the Surety shall pay to the City of Worcester the amount due.

**D.** Permitting the CM to continue and finish the Work or any portion of it after the time fixed in the Contract for its completion shall not be deemed as a waiver of any of the Owner's rights hereunder, at law or in equity.

**E.** Liquidated damages or a portion thereof may be waived by the City of Worcester if the CM submits evidence satisfactory to the City of Worcester that the delay was caused solely by conditions beyond the control of the CM and that the City of Worcester has not suffered any damages as a result of said delay.

**F.** Failure by the City of Worcester to specify a sum as liquidated damages in the Owner-CM Agreement, or the insertion of "N/A" or "none" in the space provided therein for liquidated damages, shall not be deemed a waiver of the City of Worcester's right to recover actual damages arising from the CM's failure to complete the Work on time.

### **3. Delays: Statutory Provisions (M.G.L. c. 30, s. 39O)**

**A.** Notwithstanding any provision of this Contract to the contrary, except as otherwise provided by law as set forth in paragraph B below, the CM shall not be entitled to increase the Contract Price or to receive damages on account of any hindrances or delays, avoidable or unavoidable; but if any delay is caused in the opinion of the City of Worcester, by the City of Worcester, the CM shall be entitled to an extension of time. The length of the extension shall be sufficient in the opinion of the City of Worcester for the CM to complete the Work. Although no delay shall increase the Contract Price, the City of Worcester may require that any change in the date by which the CM must complete all or any part of the Work be processed on a standard Change Order form.

**B.** If a suspension, delay, interruption or failure to act of the City of Worcester increases the cost of performance to any Subcontractor, that Subcontractor shall have the same rights against the CM with respect to such increase as the CM shall have against the City of Worcester by virtue of (a) and (b) of M.G.L. c. 30, s. 39O set forth below, but nothing in provisions (a) and (b) shall alter any other rights which the CM or the Subcontractor may have against each other. As used in the statutory language of (a) and (b) below, "contract" means this Contract, "general contractor" means the CM and "Awarding Authority" means the City of Worcester:

*"(a) The Awarding Authority may order the general contractor in writing to suspend, delay, or interrupt all or any part of the work for such period of time as it may determine to be appropriate for the convenience of the Awarding Authority; provided, however, that if there is a suspension, delay or interruption for fifteen days or more or due to a failure of the Awarding Authority to act within the time specified in this contract, the Awarding Authority shall make an adjustment in the contract price for any increase in the cost of performance of this contract but shall not include any profit to the general contractor on such increase; and provided further, that the Awarding Authority shall not make any adjustment in the contract price under this provision for any suspension, delay, interruption or failure to act to the extent that such is due to any cause for which this contract provides for an equitable adjustment of the contract price under any other contract provisions.*

*(b) The general contractor must submit the amount of a claim under provision (a) to the Awarding Authority in writing as soon as practicable after the end of the suspension, delay, interruption or failure to act and, in any event, not later than the date of final payment under this contract and except for costs due to a suspension order, the Awarding Authority shall not approve any costs in the claim incurred more than*

*twenty days before the general contractor notified the Awarding Authority in writing of the act or failure to act involved in the claim."*

**4. Use and Occupancy Prior to Final Acceptance**

A. The CM agrees to the use and occupancy of the Project or any portion thereof before Final Acceptance of the Work by the City of Worcester.

B. the City of Worcester and the User Agency will cooperate with the CM with respect to the completion of the Work by taking such reasonable steps as may be possible to avoid interference with the CM's Work provided that they do not interfere with the proper functioning of the facility.

C. The CM shall not be responsible for wear and tear or damage resulting solely from temporary occupancy.

D. Use and occupancy of any part of the Work prior to Final Acceptance by the City of Worcester shall not relieve the CM from maintaining the required payment and performance bonds and insurance (to the extent that insurance is required to be maintained after Substantial Completion) required by this Contract.

**5. Certificate of Agency Use and Occupancy**

A. When the Work, or portion thereof which the City of Worcester agrees to accept separately has reached the state of Substantial Completion as shown on an Approved payment request, the CM shall develop, with the participation of the Designer and the City of Worcester, the Punch List identifying those items of unfinished or unacceptable Work that remain to be performed or corrected under the Contract.

B. Before the Work shall be deemed completed to the point where it is ready for the issuance of a Certificate of Agency Use and Occupancy, the CM shall:

- (1) Provide CM's proposed Punch List containing a statement of the reason for each item listed thereon;
- (2) Advise the City of Worcester of proposed changes in insurance in accordance with the provisions of this Contract, and provide to the City of Worcester evidence of CM's Completed Operations insurance coverage to the extent required by the Contract Documents;
- (3) Execute and submit a notarized warranty on a form provided by the City of Worcester meeting the requirements of Article IX of these General Conditions of the Contract, to commence upon the date of the issuance of the Certificate of Agency Use and Occupancy for the Work or the designated portion thereof, unless otherwise provided in the Certificate of Agency Use and Occupancy;
- (4) Submit signed special warranties and warranties of longer than one year as required by the Contract Documents;
- (5) Submit signed maintenance agreements for all portions of the Work specified to receive maintenance after the issuance of the Certificate of Agency Use and Occupancy;
- (6) Submit all preliminary record Drawings and documents and framed data in the forms required by the Contract Documents;
- (7) Complete all items required to be completed by the Department of Public Safety and obtain a Certificate of Occupancy from the Department of

- Public Safety and similar releases which permit the User Agency and the City of Worcester full and unrestricted use of the areas claimed to be ready for occupancy;
- (8) Deliver specified maintenance stocks of materials, required spare parts, and all special tools furnished by manufacturers to persons designated by the City of Worcester and obtain written receipts for same;
  - (9) Make final changes of lock cylinders or cores and advise the City of Worcester of the change of project security responsibility;
  - (10) Complete start-up of systems and instruct User Agency personnel on proper operation and routine maintenance of all systems and equipment; obtain and submit to Agency personnel that start-up and instruction have been completed;
  - (11) Remove all remaining temporary facilities that are no longer needed, surplus materials, and debris; (the CM shall not remove construction offices and trailers without the prior Approval of the City of Worcester);
  - (12) Submit final utility meter readings and similar information and advise the User Agency and the City of Worcester of the change of responsibility for utility charges and payments upon the issuance of the Certificate of Agency Use and Occupancy;
  - (13) Complete final clean-up of all Work, restoration of damaged finishes, and replacement of all damaged and broken glass not listed on the CM's Punch List.
  - (14) Complete such other items as may be called for in the Contract Documents, if any, or in the Specifications.

C. After completing the items specified in subsection B above, the CM shall make a written request for the Designer's inspection for a Certificate of Agency Use and Occupancy in accordance with the Contract Documents. The Designer shall review the submittals and the Work and shall either 1) sign a Certificate of Agency Use and Occupancy or 2) notify the CM of incomplete and/or incorrect Work that must be completed and corrected prior to the issuance of the Certificate of Agency Use and Occupancy. The Designer shall notify the CM of any additions to the Punch List. In connection with the execution of the Certificate of Agency Use and Occupancy the Designer shall assign dollar values to each item on the Punch List. Failure to include any incomplete or defective item on the Punch List shall not relieve the CM of the obligation to complete all Work in accordance with the Contract Documents.

## **6. Final Acceptance of the Work**

A. Prerequisites for Final Acceptance. After the issuance of a Certificate of Agency Use and Occupancy for the entire Work, and after the CM has completed all of the Work required by this Contract, including Change Orders and Punch List Items, the CM shall submit the following completed items to the City of Worcester together with such additional items as may be specified in the Contract Documents:

- (1) A completed Final Application for Payment showing a final accounting of all changes in the Work, on the form provided by the City of Worcester.
- (2) Certification and satisfactory evidence that all taxes, fees, and similar obligations have been paid.

- (3) Consent of the Surety to Final Payment executed by applicable bonding companies.
- (4) Certified copy of the Punch List stating that the CM has completed or corrected every item listed.
- (5) Evidence of CM's continuing Completed Operations Insurance coverage to the extent required by the Contract Documents.
- (6) All final record Drawings and documents in the forms specified by the Contract Documents.
- (7) A notarized certification that all purchases made under the tax exemption certificate were legitimate and entitled to exemption.
- (8) Written certifications from the Department of Public Safety and the Designer to the effect that: a) the Work has been inspected for compliance with the Contract Documents and has satisfied the Department of Public Safety; b) all equipment and systems included in the Work have been tested in the presence of the Designer and are operational and satisfactory; c) the Work is completed and ready for final inspection.
- (9) Such other items as may be required by the Contract Documents.

**B. Re-inspection; Final Acceptance.** After notification from the CM that all remaining contract exceptions, omissions and incompletions have been completed (with the exception of CM's continuing warranty, insurance, indemnification, and such other obligations as are intended by the terms of the Contract Documents to extend beyond the date of Final Acceptance), the City of Worcester and the Designer shall inspect the Work to verify the completion of the same. If the Work is satisfactory, the City of Worcester shall prepare a Certificate of Final Acceptance or shall notify CM of items which remain to be completed prior to Final Acceptance.

#### **7. One-Year Warranty Repair List and Inspection**

Approximately 30 days prior to the expiration of the comprehensive one-year warranty period, the CM shall schedule an appointment with the City of Worcester for a re-inspection of the Work with the City of Worcester, and shall thereafter inspect the work at the time scheduled. Based on this inspection and on prior inspections, the City of Worcester shall issue a "Warranty Repair List" of items to be corrected by the CM. The CM shall make the repairs and/or replacements listed within 30 days of the issuance of the Warranty Repair List unless otherwise agreed by the City of Worcester in writing.

## **ARTICLE VII** **CHANGES IN THE WORK**

### **1. Change Orders Generally**

**A.** No changes in the Work, the Contract Price, the Substantial and Final Completion dates, or any other provision of an Approval by the City of Worcester of the Contract Documents shall be made in absence of a Change Order as defined in Article I of these General Conditions of the Contract, directing the CM to perform such changes. Any request for a change in the provisions of this Contract submitted by the CM must be made in writing and in accordance with the provisions of this Contract, including the procedures of the City of Worcester.

**B.** A request for a change in the provisions of this Contract may be submitted to the City of Worcester by the CM, Designer, Resident Engineer or User Agency. The request must be made in writing and in accordance with the provisions of this Contract, Laws, and the procedures of the City of Worcester. When the CM believes that an event or circumstance gives rise to an adjustment in the Contract Price and/or the Contract Time it shall submit a request for a change order in accordance with the forms and procedures required by the City of Worcester.

**C.** A written directive (sometimes called a Notice to Proceed or a Notice of Intent may be issued by the City of Worcester instructing the CM to make changes in the Work within the scope of the Contract, including but not limited to, changes in: (1) the Plans and Specifications; (2) the method or manner of performance of the Work; (3) the Owner-furnished facilities, equipment, materials, services or Site; (4) the schedule for performance of the Work.

**D.** The CM shall immediately perform any changes in the work that are ordered by the City of Worcester.

**E.** Whenever a Change Order or written directive will cause a change in the CM's cost, the CM or the City of Worcester may request an adjustment in the Contract Price. Such request shall be in writing and shall be submitted by the party making such claim to the other party before commencement of the pertinent work or as soon thereafter as possible.

**F.** the City of Worcester and the CM shall negotiate in good faith an agreement on an equitable adjustment in the Contract Price, and/or time if appropriate, before commencement of the pertinent work or as soon thereafter as is possible. In the absence of an agreement for an equitable adjustment, the City of Worcester shall unilaterally determine the costs attributable to the change and provide the CM with a written notice to that effect. The CM may appeal the decision of the City of Worcester within thirty days of receipt of said notice, to the commissioner of the City of Worcester or his designee, and the CM shall have the right to such further appeal as is provided in M.G.L. c.30, s. 39Q set forth in Section 4.D of this Article VII. However, if the CM shall exercise its rights to appeal the decision of the City of Worcester as aforesaid, the CM shall be required to engage in the mandatory mediation procedures set forth in Section 5 of this Article VII.

**G.** During the negotiation of an equitable adjustment in the Contract Price, the CM shall, if requested, provide the City of Worcester with all cost, pricing data and any other information or documentation used by it in computing the amount of the equitable

adjustment, and the CM shall certify that the pricing data used was accurate, complete, current and reasonable. If the City of Worcester subsequently determines that the data submitted by the CM was incomplete, incorrect, not current, or unreasonable, the City of Worcester may exclude such data from consideration under the equitable adjustment request.

**H.** Whenever the Construction Manager is entitled or believes it is entitled to a Change Order adjusting the Contract Price, the Construction Manager shall maintain separate accounts (by job order or other suitable accounting procedure) of all costs incurred and attributable to such work. The Construction Manager shall maintain a computerized accounting system, acceptable to the City of Worcester, in which current information as to the status of all such work is maintained. The Construction Manager shall maintain such contemporaneous records as are necessary to provide a clear distinction between the costs of all Change Order Work and proposed Change Order Work, and the costs of other Work.

**I.** Notwithstanding any provisions in the Contract Documents to the contrary, no additional General Conditions Cost shall be due for any Change Order or portion of a Change Order resulting from or attributable to:

- (1) Increases in the cost of Allowance items;
- (2) Substitutions of equipment or materials which are functionally similar to equipment or materials specified in the Contract Documents; or
- (3) Sales and use taxes.

## **2. Methods of Computing Equitable Adjustments**

**A.** Equitable adjustments in the Contract Price shall be determined according to one of the following methods, or a combination thereof, as determined by the City of Worcester:

- (1) fixed price basis, provided that the fixed price shall be inclusive of items (a) through (e) below and shall be computed in accordance with those provisions;
- (2) estimated lump sum basis to be adjusted in accordance with Contract unit prices or other agreed upon unit prices provided that the unit prices shall be inclusive of all costs related to such equitable adjustment;
- (3) time and materials basis to be subsequently adjusted on the basis of actual costs (but subject to a predetermined "not to exceed limit") calculated as follows:
  - a) the direct cost (or credit) for labor at the minimum wage rates established for this Contract pursuant to M.G.L. c. 149, s 26-27H, and the direct cost for material and use of equipment;
  - b) plus (or minus) the cost of Workmen's Compensation Insurance, Liability Insurance, Federal Social Security and Massachusetts Unemployment Compensation, or as an alternative the CM may elect to use a flat 30% of the total labor rate computed in accordance with subparagraph (a) above;
  - c) plus an allowance equal to 20% of the amount of (a) above for General Conditions, overhead, superintendence, fee, and profit; (5% of the allowance shall be paid to the CM and the Subcontractor shall be paid 15% of the Allowance).

- d) plus (or minus) the actual direct additional premium costs and expenses incurred as a result of collective bargaining agreements or other agreements between organized labor and employers, and plus (or minus) the actual direct premium cost of payment and performance bonds required of CM and Trade Subcontractors for this Contract.

**B.** If the net change is an addition to the Contract Price, it shall include the CM's overhead, superintendence and profit. On any change that involves a net credit, no allowance for overhead, superintendence and profits shall be included. For any change that does not include labor performed or materials installed in the project, there will be no markup for the CM's or Subcontractor's overhead, superintendence, and profit, even though there may be a net increase in the Contract Price. Charges for small tools known as "tools of the trade" are not to be computed in the amount of any change in the Contract Price.

**C.** Adjustments in Subcontractors made under the provisions of the Procedure for Award of Subcontracts shall not be considered Change Orders and shall not entitle the CM to any adjustments for overhead, profit, and superintendence, although the City of Worcester may require that such Contract adjustments be processed on standard Change Order and equitable adjustment forms.

### **3. Work Performed under Protest**

The CM agrees to perform all Work as directed by the City of Worcester, and if the the City of Worcester determines that certain Work that the CM believes to be or to warrant a Change Order under this Article does not represent a change in the Work, the CM shall perform said Work. The CM shall be deemed to have concurred with the the City of Worcester's determination as aforesaid unless the CM shall perform Work under protest in compliance with the following sub-paragraphs (1) and (2) below:

- (1) If the CM claims compensation for a change in the Work that is not deemed by the the City of Worcester to be a change or to warrant additional compensation as claimed by the CM, the CM shall on or before the first working day following the commencement of any such work or the sustaining of any such damage submit to the City of Worcester a written statement of the nature of such work or claim. The CM shall not be entitled to additional compensation for any work performed or damage sustained for which written notice is not given within the time limit specified in the preceding sentence, even though similar in character to work or damage with respect to which notice is timely given.
- (2) On or before the second working day after the commencement of such work or the sustaining of such damage, and daily thereafter, the CM shall file to the extent possible with the Resident Engineer, the Designer, and the City of Worcester, itemized statements of the details and costs of such work performed or damage sustained. The CM shall use the City of Worcester Daily Time and Materials Report found in the City of Worcester Form 13 to record all labor and material used. If the CM shall fail to make such statements to the extent possible, then the CM shall not be entitled to additional compensation for any such work or damages.

**4. False Claims, Statutory Provisions Regarding Changes**

**A. Criminal Penalties:** The CM's attention is directed to M.G.L. c. 30, s. 39I which provides criminal penalties for unauthorized deviations from the Plans and Specifications, and to M.G.L. c. 30, s. 39J and M.G.L. c. 7, s. 42E-42I. The CM's attention is also directed to M.G.L. 266, s. 67B which provides criminal penalties for false claims by Contractor under this Contract:

*"Whoever makes or presents to any employee, department, agency or public instrumentality of the commonwealth, or of any political subdivision thereof, any claim upon or against any department, agency, or public instrumentality of the commonwealth, or any political subdivision thereof, knowing such claim to be false, fictitious, or fraudulent, shall be punished by a fine of not more than ten thousand dollars or by imprisonment in the state prison for not more than five years, or in the house of correction for not more than two and one-half years, or both."*

**B. Differing Site Conditions (M.G.L. c. 30, s. 39N):**

*"If, during the progress of the work, the contractor or the Awarding Authority discovers that the actual subsurface or latent physical conditions encountered at the Site differ substantially or materially from those shown on the plans or indicated in the contract documents either the contractor or the contracting authority may request an equitable adjustment in the contract price of the contract applying to work affected by the differing Site conditions. A request for such an adjustment shall be in writing and shall be delivered by the party making such claim to the other party as soon as possible after such conditions are discovered. Upon receipt of such a claim from a contractor, or upon its own initiative, the contracting authority shall make an investigation of such physical conditions, and, if they differ substantially or materially from those shown on the plans or indicated in the contract documents or from those ordinarily encountered and generally recognized as inherent in work of the character provided for in the plans and contract documents and are of such a nature as to cause an increase or decrease in the cost of performance of the work or a change in the construction methods required for the performance of the work which results in an increase or decrease in the cost of the work, the contracting authority shall make an equitable adjustment in the contract price and the contract shall be modified in writing accordingly."*

**C. Timely Decision By the City of Worcester( M.G.L. c. 30, s. 39P):** *"Every contract subject to section thirty-nine M of this chapter or section forty-four A of chapter one hundred forty-nine which requires the Awarding Authority, any official, its architect or engineer to make a decision on interpretation of the specifications, approval of equipment, material or any other approval, or progress of the work, shall require that the decision be made promptly and, in any event, no later than thirty days after the written submission for decision; but if such decision requires extended investigation and study, the Awarding Authority, the official, architect or engineer shall, within thirty days after the receipt of the submission, give the party making the submission written notice of the reasons why the decision cannot be made within the thirty day period and the date by which the decision will be made."*

**D. Change Order / Contract Interpretation Appeal Procedure (M.G.L. c. 30, s. 39Q):** The following provisions apply to every contract awarded by any state agency as defined by M.G.L. c. 7, s. 39A for the construction, reconstruction, alteration,

remodeling, repair or demolition of any capital facility as defined by the aforesaid section 39A:

*"(a) Disputes regarding changes in and interpretations of the terms or scope of the contract and denials of or failures to act upon claims for payment for extra work or materials shall be resolved according to the following procedures, which shall constitute the exclusive method for resolving such disputes. Written notice of the matter in dispute shall be submitted promptly by the claimant to the chief executive official of the state agency which awarded the contract or his designee. No person or business entity having a contract with a state agency shall delay, suspend, or curtail performance under that contract as a result of any dispute subject to this section. Any disputed order, decision or action by the agency or its authorized representative shall be fully performed or complied with pending resolution of the dispute.*

*"(b) Within thirty days of submission of the dispute to the chief executive official of the state agency or his designee, he shall issue a written decision stating the reasons therefore, and shall notify the parties of their right of appeal under this section. If the official or his designee is unable to issue a decision within thirty days, he shall notify the parties to the dispute in writing of the reasons why a decision cannot be issued within thirty days and of the date by which the decision shall issue. Failure to issue a decision within the thirty-day period or within the additional time period specified in such written notice shall be deemed to constitute a denial of the claim and shall authorize resort to the appeal procedure described below. The decision of the chief executive official or his/her designee shall be final and conclusive unless an appeal is taken as provided below.*

*"(c) Within twenty-one calendar days of the receipt of a written decision or of the failure to issue a decision as stated in the preceding subparagraph, any aggrieved party may file a notice of claim for an adjudicatory hearing with the division of hearing officers or the aggrieved party may file an action directly in a court of competent jurisdiction and shall serve copies thereof upon all other parties in the form and manner prescribed by the rules governing the conduct of adjudicatory proceedings of the division of hearing officers. In the event an aggrieved party exercises his option to file an action directly in court as provided in the previous sentence, the twenty-one day period shall not apply to such filing and the period of filing such action shall be the same period otherwise applicable for filing a civil action in superior court. The appeal shall be referred to a hearing officer experienced in construction law and shall be prosecuted in accordance with the formal rules of procedure for the conduct of adjudicatory hearings of the division of hearing officers, except as provided below. The hearing officer shall issue a final decision as expeditiously as possible, but in no event more than one hundred and twenty calendar days after conclusion of the adjudicatory hearing, unless the decision is delayed by a request for extension of time for filing post-hearing briefs or other submissions assented to by all parties. Whenever, because an extension of time has been granted, the hearing officer is unable to issue a decision within one hundred and twenty days, s/he shall notify all parties of the reasons for the delay and the date when the decision will issue.*

*Failure to issue a decision within the one hundred and twenty-day period or within the additional period specified in such written notice shall give the petitioner the right to pursue any legal remedies available to him without further delay.*

*"(d) When the amount in dispute is less than ten thousand dollars, a contractor who is party to the dispute may elect to submit the appeal to a hearing officer experienced in construction law for expedited hearing in accordance with the informal rules of practice and procedure of the division of hearing officers. An expedited hearing under this subparagraph shall be available at the sole option of the contractor. The hearing officer shall issue a decision no later than sixty days following the conclusion of any hearing conducted pursuant to this subparagraph. The hearing officer's decision shall be final and conclusive, and shall not be set aside except in cases of fraud."*

#### **5. Mandatory Mediation**

In the case of every dispute where the dollar amount in dispute (or the estimated dollar value of the extension of time in dispute) is \$50,000 or more and the CM appeals the decision of the chief executive officer of the City of Worcester or his designee described in Section 4.B above, the City of Worcester and the CM shall engage in good faith in a non-binding mediation process, which process shall be concluded within sixty days from the date that the CM files an appeal from said decision as provided in Section 4.B above. In the case of such disputes where the dollar amount in dispute (or the estimated dollar value of the extension of time in dispute) is \$500,000 or more, the parties shall, if the mediation process fails, submit the dispute to a third-party Neutral or Dispute Review Board which shall within sixty days render a non-binding advisory opinion. Unless the parties have previously agreed in writing to a process for submitting disputes to mediation or a Dispute Review Board, the City of Worcester shall determine in its reasonable discretion the procedures to be followed and shall give the CM notice of the same in writing within 7 days of the date that the City of Worcester receives notice of the CM's appeal from the decision of the chief executive officer of the City of Worcester or his designee. The cost of the services of any mediator selected by one party to this Contract shall be borne by the party making the selection. The cost of the services of any mediator selected jointly by the parties to this Contract or jointly by mediators selected by the parties to this Contract shall be borne equally by the CM and the City of Worcester.

### **ARTICLE VIII** **PAYMENT PROVISIONS**

#### **1. Schedule of Values**

Before submission of the first request for payment under this Contract, the CM shall submit to the City of Worcester a schedule of values for its approval, which shall include all preconstruction activities as well as all construction activities and shall be in sufficient detail to reflect the various preconstruction activities and the major components of each construction trade (with relevant Subcontractors as well as MBE/WBEs noted), including quantities when requested, aggregating the GMP with detail for the Contingency and divided so as to facilitate payments for work under each section of the Specifications. The

schedule shall be prepared in such form and supported by such data to substantiate its accuracy as the the City of Worcester may require. When Approved by the the City of Worcester, it shall constitute the Schedule of Values and shall be used only as a basis for the CM's requests for payments and credits, the first of which payments shall not be made until such Schedule of Values is approved by the City of Worcester.

## **2. Payment Liabilities of CM**

**A.** The CM shall pay to the City of Worcester all expenses, losses and damages, as determined by the City of Worcester , incurred in consequence of any default, defect, omission or mistake of the CM or his employees or Subcontractors or the making good thereof.

**B.** If the Work (or a portion thereof) is not completed to Substantial Completion and the CM has not satisfied the requirements for the issuance of a Certificate of Agency Use and Occupancy in accordance with Article VI, Section 5 of these General Conditions, by the date specified in the Owner-CM Agreement, the CM shall pay to the Owner liquidated damages as provided in Article VI, Section 2 of these General Conditions of the Contract.

## **3. Retention of Moneys by the City of Worcester**

**A.** the City of Worcester may keep any moneys which would otherwise be payable at any time hereunder, and apply the same, or so much as may be necessary therefor, to (1) the the City of Worcester 's expenditures for the CM's account, (2) to secure the City of Worcester's remedies against the CM for the CM's breach of its obligations under this Contract or the breach of any person performing any part of the Work and (3) the payment of any expenses, losses or damages incurred by the City of Worcester or any agency of the Commonwealth as a result of the failure of the CM to perform its obligations hereunder. the City of Worcester may retain, until all claims are settled, such moneys as the City of Worcester estimates to be the fair value of the City of Worcester's claims against the CM, and of all claims for labor performed or furnished and for materials used or employed in or in connection with the Work and for the rental of vehicles, appliances and equipment employed and for the employment of substitute contractors and labor in connection with the Work filed in accordance with M.G.L. c. 30, s. 39A and s. 39F. the City of Worcester may make such settlements and apply thereto any moneys retained under this Contract.

**B.** The CM shall each week examine all claims so filed, and if the same are in any respect incorrect or do not correctly show the amount due from the CM to the claimant for such labor and materials, the CM shall forthwith file with the City of Worcester a separate written statement of all inaccuracies in each claim and of the correct amount due from the CM to each claimant therefor, and shall immediately file a statement of all payments thereafter made to such claimants. Each such statement shall be sworn to and contain a detailed breakdown required by M.G.L. c. 30 s. 39F(d) and (e). Unless such statements are so filed by the CM the amount shown by the claims filed shall at the option of the City of Worcester be conclusively deemed to be the accurate amount due from the CM therefor in all accounting with the City of Worcester. If the moneys retained under this Contract are insufficient to pay the sums found by the City of Worcester to be due under the claims for labor and materials filed as aforesaid, the City

of Worcester may, at its discretion, pay the same, and the CM shall repay to the City of Worcester all sums paid out. the City of Worcester may also at its discretion use any moneys retained, due or to become due under this Contract, for the purpose of paying for both labor and materials used or employed in the Work for which claims have not been filed with the City of Worcester.

C. No moneys retained under the provisions of this Article shall be held to be statutory security for the payment of claims filed in accordance with the provisions of M.G.L. c. 149, s. 29, as amended, for which security is provided by bond.

#### **4. Applications for Payment**

A. The CM shall, once in each month on the day of the month corresponding to the day of the month specified in the Notice to Proceed referenced in Article 2 of the Owner - CM Agreement, on forms provided and in the manner prescribed by the Awarding Authority, submit to the Awarding Authority a statement showing the total amount of Work done to the time of such estimate and the value thereof as approved by the Resident Engineer and the Designer. It shall be the sole responsibility of the CM to deliver or cause to be delivered to the Resident Engineer (the "designee" as provided by M.G.L. c. 30, s. 39K), said periodic estimate in proper form, approved as provided above and arithmetically correct. All periodic estimates shall contain such certifications and other evidence supporting the CM's right to payment as the Awarding Authority may require, including without limitation, lien waivers and other evidence, on such forms as the Awarding Authority may require, establishing that title to the equipment or materials is unencumbered and has been transferred to the Owner. If there is no Resident Engineer assigned to the Contract, the Designer shall be the designee. If there is neither a Resident Engineer nor a Designer the designee shall be a person designated by the Awarding Authority at the project field office or alternatively the home office of the Awarding Authority. The CM shall include in such periodic estimate only such materials as are incorporated in the Work, except as provided in paragraph C below. The Awarding Authority shall retain five percent of such estimated value as part security for the completion of the Work and shall pay to the CM while carrying on the Work the balance not retained as aforesaid, subject to the Approval of the Awarding Authority after deducting therefrom all previous payments and all sums to be kept under the provisions of this Contract.

B. Each periodic estimate shall constitute the CM's representation that (1) the payment then requested to be disbursed has been incurred by the CM on account of the Work and is justly due to Subcontractors or, to the CM in the case of other Work performed by the CM on account thereof, (2) the materials, supplies and equipment for which Application for Payment is being submitted have been installed or incorporated into the Work or have been stored at the Site or at such off Site storage locations as the Awarding Authority shall have Approved, (3) the materials, supplies and equipment are insured in accordance with the provisions of this Contract, (4) the materials, supplies and equipment are owned by the Owner and are not subject to any liens or encumbrances, (5) the Work which is the subject of such periodic estimate has been performed in accordance with the Contract Documents and (6) that all due and payable bills with respect to the Work have been paid to date or shall be paid from the proceeds of such periodic estimate. The CM's attention is directed to the criminal penalties for false claims referenced in paragraph A above.

C. The CM may include in a periodic estimate the value of materials or equipment delivered at the Site (or at some location agreed to in writing) only upon delivery to the Awarding Authority of: (1) an acceptable transfer of title on the form provided by the Awarding Authority; (2) written certification by the CM (or applicable subcontractor) on the form provided by the Awarding Authority that the CM (or the Subcontractor which executed the transfer of title) is the lawful owner and that the materials or equipment are free from all encumbrances, accompanied by receipted invoices or other acceptable proof of prior payment for such materials; (3) a stored materials insurance binder that covers the materials for which payment is requested, that names the Owner as an insured party should the stored materials be subjected to any casualty, loss, or theft prior to their inclusion in the Work. The material(s) or equipment must, in the judgment of the Designer (1) meet the requirements of the Contract, including prior shop drawing, product data, and sample approval, (2) be ready for use, and (3) be properly stored by the CM and be adequately protected until incorporated into the Work. See also Article V.5.C of these General Conditions of the Contract concerning the cost of inspections.

D. The Awarding Authority may make changes in any periodic estimate submitted by the CM in accordance with M.G.L. c.30, s. 39K (see below) and the payment due shall be computed in accordance with the changes so made. The provisions of said section 39K shall govern payments on which the Awarding Authority has made changes.

E. No certificate for payment and no progress payment shall constitute acceptance of Work that is not in accordance with the Contract Documents.

F. The CM and all Subcontractors furnishing labor on this Contract agree to furnish certified payroll reports if requested to do so, at no additional expense to the Awarding Authority. The Awarding Authority may at all reasonable times audit such reports.

##### **5. Periodic Payments ( M.G.L. c. 30, s. 39K)**

The Awarding Authority shall make payment to the CM in accordance with M.G.L. c. 30, s. 39K, which provides as follows:

*"Within fifteen days (30 days in the case of the commonwealth, including local housing authorities) after receipt from the contractor, at the place designated by the awarding authority if such a place is so designated, of a periodic estimate requesting payment of the amount due for the preceding month, the awarding authority will make a periodic payment to the contractor for the work performed during the preceding month and for the materials not incorporated in the work but delivered and suitably stored at the site (or at some location agreed upon in writing) to which the contractor has title or to which a subcontractor has title and has authorized the contractor to transfer title to the awarding authority upon certification by the contractor that he is the lawful owner and that the materials are free from all encumbrances, but less (1) a retention based on its estimate of the fair value of its claims against the contractor and less (2) a retention for direct payments to subcontractors based on demands for same in accordance with the provisions of section thirty-nine F, and less (3) a retention not exceeding five percent of the approved amount of the periodic payment. After the receipt of a periodic estimate requesting final payment and within sixty-five days after (a) the contractor fully completes the work or substantially completes the work so that the value of the work remaining to be done is, in the estimate of the awarding authority, less than one percent of the original contract price, or (b) the contractor substantially completes the work and*

*the awarding authority takes possession for occupancy, whichever occurs first, the awarding authority shall pay the contractor the entire balance due on the Contract less (1) a retention based on its estimate of the fair value of its claims against the contractor and of the cost of completing the incomplete and unsatisfactory items of work and less (2) a retention for direct payments to subcontractors based on demands for same in accordance with the provisions of section thirty-nine F, or based on the record of payments by the contractor to the subcontractors under this contract if such record of payment indicates that the contractor has not paid subcontractors as provided in section thirty-nine F. If the awarding authority fails to make payment as herein provided, there shall be added to each such payment daily interest at the rate of three percentage points above the rediscount rate then charged by the Federal Reserve Bank of Boston commencing on the first day after said payment is due and continuing until the payment is delivered or mailed to the contractor; provided, that no interest shall be due, in any event, on the amount due on a periodic estimate for final payment until fifteen days (twenty-four days in the case of the commonwealth) after receipt of such periodic estimate from the contractor, at the place designated by the awarding authority if such a place is so designated. The contractor agrees to pay to each subcontractor a portion of any such interest paid in accordance with the amount due each subcontractor.*

*The awarding authority may make changes in any periodic estimate submitted by the contractor and the payment due on said periodic estimate shall be computed in accordance with the change so made, but such changes or any requirement for a corrected periodic estimate shall not affect the due date for the periodic payment or the date for the commencement of interest charges on the amount of the periodic payment computed in accordance with the changes made, as provided herein; provided, that the awarding authority may, within seven days after receipt, return to the contractor for correction, any periodic estimate which is not in the required form or which contains computations not arithmetically correct and, in that event, the date of receipt of such periodic estimate shall be the date of receipt of the corrected periodic estimate in proper form and with arithmetically correct computations. The date of receipt of a periodic estimate received on a Saturday shall be the first working day thereafter. The provisions of section thirty-nine G shall not apply to any contract for the construction, reconstruction, alteration, remodeling, repair or demolition of any public building to which this section applies.*

*All periodic estimates shall be submitted to the awarding authority, or to its designee as set forth in writing to the contractor, and the date of receipt by the awarding authority or its designee shall be marked on the estimate. All periodic estimates shall contain a separate item for each filed subtrade and each sub-subtrade listed in sub-bid form as required by specifications and column listing the amount paid to each filed subcontractor as of the date of the periodic estimate is filed. The person making payment for the awarding authority shall add the daily interest provided for herein to each payment for each day beyond the due date of receipt marked on the estimate.*

*A certificate of the architect to the effect that the contractor has fully or substantially completed the work shall, subject to the provisions of section thirty-nine J, be conclusive for the purposes of this section.*

*Notwithstanding the provisions of this section, at any time after the value of the work remaining to be done is, in the estimation of the awarding authority, less than 1 per cent of the adjusted contract price, or the awarding authority has determined that the contractor has substantially completed the work and the awarding authority has taken possession for occupancy, the awarding authority may send to the general contractor by certified mail, return receipt requested, a complete and final list of all incomplete and unsatisfactory work items, including, for each item on the list, a good faith estimate of the fair and reasonable cost of completing such item. The general contractor shall then complete all such work items within 30 days of receipt of such list or before the contract completion date, whichever is later. If the general contractor fails to complete all incomplete and unsatisfactory work items within 45 days after receipt of such items furnished by the awarding authority or before the contract completion date, whichever is later, subsequent to an additional 14 days' written notice to the general contractor by certified mail, return receipt requested, the awarding authority may terminate the contract and complete the incomplete and unsatisfactory work items and charge the cost of same to the general contractor and such termination shall be without prejudice to any other rights or remedies the awarding authority may have under the contract. The awarding authority shall note any such termination in the evaluation form to be filed by the awarding authority pursuant to the provisions of section 44D of chapter 149."*

**6. Payment of Subcontractors (M.G.L. c. 30, s. 39F)**

The CM shall make payments to Subcontractors in accordance with M.G.L c.30, s. 39F which is quoted in this section below. For the purposes of this Contract, the word "forthwith" appearing in paragraph (1)(a) of the quoted provision shall be deemed to mean "within five (5) business days."

*"I (a) Forthwith after the general contractor receives payment on account of a periodic estimate, the general Contractor shall pay to each subcontractor the amount paid for the labor performed and the materials furnished by that subcontractor, less any amount specified in any court proceedings barring such payment and also less any amount claimed due from the subcontractor by the general contractor.*

*(b) Not later than the sixty-fifth day after each subcontractor substantially completes his work in accordance with the Plans and Specifications, the entire balance due under the subcontract less amounts retained by the City of Worcester as the estimated cost of completing the incomplete and unsatisfactory items of work, shall be due the subcontractor; and the Awarding Authority shall pay that amount to the general contractor. The general contractor shall forthwith pay to the subcontractor the full amount received from the Awarding Authority less any amount specified in any court proceedings barring such payment and also less any amount claimed due from the subcontractor by the general contractor.*

*(c) Each payment made by the Awarding Authority to the general contractor pursuant to subparagraphs (a) and (b) of this paragraph for the labor performed*

*and the materials furnished by a subcontractor shall be made to the general contractor for the account of that subcontractor; and the Awarding Authority shall take reasonable steps to compel the general contractor to make each such payment to each such subcontractor. If the Awarding Authority has received a demand for direct payment from a subcontractor for any amount which has already been included in a payment to the general contractor or which is to be included in a payment to the general contractor for payment to the subcontractor as provided in subparagraphs (1) and (2) the Awarding Authority shall act upon the demand as provided in this section.*

*(d) If, within seventy days after the subcontractor has substantially completed the subcontract work, the subcontractor has not received from the general contractor the balance due under the subcontract including any amount due for extra labor and materials furnished to the general contractor, less any amount retained by the Awarding Authority as the estimated cost of completing the incomplete and unsatisfactory items of work, the subcontractor may demand direct payment of that balance from the Awarding Authority. The demand shall be by a sworn statement delivered to or sent by certified mail to the Awarding Authority, and a copy shall be delivered to or sent by certified mail to the general contractor at the same time. The reply shall contain a detailed breakdown of the balance due under the subcontract and also a statement of the status of completion of the subcontract work. Any demand made after substantial completion of the subcontract work shall be valid even if delivered or mailed prior to the seventieth day after the subcontractor has substantially completed the subcontract work. Within ten days after the subcontractor has delivered or so mailed the demand to the Awarding Authority and delivered or so mailed a copy to the general contractor, the general contractor may reply to the demand. The reply shall be by a sworn statement to or sent by certified mail to the Awarding Authority and a copy shall be delivered to or sent by certified mail to the subcontractor at the same time. The reply shall contain a detailed breakdown of the balance due under the subcontract including any amount due for extra labor and materials furnished to the general contractor and of the amount due for each claim made by the general contractor against the subcontractor.*

*(e) Within fifteen days after receipt of the demand by the Awarding Authority, but in no event prior to the seventieth day after substantial completion of the subcontract work, the Awarding Authority shall make direct payment to the subcontractor of the balance due under the subcontract including any amount due for extra labor and materials furnished to the general contractor, less any amount (i) retained by the Awarding Authority as the estimated cost of completing the incomplete or unsatisfactory items of work, (ii) specified in any court proceedings barring such payment, or (iii) disputed by the general contractor in the sworn reply; provided that the Awarding Authority shall not deduct from a direct payment any amount as provided in part (iii) if the reply is not sworn to, or for which the sworn reply does not contain the detailed breakdown required by subparagraph (d). The Awarding Authority shall make further direct payments to the subcontractor forthwith after the removal of the basis for deduction from direct payments made as provided in parts (i) and (ii) of this subparagraph.*

- (f) The Awarding Authority shall forthwith deposit the amount deducted from a direct payment as provided in part (iii) of subparagraph (5) in an interest-bearing joint account in the names of the general contractor and the subcontractor in a bank in Massachusetts selected by the Awarding Authority or agreed upon by the general contractor and the subcontractor and shall notify the general contractor and the subcontractor of the date of the deposit and the bank receiving the deposit. The bank shall pay the amount in the account, including accrued interest, as provided in an agreement between the general contractor and the subcontractor or as determined by decree of a court of competent jurisdiction.*
- (g) All direct payments and all deductions from demands for direct payments deposited in an interest bearing account or accounts in a bank pursuant to subparagraph (6) shall be made out of amounts payable to the general contractor at the time of receipt of a demand for direct payment from a subcontractor and out of amounts which later become payable to the General contractor and in the order of receipt of such demands from subcontractors. All direct payments shall discharge the obligation of the Awarding Authority to the general contractor to the extent of such payment.*
- (h) The Awarding Authority shall deduct from payments to a General contractor amounts which, together with the deposits in interest bearing accounts pursuant to subparagraph (6) are sufficient to satisfy all unpaid balances of demands for direct payment received from subcontractors. All such amounts shall be earmarked for such direct payments, and the subcontractors shall have a right in such deductions prior to any claims against such amounts by creditors of the general contractor.*
- (i) If the subcontractor does not receive payment as provided in subparagraph (1) or if the general contractor does not submit a periodic estimate for the value of the labor or materials performed or furnished by the subcontractor and the subcontractor does not receive payment for same when due less the deductions provided for in subparagraph (1), the subcontractor may demand direct payment by following the procedure in subparagraph (4) and the general contractor may file a sworn reply as provided in that same subparagraph. A demand made after the first day of the month following that for which the subcontractor performed or furnished the labor and materials for which the subcontractor seeks payment shall be valid even if delivered or mailed prior to the time payment was due on a periodic estimate from the general contractor. Thereafter the Awarding Authority shall proceed as provided in subparagraph (e), (f), (g) and (h)."*
- (2) Any assignment by a subcontractor of the rights under this section to a surety company furnishing a bond under the provisions of section twenty-nine of chapter one hundred forty-nine shall be invalid. The assignment and subrogation rights of the surety to amounts included in a demand for direct payment which are in the possession of the Awarding Authority or which are on deposit pursuant to subparagraph (6) shall be subordinate to the rights of all subcontractors who are entitled to be paid under this section and who have not been paid in full.*
- (3) "subcontractor" as used in this section (I) for contracts awarded as provided in sections forty-four A to forty-four L, inclusive, of chapter one hundred forty-nine shall mean a person who files a sub-bid and received a subcontract as a result of that filed*

*sub-bid or who is approved by the Awarding Authority in writing as a person performing labor or both performing labor and furnishing materials pursuant to a contract with the general contractor, (ii) for contracts awarded as provided in paragraph (1) of section thirty-nine M of chapter thirty shall mean a person approved by the Awarding Authority in writing as a person performing labor or both performing labor and furnishing materials pursuant to a contract with the general contractor, and (iii) for contracts with the commonwealth not awarded as provided in sections forty-four A to forty-four L, inclusive, of chapter one hundred forty-nine shall also mean a person contracting with the general contractor to supply materials used or employed in a public works project for a price in excess of five thousand dollars.*

*(4) A general contractor or a subcontractor shall enforce a claim to any portion of the amount of a demand for direct payment deposit as provided in subparagraph (6) by a petition in equity in the superior court against the other and the bank shall not be a necessary party. A subcontractor shall enforce a claim for direct payment or a right to require a deposit as provided in subparagraph (6) by a petition in equity in the superior court against the Awarding Authority and the general contractor shall not be a necessary party. Upon motion of any party the court shall advance for speedy trial any petition filed as provided in this paragraph. Sections fifty-nine and fifty-nine B of chapter two hundred thirty-one shall apply to such petitions. The court shall enter an interlocutory decree upon which execution shall issue for any part of a claim found due pursuant to sections fifty-nine and fifty-nine B and, upon motion of any party, shall advance for speedy trial the petition to collect the remainder of the claim. Any party aggrieved by such interlocutory decree shall have the right to appeal therefrom as from a final decree. The court shall not consolidate for trial the petition of any subcontractor with the petition of one or more subcontractors or the same general Contract unless the court finds that a substantial portion of the evidence of the same events during the course of construction (other than the fact that the claims sought to be consolidated arise under the same general contract) is applicable to the petitions sought to be consolidated and that such consolidation will prevent unnecessary duplication of evidence. A decree in any such proceeding shall not include interest on the disputed amount deposited in excess of the interest earned for the period of any such deposit. No person except a subcontractor filing a demand for direct payment for which no funds due the general contractor are available for direct payment shall have a right to file a petition in court of equity against the Awarding Authority claiming a demand for direct payment is premature and such subcontractor must file the petition before the Awarding Authority has made a direct payment to the subcontractor and has made a deposit of the disputed portion as provided in part (iii) of subparagraph (5) and in subparagraph (6).*

***(5) In any petition to collect any claim for which a subcontractor has filed a demand for direct payment the court shall, upon motion of the general contractor, reduce by the amount of any deposit of a disputed amount by the Awarding Authority as provided in part (iii) of subparagraph (5) and in subparagraph (6) any amount held under a trustee writ or pursuant to a restraining order or injunction. ”***

**7. Final Payment: Release of Claims by CM**

Upon Final Acceptance of the Work the CM shall be entitled to payment of the balance of the Contract Price. Final payment shall be as provided in this Article above and in accordance with any process set forth in the Contract Documents. The CM agrees to execute a Certificate of Final Inspection, Release (with CM's own exceptions listed thereon) and Acceptance as a condition precedent to Final Payment. The acceptance by the CM of the Final Payment made as aforesaid, or the execution of the Certificate of Final Acceptance by the CM, shall constitute a release of the Owner, the City of Worcester, the Designer, and every member and agent of any of them, from all claims of and liability to the CM for anything done or furnished for or relating to the Work, or for any act or neglect of the Owner, the Designer, or of any person relating to or affecting the Work, except the claim against the Owner or the Designer for the remainder, if any there be, of the amounts set forth by the CM in the Certificate of Final Inspection, Release and Acceptance. Final Acceptance shall not relieve CM of the requirements of Articles IX, XIV, and XV of these General Conditions of the Contract, or of other provisions of this Contract, to the extent that the same are intended to survive Final Acceptance.

**ARTICLE IX**  
**GUARANTEES AND WARRANTIES**

**1. General Warranty**

If at any time during the period of one (1) year from the date of the issuance of the Certificate of Agency Use and Occupancy by the City of Worcester or the date of Final Acceptance, whichever occurs first, any part of such Work shall in the reasonable opinion of the City of Worcester be defective or require replacing or repairing, or damage to other property of the Owner is caused by any defect in the Work, the City of Worcester shall notify the CM in writing to make the required repairs or replacements and repair such damage. If the CM shall neglect to commence such repairs or replacements to the satisfaction to the City of Worcester within ten (10) days from the date of the giving of such notice, then the City of Worcester may employ other persons to make the same. The CM agrees, upon demand, to pay to the City of Worcester all amounts which it expends for such repairs, replacements, and/or damages. During this one-year guarantee period any corrective work shall be performed under all the applicable terms of this Contract, and if Change Orders are issued in accordance with the terms of this Contract, the CM shall be entitled to compensation for special insurance, as required. This one-year guarantee shall not limit any express guaranty or warranty provided elsewhere in the Contract.

**2. Special Guarantees and Warranties**

A. The CM's obligation to correct Work as set forth in paragraph 1 above is in addition to, and not in substitution of, such guarantees or warranties as may be required in the various sections of the Specifications.

B. Guarantees and warranties required in the various sections of the Specifications must be delivered to the Designer before final payment to the CM may be made, or in the case of guarantees and warranties which originate with a subcontractor's section of the

Work, before final payment for the amount of that subtrade or for the phase of Work to which the guarantee or warranty relates.

C. The failure to deliver a required guarantee or warranty shall constitute a failure to fully complete the Work in accordance with the Contract Documents.

## **ARTICLE X**

### **MISCELLANEOUS LEGAL REQUIREMENTS**

#### **1. CM to be Informed**

The CM shall inform itself of all existing and future Laws in any manner affecting those engaged or employed in the Work, or the materials used or employed in the Work, or in any way affecting the conduct of the Work, and of all orders and decrees of bodies or tribunals having any applicable jurisdiction or authority over the Work.

#### **2. Compliance with all Laws**

The CM shall cause all persons employed in the performance of the Work to comply with, all existing and future Laws, including but not limited to those set forth below:

**A. Corporate Disclosures.** The CM, if a foreign corporation, shall comply with M.G.L. c. 181, s.3 and s. 5, and M.G.L. c. 30, s.39L.

**B. Veterans Preference.** In the employment of mechanics and apprentices, teamsters, chauffeurs, and laborers in the performance of Work in the Commonwealth, preference shall first be given to citizens of the Commonwealth who have been residents of the Commonwealth for at least six months at the commencement of their employment and who are veterans as defined M.G.L. c.4, s.7 (34), and who are qualified to perform the work to which the employment relates; and secondly, to citizens of the Commonwealth generally who have been residents of the Commonwealth for at least six months at the commencement of their employment, and if they cannot be obtained in sufficient numbers, then to citizens of the United States.

**C. Prevailing Wages.** The CM shall comply with M.G.L. c. 149, s. 26- 27H. The prevailing wage schedule is found in Exhibit C to the Owner-CM Agreement, listing the prevailing minimum wage rates that must be paid to all workers employed in the Work. the City of Worcester is not responsible for any errors, omissions, or misprints in the said schedule. Such Schedule shall continue to be the minimum rate wages payable to workers employed in the Work throughout the term of this Contract, subject to the exceptions provided in M.G.L c.149, s. 26-27H. The CM shall not have any claim for extra compensation from the Owner if the actual wages paid to workers employed in the Work exceeds the rates listed on the schedule or as otherwise provided by law. The CM shall cause a copy of said Schedule to be kept in a conspicuous place at the Site during the term of the Contract. If reserve police officers are employed by the CM, they shall be paid the prevailing wage of regular police officers. (See M.G.L c.149, s.34B).

**D. Payroll Records and Statement of Compliance.** The CM shall comply and shall cause its Subcontractors to comply with Massachusetts General Law c. 149, s. 27B, which requires that a true and accurate record be kept of all persons employed on the a project for which the prevailing wage rates have been provided. The CM and all Subcontractors shall keep these records and preserve them for a period of three years from the date of completion of the Contract. Such records shall be open to inspection by

any authorized representative of the Owner at any reasonable time, and as often as may be necessary. The CM shall, and shall cause its Subcontractors to, submit weekly copies of their weekly payroll records to the City of Worcester. In addition, the CM and each Subcontractor shall furnish to the Executive Department of Labor within fifteen days after completion of its portion of the Work a signed statement in the form required by the City of Worcester.

**E. Vehicle operators.** If the Director of the Department of Labor and Workforce Development has established a Schedule of wage rates to be paid to the operators of trucks, vehicles or equipment for the Work, the CM shall be obligated to pay such operators at least the minimum wage rate contained on such Schedule. (See M.G.L. c.149, s.26-27H).

**F. Eight Hour Day.** The CM shall comply with M.G.L. c. 149, s. 30, 34 and 34A which provide that no laborer, workman, mechanic, foreman or inspector working within the Commonwealth in the employ of the CM, subcontractor or other person doing or contracting to do the whole or part of the Work shall be required or permitted to work more than eight hours in any one day or more than forty-eight hours in any one week, or more than six days in any one week, except in cases of extraordinary emergency.

**G. Timely Payment of Wages.** The CM shall comply with, and shall cause its Subcontractors to comply with M.G.L. c. 149, s. 148 which requires the weekly or biweekly payment of employees within six days of the end of the pay period during which wages were earned if employed for five or six days of a calendar week, and within other periods of time under certain circumstances as set forth therein.

**H. Lodging, etc.** The CM shall comply with, and shall cause its Subcontractors to comply with, M.G.L. c. 149, s. 25 which provides that every employee under this Contract shall lodge, board and trade where and with whom he elects, and neither the CM nor his agents or employees shall, either directly or indirectly, require as a condition of the employment of any person that the employee shall lodge, board or trade at a particular place or with a particular person.

**I. Truck Rates.** The use by the CM of trucks or other motor vehicles hired from either common or contract motor carriers in the course of performance of this Contract is subject to such minimum rates and charges, and rules and regulations as may from time to time be promulgated by the Department of Public Utilities of the Commonwealth of Massachusetts or other agency of the State or Federal government which may be authorized by law to set rates or otherwise regulate the use of such vehicles. The CM expressly assumes the risk of any additional expense that may arise by reason of any change in such minimum rates and charges, and rules and regulations, and shall be entitled to no additional compensation or reimbursement by reason thereof.

**J. Anti-Boycott Covenant (Executive Order #130).** The CM warrants, represents and agrees that during the time this Contract is in effect, neither it or any affiliated company, as hereafter defined, participates in or cooperates with an international boycott, as defined in Section 999(b) (3) and (4) of the Internal Revenue Code of 1954, as amended, or engages in conduct declared to be unlawful by M.G.L. c. 151E, s. 2. If there shall be a breach in the warranty, representation or agreement contained in this paragraph, then without limiting such other rights as it may have the Awarding Authority shall be entitled to rescind this contract. As used herein, an affiliated company shall be any business entity of which at least 51% of the ownership interests are directly or indirectly owned by the CM or by a person or persons or business

entity or entities directly or indirectly owning at least 51% of the Ownership interests of the CM; or which directly or indirectly owns at least 51% of the Ownership interests of the CM.

**K. CM's Agreements with Suppliers--Anti-Boycott Provisions.** (1) The CM shall not purchase or rent any materials, equipment, machinery, vehicles, or supplies for or in connection with the Work from any person or entity who does not sign, under pains and penalties of perjury, a certificate that recites: "The undersigned warrants, represents and agrees that during the time its agreement with {insert CM's name} is in effect for materials, supplies or equipment to be used in connection with the {insert the name of the Awarding Authority} Project No. {insert project number}, neither the undersigned or any affiliated company, as hereafter defined, participates in or cooperates with an international boycott, as defined in Section 999(b)(3) and (4) of the Internal Revenue Code of 1954, as amended, or engages in conduct declared to be unlawful by Section 2 of Chapter 151E of the Massachusetts General Laws. As used herein, an affiliated company shall be any business entity of which at least 51% of the ownership interests are directly or indirectly owned by the undersigned or by a person or persons or business entity or entities directly or indirectly owning at least 51% of the ownership interests of the undersigned; or which directly or indirectly owns at least 51% of the ownership interests of the undersigned."

- (1) The Awarding Authority shall not be obligated to pay the CM for the cost of any materials, supplies, or equipment purchased or rented from any individual or entity from whom the CM has not previously obtained and delivered to the Awarding Authority the certificate that the previous paragraph requires. The CM will immediately terminate its contract with any supplier who breaches the warranty, representation and agreement contained in the previous paragraph.
- (2) The CM shall include in the CM's agreement with any person or entity from whom the CM intends to purchase or rent any materials, equipment, machinery, vehicles or supplies for or in connection with the Work, (a) a notice that this Contract obligates the CM to terminate the supply contract upon discovery of such breach of the sworn certificate delivered under subparagraph (1) and such termination shall be without liability to the CM or the Awarding Authority and (b) a provision which states: "The Governor or his designee, the secretary of administration and finance, and the state auditor or his designee shall have the right at reasonable times and upon reasonable notice to examine the books, records and other compilations of the undersigned vendor which pertain to the performance and requirements of this agreement to provide materials of any nature to the undersigned Contractor [CM] in connection with State Project No. (insert project number)."

**L. Access to CM's Records (Executive Order #195). The Governor or his designee, the secretary of administration and finance, and the state auditor or his designee shall have the right at reasonable times and upon reasonable notice to examine the books, records and other compilations of data of the CM which pertain to the performance and requirements of this Contract.**

## **ARTICLE XI**

### **CM'S ACCOUNTING METHOD REQUIREMENTS (M.G.L. c. 30, s. 39R)**

#### **1. Definitions**

The words defined herein shall have the meaning stated below whenever they appear in this Article XI:

***Contractor*** means the CM.

***Contract*** means any Contract awarded, which is for an amount or estimated amount greater than one hundred thousand dollars.

***Independent Certified Public Accountant*** means a person duly registered in good standing and entitled to practice as a certified public accountant under the laws of the place of his/her residence or principal office and who is in fact independent. In determining whether an accountant is independent with aspect to a particular person, appropriate consideration should be given to all relationships between the accountant and that person or any affiliate thereof. Determination of an accountant's independence shall not be confined to the relationships existing in connection with the filing of reports with the City of Worcester.

***Records*** means books of original entry, accounts, checks, bank statements and all other banking documents, correspondence, memoranda, invoices, computer printouts, tapes, discs, papers and other documents or transcribed information of any type, whether expressed in ordinary or machine language.

***Audit***, when used in regard to financial statements, means an examination of records by an independent certified public accountant in accordance with generally accepted accounting principles and auditing standards for the purpose of expressing a certified opinion thereon, or, in the alternative, a qualified opinion or a declination to express an opinion for stated reasons, or other person or persons primarily responsible for the financial and operational policies and practices of the Contractor.

Accounting terms, unless otherwise defined herein, shall have a meaning in accordance with generally accepted accounting principles and auditing standards.

#### **2. Record Keeping**

A. The Contractor shall make, and keep for at least six years after final payment, books, records, and accounts that in reasonable detail accurately and fairly reflect the transactions and dispositions of the Contractor.

B. Until the expiration of six years after final payment, the Inspector General, the City of Worcester, and the City of Worcester shall have the right to examine any books, documents, papers or records of the Contractor and Subcontractors that directly pertain to, and involve transactions relating to the Contractor and Subcontractors. Any request for a change in the provisions of this Contract submitted by the CM must be made in writing and in accordance with the provisions of this Contract, including the procedures of the City of Worcester.

C. The Contractor shall describe any change in the method of maintaining records or recording transactions which materially affects any statements filed with the City of Worcester including the date of the change and reasons therefor, and shall accompany said description with a letter from the Contractor's independent certified public accountant approving or otherwise commenting on the changes.

D. The Contractor represents that it has, prior to the execution of the Contract, filed a statement of management on internal accounting controls as set forth in Section 3 below.

E. The Contractor represents that it has, prior to the execution of the Contract, filed an audited financial statement for the most recent completed fiscal year as set forth in section 4 below and will continue to file such statement annually during the term of the Contract.

### **3. Statement of Management Controls**

A. The Contractor shall file with the City of Worcester a statement of management as to whether the system of internal accounting controls of the Contractor and its subsidiaries reasonably assures that:

- (1) transactions are executed in accordance with management's general and specific authorization;
- (2) transactions are recorded as necessary to: (a) to permit preparation of financial statements in conformity with generally accepted accounting principles, and (b) to maintain accountability for assets;
- (3) access to assets is permitted only in accordance with management's general or specific authorization; and
- (4) the recorded accountability for assets is compared with the existing assets at reasonable intervals and appropriate action was taken with respect to any difference.

B. The Contractor shall file with the City of Worcester a statement prepared and signed by an independent certified public accountant, stating that the accountant has examined the statement of management on internal accounting controls, and expressing an opinion as to:

- (1) whether the representations of management in response to subparagraph 3 above are consistent with the results of management's evaluation of the system of internal accounting controls; and
- (2) whether such representations of management are reasonable with respect to transactions and assets in amounts which would be material when measured in relation to the applicant's financial statement.

### **4. Annual Financial Statement**

A. Every Contractor awarded a contract shall annually file with the City of Worcester during the term of the Contract a financial statement prepared by an independent certified public accountant on the basis of an audit by such accountant. The final statement filed shall include the date of final payment. All statements shall be accompanied by an accountant's report.

B. The office of Inspector General and the City of Worcester shall have the right to enforce the provisions of this Article. A Contractor's failure to satisfy any of the requirements of this section may be grounds for debarment pursuant to M.G.L. c. 149, s. 44C.

### **5. Bid Pricing Materials**

The Contractor shall save the written calculations, pricing information, and other data that the Contractor used to calculate the bid that induced the City of Worcester to enter

into this Contract (the "Bid Pricing Materials") for at least six years after the City of Worcester makes final payment under this Contract.

**ARTICLE XII**  
**EQUAL EMPLOYMENT OPPORTUNITY,  
NON-DISCRIMINATION AND AFFIRMATIVE ACTION PROGRAM**

This Contract includes all provisions of the City of Worcester's "Equal Employment Opportunity, Non-Discrimination, and Affirmative Action Program" appearing in Appendix A to these General Conditions of the Contract attached hereto and incorporated herein by reference.

**ARTICLE XIII**  
**GOALS FOR PARTICIPATION BY  
MINORITY BUSINESS ENTERPRISES  
AND WOMEN BUSINESS ENTERPRISES  
(EXECUTIVE ORDER 390)**

This Contract includes all provisions of the City of Worcester's program relating to Goals for Participation by Minority Business Enterprises and Women Business Enterprises attached appearing in Appendix B to these General Conditions of the Contract attached hereto and incorporated herein by reference.

**ARTICLE XIV**  
**INSURANCE REQUIREMENTS**

**1. Insurance Generally**

A. The CM shall take out and maintain the insurance coverages listed in this Article with respect to the operations as well as the completed operations of this Contract. This insurance shall be provided at the CM's expense and shall be in full force and effect for the full term of the Contract or for such longer period as this Article requires.

B. All policies shall be written on an occurrence basis and be issued by companies authorized to write that type of insurance under the laws of the Commonwealth and rated in Best's Insurance Guide (or any successor thereto or replacement thereof) as having a general policy holder rating of "A" or better and a financial rating of at least "9" or otherwise acceptable to the City of Worcester.

C. CM shall submit three originals of each certificate of insurance, acceptable to the City of Worcester, simultaneously with the execution of this Contract. Certificates shall show the City of Worcester and the Owner as an additional insured as to all policies of liability insurance and shall state that CM has paid all premiums and that none of the coverages shall be cancelled, terminated, or materially modified unless and until 30 days prior notice is given in writing to the City of Worcester. Contractor shall submit updated certificates prior to the expiration of any of the policies referenced in the certificates so that

the City of Worcester shall at all times possess certificates indicating current coverage. Certificates shall indicate that the contractual liability coverage, and Contractor's Protective Liability coverage is in force. Certificates shall include specific acknowledgment that the following coverages are included in the policies:

- Contractual liability
- Contractor's protective
- Owner as additional insured by form CG2010 (11/85 ed.) to the general liability
- Owner as additional insured to automobile liability, umbrella liability, and pollution liability
- General Liability is endorsed with CG2404, Waiver of Subrogation, in favor of the Owner
- Builder's Risk or Installation Floater includes Owner, CM and subcontractors of any tier as named insureds. Builder's Risk or Installation Floater is on an All Risk basis including earthquake and flood.

**D.** The CM shall file one certified copy of all policies with the City of Worcester within sixty days after Contract award. If the City of Worcester or the Owner is damaged by the CM's failure to maintain such insurance and to comply with the terms of this Article, then the CM shall be responsible for all costs and damages to the Owner attributable thereto.

**E.** Termination, cancellation, or material modification of any insurance required by this Contract, whether by the insurer or the insured, shall not be valid unless written notice thereof is given to the City of Worcester at least thirty days prior to the effective date thereof, which shall be expressed in said notice

## **2. CM's Commercial General Liability**

**A.** The CM shall provide the following minimum general liability coverage with respect to the operations performed by CM and any employee, subcontractor, or supplier, unless a higher coverage is specified in Exhibit A to the Owner-CM Agreement, in which case the CM shall provide the additional coverage:

|                                 |  |
|---------------------------------|--|
| Bodily Injury                   | \$1,000,000 each occurrence                |
| Property Damage                 | \$2,000,000 general aggregate, per project |
| Products & Completed Operations | \$1,000,000 annual aggregate               |
| Personal & Advertising Injury   | \$1,000,000 each occurrence                |
| Medical Expenses                | \$10,000                                   |
| Fire Damage Liability           | \$100,000                                  |

**B.** This policy shall include coverage relating to explosion, collapse, and underground property damage.

**C.** This policy shall include contractual liability coverage.

**D.** The completed operations coverage shall be maintained for a period of three (3) years after Substantial Completion.

E. If the Work includes work to be performed within 50 feet of a railroad, any exclusion for liability assumed under contract for work within 50 feet of a railroad shall be deleted.

F. This policy shall include endorsement CG2010 (10/85 edition), *Owner as Additional Insured* and CG2404 (11/85 edition) *Waiver of Subrogation in Favor of Owner*.

### 3. **Vehicle Liability**

A. The CM shall provide the following minimum coverage with respect to the operations of any employee, including coverage for owned, non-owned, and hired vehicles, unless a higher coverage is specified in Exhibit A to the Owner-CM Agreement, in which case the CM shall provide the additional coverage:

Combined Single Limit                      \$1,000,000

B. The policy shall include a CA9948 Pollution Endorsement and shall name the Owner as an Additional Insured.

### 4. **Pollution Liability**

The CM shall provide coverage for bodily injury and property damage resulting from liability arising out of pollution related exposures such as asbestos abatement, lead paint abatement, tank removal, removal of contaminated soil, etc. the City of Worcester and the Owner shall be named as an additional insured and coverage must be on an occurrence basis. The amount of coverage shall be \$1,000,000 per occurrence and \$3,000,000 in the aggregate unless a higher amount is specified in Exhibit A to the Owner-CM Agreement, in which case the CM shall provide the additional coverage.

### 5. **Worker's Compensation**

A. The CM shall provide the following coverage in accordance with M.G.L. c.149 §34A and c.152 as amended, unless a higher coverage is specified in Exhibit B to the Owner-CM Agreement, in which case the CM shall provide the higher coverage:

#### **Worker's Compensation**

Part One: Provide Statutory Minimum

Employer's Liability — \$ 500,000 each accident

Part Two: \$ 500,000 disease per employee

\$500,000 disease policy aggregate

B. If specified in Exhibit A to the Owner-CM Agreement the policy must be endorsed to cover United States Longshoremen & Harborworkers Act (USLHW), Maritime Liability for \$1,000,000/\$1,000,000, or Federal Employer's Liability Act liability.

### 6. **Builder's Risk/Installation Floater/Stored Materials**

A. The CM shall provide coverage against loss or damage on all Work included in this Contract in an amount equal to the GMP. Such coverage shall be written on an all risks basis or equivalent form and shall include, without limitation, insurance against perils of fire (with extended coverage) and physical loss or damage including, without duplication of coverage, theft, vandalism, malicious mischief, collapse, earthquake, flood (if the project is not in an "A" or a "V" flood Zone), windstorm, falsework, testing and startup, temporary buildings and debris removal including demolition occasioned by enforcement of any applicable legal requirements, and shall cover reasonable compensation for Architect's and

CM's services and expenses required as a result of such insured loss. This policy and/or installation floater shall indicate if Stored Materials coverage is provided as required below.

**B.** When Work will be completed on existing buildings owned by the Owner, the CM shall provide an installation floater, in the full amount of the Contract Price. Such coverage shall be written on an all risks basis or equivalent form and shall include, without limitation, insurance against perils of fire (with extended coverage) and physical loss or damage including, without duplication of coverage, theft, vandalism, malicious mischief, collapse, earthquake, flood (if the project is not in an "A" or a "V" flood Zone), windstorm, falsework, testing and startup, temporary buildings and debris removal including demolition occasioned by enforcement of any applicable legal requirements, and shall cover reasonable compensation for Architect's, Program Manager's and CM's services and expenses required as a result of such insured loss. This policy and/or installation floater shall indicate if Stored Materials coverage is provided as required below.

**C.** The CM shall maintain insurance on delivered and/or stored material designated to be incorporated in the Work against fire, theft or other hazards. Any loss or damage of whatever nature to such material while stored at some approved off Site location shall be forthwith replaced by the CM at no expense to the City of Worcester.

**D.** The policy or policies shall specifically state they are for the benefit of and payable to the City of Worcester, the CM, subcontractors and all persons furnishing labor or labor and materials for the Contract Work, as their interests may appear. The policy or policies shall list the City of Worcester, the CM, and Subcontractors of any tier as named insureds.

**E.** Coverage shall include any costs for work performed by the Designer or any consultant as the result of a loss experienced during the term of this Contract.

**F.** Coverage shall include temporary occupancy and waiver of subrogation.

## **7. Umbrella Coverage**

The CM shall provide Umbrella Coverage in form at least as broad as primary coverages required by Sections 2, 3 and 5 of this Article in the following amount unless a higher amount is specified in Exhibit A to the Owner-CM Agreement, in which case the CM shall provide the higher amount:

| <b><u>Umbrella Coverage</u></b> | <b><u>GMP Amount</u></b> |
|---------------------------------|--------------------------|
| Under \$1,000,000               | \$ 2,000,000             |
| \$1,000,000 -- \$5,000,000      | \$ 5,000,000             |
| \$5,000,001-- \$10,000,000      | \$ 10,000,000            |
| \$10,000,001 and over           | \$ 25,000,000            |

## **8. Additional types of Insurance and Deductibles**

The CM shall provide such other types of insurance as may be required by Exhibit A to the Owner-CM Agreement. If the policies required herein contain deductible amounts, the CM shall be responsible for such deductible amounts, unless the City of Worcester specifically provides a written waiver to the CM.

# **ARTICLE XV** **INDEMNIFICATION**

## **1. Generally**

To the fullest extent permitted by law, the CM shall indemnify, defend (with counsel subject to the supervision of the Attorney General of the Commonwealth of Massachusetts as required by M.G.L. c. 12, s. 3) and hold harmless the City of Worcester and their officers, agents, divisions, agencies, employees, representatives, successors and assigns from and against all claims, damages, losses and expenses, including but not limited to court costs and attorneys' fees, arising out of or resulting from the performance of the Work, including but not limited to those arising or resulting from:

- labor performed or furnished and/or materials used or employed in the performance of the Work;
- violations by CM, any Subcontractor, or by any person directly or indirectly employed or used by any of them in the performance of the Work or anyone for whose acts any of them may be liable (CM, subcontractor and all such persons herein collectively called "CM's Personnel") of any Laws;
- violations of any provision of this Contract by CM or its subcontractors, suppliers or any other person or firm providing labor and/or materials for the work.;
- injuries to any persons or damage to any property in connection with the Work; or
- any act, omission, or neglect of CM's Personnel.

The CM shall be obligated as provided above, regardless of whether or not such claims, damages, losses and/or expenses, are caused in whole or in part by the actions or inactions of a party indemnified hereunder. In any and all claims by CM's Personnel against parties indemnified hereunder, the CM's indemnification obligation set forth above shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for the CM or any subcontractor under workers' or workmen's compensation acts, disability benefit acts or other employee benefit acts. Such obligation shall not be construed to negate, abridge, or otherwise reduce any other right or obligation of indemnity which would otherwise exist as to any party or person described in this Article XV.

## **2. Designer's Actions**

The obligations of the CM under Section 1 above shall not extend to the liability of the Designer, its agents or employees, arising out of (i) the preparation or approval of maps, Drawings, opinions, reports, surveys Change Orders, designs or Specifications, or (ii) the giving of or the failure to give directions or instructions by the Designer, its agents to employees provided such giving or failure to give is the primary cause of the injury or damage.

## **3. Survival**

The provisions of this Article XV are intended to survive Final Acceptance and/or any termination of this Contract.

# **ARTICLE XVI** **PERFORMANCE AND PAYMENT BONDS**

## **1. CM Bonds**

A. The CM shall provide performance and payment (labor and materials) bonds in the form provided by the City of Worcester, executed by a surety licensed by the

Commonwealth of Massachusetts Division of Insurance. Each such bond shall be in the amount of the GMP.

**B.** If at any time prior to final payment to the CM, the Surety:

- is adjudged bankrupt or has made a general assignment for the benefit of its creditors;
- has liquidated all assets and/or has made a general assignment for the benefit of its creditors;
- is placed in receivership;
- otherwise petitions a state or federal court for protection from its creditors; or
- allows its license to do business in Massachusetts to lapse or be revoked;
- then the CM shall, within 21 days of any such action listed above, provide the City of Worcester with new performance and payment bonds as described in Paragraph A above. Such bonds shall be provided solely at the CM's expense.

## **2. Subcontractor Bonds**

**A.** If the CM provided in its Guaranteed Maximum Price or other Proposal, that any or all subcontractors shall provide the CM with payment and performance bonds for the full amount of their respective Subcontracts, then the costs for said bonds shall be the responsibility of the CM. Irrespective of whether the CM requests payment and performance bonds from their respective Subcontractors, the CM understands that if the Subcontractor defaults or is terminated, the CM shall have full responsibility for all costs and expenses related to said default or termination.

**B.** If the CM provided in its General Bid that Subcontractors shall provide bonds, and subsequently waives the requirement, the CM shall give the City of Worcester a written certification that the CM understands that if the Subcontractor defaults or is terminated, the CM shall have full responsibility for all costs and expenses related to said default or termination.

## **ARTICLE XVII** **TERMINATION OF CONTRACT**

### **1. Termination for Cause**

**A.** the City of Worcester may without prejudice to any other right or remedy deem this Contract terminated for cause if any of the following defaults shall occur and not be cured within three (3) days after the giving of written notice thereof by the City of Worcester to the CM and any surety that has given bonds in connection with this Contract:

- (1) The CM has filed a petition, or a petition has been filed against the CM with its consent, under any federal or state law concerning bankruptcy, reorganization, insolvency or relief from creditors, or if such a petition is filed against the CM without its consent and is not dismissed within sixty (60) days; or if the CM is generally not paying its debts as they become due; or if the CM becomes insolvent; or if the CM consents to the appointment of a receiver, trustee, liquidate, custodian or the like of the CM or of all or any substantial portion of its assets and such appointment or possession is not terminated within sixty (60) days; or if the CM makes an assignment for the benefit of creditors;
- (2) The CM refuses or fails, except in cases for which extension of time is provided under this Contract's express terms, to supply enough properly skilled workers or

proper materials to perform its obligations under this Contract, or the City of Worcester has determined that the rate of progress required for the timely completion of the Work is not being met;

- (3) The CM fails to make prompt payment to Subcontractors or for materials, equipment, or labor;
- (4) All or a part of the Work has been abandoned;
- (5) The CM has sublet or assigned all or any portion of the Work, the Contract, or claims thereunder, without the prior written consent of the Owner, except as expressly permitted in this Contract;
- (6) The CM has failed to comply with Laws;
- (7) The CM fails to maintain, or provide to the City of Worcester evidence of the insurance or bonds required by this Contract, or
- (8) The CM has failed to perform the Work or any portion thereof as required by this Contract or has otherwise breached any material provision of this Contract.

**B.** the City of Worcester shall give the CM and any surety notice of such termination for cause, but the giving of notice of such termination shall not be a condition precedent or subsequent to the termination's effectiveness. In the event of such termination, and without limiting any other available remedies, the City of Worcester may, at its option:

- (1) hold the CM and its sureties liable in damages for a breach of Contract;
- (2) notify the CM to discontinue all work, or any part thereof, and the CM shall discontinue all work, or any part thereof, as the Owner may designate;
- (3) complete the Work, or any part thereof, and charge the expense of completing the Work or part thereof, to the CM;
- (4) require the surety or sureties to complete the Work and perform all of the CM's obligations under this Contract.
- (5) take such other lawful action as is deemed by the City of Worcester to be in the best interest of the Commonwealth.

If the City of Worcester elects to complete all or any portion of the Work as specified in (3) above, it may take possession of all materials, equipment, tools, machinery, implements at or near the Site owned by the CM and finish the Work at the CM's expense by whatever means the City of Worcester may deem expedient; and the CM shall cooperate at its expense in the orderly transfer of the same to a new contractor or to the City of Worcester as directed by the City of Worcester. In such case the City of Worcester shall not make any further payments to the CM until the Work is completely finished. The Owner shall not be liable for any depreciation, loss or damage to said materials, machinery, implements or tools during said use and the CM shall be solely responsible for their removal from the Site after the Owner has no further use for them. Unless so removed within fifteen days after notice to the CM to do so, they may be sold at public auction, after publication of notice thereof at least twice in any newspaper published in the county where the Work is being performed, and the proceeds credited to the CM's account; or they may, at the option of the City of Worcester, be stored at the CM's expense subject to a lien for the storage charges.

**C.** Damages and expenses incurred under paragraph B above shall include, but not be limited to, costs for the Designer's extra services required, in the opinion of the City of Worcester, to successfully inspect and administer the construction contract through final completion of the Work.

D. Expenses charged under paragraph B above may be deducted and paid by the City of Worcester out of any moneys then due or to become due the CM under this Contract.

E. All sums damages, and expenses incurred by the Owner to complete the Work shall be charged to the CM. In case the damages and expenses charged are less than the sum that would have been payable under this Contract if the same had been completed by the CM, the CM shall be entitled to receive the difference. In case such expenses shall exceed the said sum, the CM shall pay the amount of the excess to the Owner.

## **2. Termination for Convenience**

A. the City of Worcester may terminate this Contract for convenience even though the CM is not in default by giving notice to the CM specifying in said notice the date of termination.

B. In case of such termination without cause, the CM shall be paid:

(1) all sums due and owing under this Contract through the date of termination, including any retainage withheld to the date of termination, less any amount which the City of Worcester determines is necessary to correct or complete the Work performed to the date of termination; plus (2) a reasonable sum to cover the expenses which CM would not have incurred but for the early termination of the Contract, such as demobilization of the work force, restocking charges, termination fees payable to Subcontractors.

C. Lost profits shall not be payable. The payment provided in paragraph B above shall be considered to fully compensate the CM for all claims and expenses and those of any consultants, Subcontractors, and suppliers, directly or indirectly attributable to the termination.

## **3. CM's Duties upon Termination for Convenience**

Upon termination of this Contract for convenience as provided in Section 2 of this Article, the CM shall: (1) stop the Work; (2) stop placing orders and Subcontracts in connection with this Contract; (3) cancel all existing orders and Subcontracts; (4) surrender the Site to the City of Worcester in a safe condition; (5) transfer to the City of Worcester all materials, supplies, work in process, appliances, facilities, equipment and machinery of this Contract, and all plans, Drawings, Specifications and other information and documents used in connection with this Contract.

# **ARTICLE XVIII** **MISCELLANEOUS PROVISIONS**

## **1. No Assignment by CM**

The CM shall not assign by power of attorney or otherwise, or sublet or subcontract, the Work or any part thereof, without the previous written consent of the City of Worcester and shall not, either legally or equitably, assign any of the moneys payable under this Contract, or CM's claims hereunder, unless with the like consent of the City of Worcester, whether said assignment is made before, at the time of, or after the execution of the Contract. The CM shall remain responsible for satisfactory performance of all Work sublet or assigned complying with all applicable requirements of the Contract. Consent of the City of Worcester shall not be deemed to constitute a representation or waiver of any right hereunder by the City of Worcester as to the qualifications or the responsibility of the CM or Subcontractor(s).

## **2. Non-Appropriation**

The Commonwealth certifies that at the time of the execution of this Contract, sufficient appropriations exist and shall be encumbered to fund the Contract Price. Payments are subject to appropriation and shall be made only for work performed in accordance with the terms of this Contract. The CM shall not be obligated to perform, and shall not perform, work outside the scope of this Contract without an appropriate amendment to this Contract, and a sufficient appropriation(s) to support such additional work. The Commonwealth may immediately terminate or suspend this Contract in the event that the appropriation(s) funding this Contract is eliminated or reduced to an amount which will be insufficient to support anticipated future obligations under this Contract. Such termination shall be deemed a termination for convenience subject to the provisions of paragraph 2 of Article XVII of this Contract.

**3. Claims by Others Not Valid**

No person other than the CM and the surety on any bond given pursuant to the terms of this Contract shall acquire any interest in this Contract or any claim against the City of Worcester hereunder, and no claim by any other person shall be valid except as provided in M.G.L. c. 30, s. 39F of the General Laws.

**4. No Personal Liability of Public Officials**

No public official, employee, or agent of the City of Worcester shall have any personal liability for the obligations of the City of Worcester set forth in this Contract.

**5. Severability**

The provisions of this Contract are severable, and if any of these provisions shall be held unconstitutional or unenforceable by any court of competent jurisdiction, the decision of such court shall not affect or impair any of the other provisions of this Contract.

**6. Choice of Laws**

This Contract shall be governed by the laws of the Commonwealth of Massachusetts for all purposes, without regard to its laws on choice of law. All proceedings under this Contract or related to the Project shall be brought in the courts of the Commonwealth of Massachusetts.

**7. Standard Forms**

Unless directed otherwise in writing by the City of Worcester, CM shall use the standard forms in use by the Division of Capital Asset Management and Maintenance appearing in Appendix E to these General Conditions of the Contract.

**8. No Waiver of Subsequent Breach**

No waiver of any breach or obligation of this Contract shall constitute a waiver of any other or subsequent breach or obligation.

**9. Remedies Cumulative**

All remedies of the City of Worcester provided in this Contract shall be construed as cumulative and may be exercised simultaneously or in any order as determined by the

City of Worcester in its sole discretion. the City of Worcester shall also be entitled as of right to specific performance and equitable relief including the right to an injunction against any breach of any of the provisions of this Contract

**10. Notices**

Notices to the CM shall be deemed given when hand delivered to the CM's temporary field office at or near the Site, or when deposited in the U.S. mail addressed to the CM at the CM's address specified in the Owner-CM Agreement, or when delivered by courier to either location. Unless otherwise specified in writing by the City of Worcester, notices and deliveries to the City of Worcester shall be effective only when delivered to the City of Worcester at the address specified in the Owner-CM Agreement and date-stamped at the reception desk or for which a receipt has been signed by the agent or employee designated by the City of Worcester to receive official notices.

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

## **APPENDIX A**

The following provisions form Article XII of the General Conditions of the Contract between the City of Worcester and the Construction Manager.

### **EQUAL EMPLOYMENT OPPORTUNITY, NON-DISCRIMINATION AND AFFIRMATIVE ACTION PROGRAM**

#### **1. Compliance Generally**

For purpose of this Article, "minority" refers to Asians, Blacks, Western Hemisphere Hispanics, Native Americans, and Cape Verdeans; "Commission" refers to the Massachusetts Commission Against Discrimination. During the performance of this Contract, the Construction Manager and all of its Subcontractors (hereinafter collectively referred to as the Contractor) shall comply with all applicable equal employment opportunity, non-discrimination and affirmative action requirements, including but not limited to the following:

#### **2. Non-Discrimination and Affirmative Action**

**A.** The Contractor shall not discriminate against any employee or applicant for employment because of race, color, religious creed, national origin, age, handicap, sexual orientation, or sex. The aforesaid provision shall include, but not be limited to, the following: employment upgrading, demotion or transfer; recruitment advertising; recruitment layoff; termination; rates of pay or other forms of compensation; conditions or privileges of employment; and selection for apprenticeship. The Contractor shall comply with the provisions of M.G.L. c. 151B and all other applicable anti-discrimination and equal opportunity laws.

**B.** The Contractor shall comply with the provisions of Executive Order No. 246 entitled Revoking and Superseding Executive Orders Numbers 143 and 150, with respect to affirmative action programs for handicapped individuals, which is herein incorporated by reference and made a part of this Contract.

**C.** In connection with the performance of the Work, the Contractor shall undertake in good faith affirmative action measures designed to eliminate any discriminatory barriers in the terms and conditions of employment on the grounds of race, color, religious creed, national origin, age, sexual orientation, or sex, and to eliminate and remedy any effects of such discrimination in the past. Such affirmative action shall entail positive and aggressive measures to ensure equal opportunity in the areas of hiring, upgrading, demotion or transfer, recruitment, layoff or termination, rate of compensation, and in-service or apprenticeship training programs. This affirmative action shall include all action required to guarantee equal employment opportunity for all persons, regardless of race, color, religious creed, national origin, age, sexual orientation, or sex. A purpose of this provision is to ensure to the fullest extent possible an adequate supply of skilled tradesmen for future public construction projects.

**D.** If the Contractor shall use any subcontractor on any work performed under this Contract, the Contractor shall take affirmative steps to negotiate with qualified minority and women subcontractors. These affirmative steps shall cover both pre-bid and post-bid periods. It shall include notification to the State Office of Minority and Women Business Assistance or its designee, while bids are in preparation, of all products, work or services for which the Contractor intends to negotiate bids. In all solicitations either by competitive bidding or negotiation made by the Contractor either for work to be performed under a subcontract or for the procurement of materials or equipment, each potential subcontractor or supplier shall be notified in writing by the Contractor of the Contractor's obligations under this Contract relative to non-discrimination and affirmative action.

**E.** As part of its obligation of remedial action under this Article, the Contractor shall maintain on this project not less than the percent ratio set forth in the Owner – Construction Manager Agreement of minority employee worker hours to total worker hours in each job category including but not limited to bricklayers, carpenters, cement masons, electricians, ironworkers, operating engineers, and those "classes of work" enumerated in M.G. L. c. 149, s. 44F.

F. In the hiring of minority journeypersons, apprentices, trainees and advanced trainees, the Contractor shall rely on referrals from a multi-employer affirmative action program approved by the Commission, traditional referral methods utilized by the construction industry, and referrals from agencies, not more than three in number at any one time, designated by the City of Worcester.

### **3. Liaison Committee. Reports and Records**

A. At the option of the City of Worcester there may be established for the term of this Contract a body to be known as the Liaison Committee. The Liaison Committee shall be composed of one representative each from the Awarding Authority, and such other representatives as may be designated by the City of Worcester. The Contractor (or his agent, if any, designated by him as the on-Site equal employment opportunity officer) shall recognize the Liaison Committee as an affirmative action body, and shall establish a continuing working relationship with the Liaison Committee, consulting with the Liaison Committee on all matters related to minority recruitment, referral, employment and training.

B. The Contractor shall prepare projected staffing tables on a quarterly basis. These shall be broken down into projections, by week, of workers required in each trade. Copies shall be furnished one week in advance of the commencement of the period covered, and also when updated, to the Awarding Authority. The Contractor shall prepare weekly reports in a form approved by the Awarding Authority of hours worked in each trade by each employee, identified as minority or non-minority. Copies of these shall be provided at the end of each such week to the Awarding Authority and to the Liaison Committee.

C. Records of employment referral orders, prepared by the Contractor, shall be made available to the Awarding Authority on request.

D. A designee of the Awarding Authority shall each have right to access to the Site.

E. The Contractor shall comply with the provisions of M.G.L. c. 151B as amended, of the Massachusetts General Laws, both of which are herein incorporated by reference and made a part of this Contract.

F. The Contractor shall provide all information and reports required by the Awarding Authority on forms and in accordance with instructions issued by either of them and will permit access to its facilities and any books, records, accounts and other sources of information which may be determined by the Awarding Authority to affect the employment of personnel. This provision shall apply only to information pertinent to the Owner's supplementary affirmative action Contract requirements. Where information required is in the exclusive possession of another who fails or refuses to furnish this information, the Contractor shall so certify to the Awarding Authority and shall set forth what efforts he has made to obtain the information.

### **4. Sanctions**

A. Whenever the Awarding Authority believes the Contractor or any Subcontractor may not be operating in compliance with the terms of this Article, the City of Worcester shall directly, or through its designated agent, conduct an appropriate investigation, and may confer with the parties, to determine if such Contractor is operating in compliance with the terms of this Article. If the City of Worcester finds the Contractor or any Subcontractor not in compliance, it may make a preliminary report on non-compliance, and notify such Contractor in writing of such steps as will in the judgment of the Commission or its agent bring such Contractor into compliance. In the event that such Contractor fails or refuses to fully perform such steps, the City of Worcester **may** make a final report of non-compliance, and recommend the imposition of one or more of the sanctions listed below. If, however, the City of Worcester believes the Contractor or any Subcontractor has taken or is taking every possible measure to achieve compliance, it shall not make a final report of non-compliance. Within fourteen days of the receipt of the recommendations, the Awarding Authority shall move to impose one or more of the following sanctions, as it may deem appropriate to attain full and effective enforcement:

- (1) The recovery by the Awarding Authority from the Contractor of 1/100 of 1% of the Contract award price or \$1,000 whichever sum is greater, in the nature of liquidated

damages or, if a Subcontractor is in non-compliance, the recovery by the Awarding Authority from the Contractor, to be assessed by the Contractor as a back charge against the subcontractor, of 1/10 of 1% of the sub-Contract Price, or \$400 whichever sum is greater, in the nature of liquidated damages, for each week that such party fails or refuses to comply;

- (2) The suspension of any payment or part thereof due under the Contract until such time as the Contractor or any subcontractor is able to demonstrate his compliance with the terms of the Contract;
- (3) The termination, or cancellation, of the Contract, in whole or in part, unless the Contractor or any Subcontractor is able to demonstrate within a specified time his compliance with the terms of the contract;
- (4) The denial to the Contractor or any subcontractor of the right to participate in any future contracts awarded by the Awarding Authority for a period of up to three years.

**B.** If at any time after the imposition of one or more of the above sanctions a Contractor is able to demonstrate that it is in compliance with this Article, the Contractor may request the Awarding Authority to suspend the sanctions conditionally, pending a final determination by the Commission as to whether the Contractor is in compliance. Upon final determination, the Awarding Authority, shall either lift the sanctions or reimpose them.

**C.** Sanctions recommended by the Commission and enumerated under Section A above shall not be imposed by the Awarding Authority except after an adjudicatory proceeding, as that term is used in M.G.L. c. 30A, has been conducted. No investigation by the City of Worcester or its agent shall be initiated without prior notice to the Contractor.

**D.** Notwithstanding the provisions of 4A-4C above, if the Awarding Authority determines after investigation that the Contractor or any Subcontractor is not in compliance with the terms of this Article, it may suspend any payment or portion thereof due under the Contract until the contractor demonstrates to the satisfaction of the Awarding Authority compliance with the terms of this Article. This temporary suspension of payments by the Awarding Authority is separate from the sanctions set forth in Section 4A-4C of this Article above, which are determined by MCAD and recommend to the Awarding Authority. Payment may be suspended only after the Contractor and any other interested party shall have been given the opportunity to present evidence in support of its position at an informal hearing held by the Awarding Authority, and the Awarding Authority has concluded upon review of all the evidence that such penalty is justified. Payment shall not be suspended if the Awarding Authority finds that the Contractor made its best efforts to comply with this Article, or that some other justifiable reason exists for waiving the provisions of this Article in whole or in part.

## ATTACHMENT A

### **PROCEDURE FOR PRE-ADVERTISING ADJUSTMENT OF MBE/WBE PARTICIPATION GOALS**

#### **A. Affirmative Marketing Participation Goals:**

The combined goals below were established by the Division of Capital Asset Management and Maintenance (DCAMM) and the Supplier Diversity Office (SDO) and require a reasonable representation of both MBE and WBE firms.

**Design Participation:** Combined MBE/WBE goal of (17.9%)  
**Construction Participation:** Combined MBE/WBE goal of (10.4%)

All documentation submitted in connection with MBE/WBE credit must be true, accurate and correct to the best of your knowledge. Your signature on any MBE/WBE goal-related document means that you have read and understand it. Any false claims for MBE/WBE credit are subject to the Massachusetts False Claims Act and any applicable civil or criminal penalties as determined by the Massachusetts Attorney General's office.<sup>1</sup>

#### **B. Criteria for Adjustment of Goals:**

An Awarding Authority may file a written request for the adjustment of participation goals with the Executive Director of the SDO prior to the advertising of the contract.<sup>2</sup> Factors that may be considered include any or all of the following:

- Actual availability of SDO certified Minority-Owned Business Enterprises (MBE) or Women-Owned Business Enterprises (WBE);
- The geographic location of the project;
- The scope of work of the project including the opportunities for sub-contracting and subdividing the work and other relevant factors; and
- The SDO, at the request of the awarding authority or any perspective bidder may agree to assist in MBE/WBE outreach. The SDO is not required nor obligated to do this. It is a complementary service provided, and one the SDO strongly suggests be taken advantage of.

#### **C. Project Thresholds:**

Participation Goals<sup>3</sup> can be adjusted by the Awarding Authority without filing a formal request with SDO if the total estimated construction or design cost is \$100,000 or less.

#### **D. Supporting Documentation for Design and Construction Projects will include, but are not limited to the following:**

1. Documents to support a reduction/waiver request should include a general description of the project, a copy of the detailed project estimates and the deadline for placement of project advertisement;
2. The reasons that the Awarding Authority or its representative is requesting a reduction/waiver of the MBE/WBE participation goals;
3. Documentation that there may be a lack of eligible MBE/WBEs to perform the design or construction contract work after reviewing the SDO Business Directory;
4. Documentation that all subcontracting opportunities were identified and made available to meet the MBE/WBE participation goals;
5. The Awarding Authority may also submit any other information supporting its request for adjustment of the MBE/WBE participation goals; and
6. All applicable sections of the **Massachusetts False Claims Act** as well as any related civil or criminal penalties as determined by the Massachusetts Attorney General are incorporated by reference into this document.<sup>4</sup>

#### **E. Request for Adjustment of Design and Construction Goals:**

1. Requests by an Awarding Authority for Adjustment of MBE/WBE Participation Goals must be submitted in writing no less than ten (10) working days before the deadline for placement of advertisements for the contract. Applications should be directed to the SDO Director of Construction Reform, One Ashburton Place, Room 1017, Boston, MA 02108 or by e-mail to: [John.B.Fitzpatrick@state.ma.us](mailto:John.B.Fitzpatrick@state.ma.us).
2. Requests for adjustments on Design and Construction Goals must be applied for separately and are not interchangeable. Participation credits for modular projects can be awarded under either the design or construction goals, but not both.
3. The written request for the reduction/waiver must include the reasons for it and all supporting documentation.
4. The SDO will provide a written response prior to the advertising deadline.

---

<sup>1</sup> See generally, MG.L. c.12, §§5A-5O, inclusive.

<sup>2</sup> In rare instances after advertising and before bidding based on new information you may request an adjustment post-advertisement. Any adjustment granted must be the subject of an Addendum.

<sup>3</sup> For state-assisted building projects.

<sup>4</sup> See generally, MG.L. c.12, §§5A-5O, inclusive.

## ATTACHMENT B

### **PROCEDURES FOR PRE-BID REDUCTION/WAIVER OF MBE/WBE PARTICIPATION GOALS**

#### **A. Affirmative Marketing Participation Goals:**

The combined goals below were established by the Division of Capital Asset Management and Maintenance (DCAMM) and the Supplier Diversity Office (SDO) and require a reasonable representation of both MBE and WBE firms.

**Design Participation:** Combined MBE/WBE goal of (17.9%);  
**Construction Participation:** Combined MBE/WBE goal of (10.4%)

All documentation submitted in connection with MBE/WBE credit must be true, accurate and correct to the best of your knowledge. Your signature on any MBE/WBE goal-related document means that you have read and understand it. Any false claims for MBE/WBE credit are subject to the Massachusetts False Claims Act and any applicable civil or criminal penalties as determined by the Massachusetts Attorney General's office. <sup>1</sup>

#### **B. Criteria for Adjustment of Goals:** <sup>2</sup>

Potential Bidders may request a written adjustment before bids are submitted. An awarding authority cannot grant an adjustment of goals. Only the SDO has the authority to do this. Written requests must demonstrate that there is no feasible way to meet established contract goals and that a "Diligent Good Faith Effort" was made to comply. The request for reduction/waiver will ultimately be decided by the SDO. Factors that may be considered include any or all of the following:

- Actual availability of certified Minority- and/or Women-Owned Business Enterprises (MBE/WBEs);
- The geographic location of the project;
- The scope of work of the project including the opportunities for sub-contracting and subdividing the work;
- Documentation that shows the Bidder attempted in a diligent good faith effort to fulfill contract goals and was unable to do so; and
- Other relevant factors;

Although the SDO is not obligated to do so, the SDO may agree to assist either an awarding authority or any potential bidder with its MBE/WBE outreach. **We strongly encourage you to use this service.**

#### **C. Required Supporting Documentation from Potential Construction Bidders:**

- Using the SDO Reduction/Waiver Request form, the Bidder must prove that notices were sent to certified firms.
- They must break down larger scopes of work into its smallest component parts so that the widest available pool of ready, willing and able certified MBE/WBE firms may participate;
- In the event that an individual scope of work was not made available to ready, willing and able certified firms in certain trade categories,<sup>3</sup> a bidder must explain why in writing. Follow up documentation such as phone logs, or e-mail may be required to determine with certainty whether the firms were interested in performing the work.
- Additional documentation of reasonable efforts on the part of the Bidder to assist a potential MBE/WBE firm may include items such as, but not limited to: (a) bonding, insurance, lines of credit or any other type of assistance; or (b) evidence that the Bidder placed advertisements in appropriate media and trade association publications.
- The Bidder shall also submit any other information reasonably requested by the Awarding Authority.

#### **D. Process for Requesting Waiver/Reduction of Construction Goals:**

Requests from prospective general Bidders to reduce or waive the MBE/WBE participation goals must be written. An awarding authority must receive such requests no later than **ten (10) working days** before the general bids are due. Requests submitted beyond this deadline will not be considered.

---

<sup>1</sup> See generally, MG.L.c.12, §§5A-5O, inclusive.

<sup>2</sup> Applies to waivers and reductions.

<sup>3</sup> Other than work performed by filed Sub-Bidders.

**ATTACHMENT C MODEL  
BIDDING INSTRUCTIONS**

**A. Affirmative Marketing Participation Goals:**

Each Municipality must enforce the current Affirmative Marketing Goals developed by the Division of Capital Asset Management and Maintenance (DCAMM) and Supplier Diversity Office (SDO) as follows:<sup>1</sup>

|                                    |   |
|------------------------------------|---|
| <b>Design Participation:</b>       | <b>Combined MBE/WBE goal of (17.9%)</b> |
| <b>Construction Participation:</b> | <b>Combined MBE/WBE goal of (10.4%)</b> |

All documentation submitted in connection with MBE/WBE credit must be true, accurate and correct to the best of your knowledge. Your signature on any MBE/WBE goal-related document means that you have read and understand it. Any false claims for MBE/WBE credit are subject to the Massachusetts False Claims Act and any applicable civil or criminal penalties as determined by the Massachusetts Attorney General's office.<sup>2</sup>

**A. MBE and WBE Participation Requirements:**

1. Compliance with the requirements of this Section is a pre-requisite for receiving a Contract Award. The Contractor must utilize a reasonable representation mix of both MBE and WBE firms whose collective participation either meets or exceeds the overall combined contract goal. Both MBE and WBE firms shall have an opportunity to work on public projects with a combined MBE/WBE goal.
2. Projects with a combined goal must include a reasonable representation of both MBE and WBE firms to meet or exceed the combined goal. Both categories must be reflected in the participation goals, e.g. bidders who meet the participation goals of one category, such as MBE, must still find WBE representation. Combined contract participation goals must be reported and tracked separately.
3. The MBE and WBE participation goals for this Contract are set forth above. The Awarding Authority reserves the right to accept and review written requests but does not have the authority to reduce or waive the MBE or WBE participation goals established for this contract. Waivers or reductions of MBE/WBE participation are contingent on the following: (a) MBE/WBE availability, (b) geographic location, (c) scope of work, (d) the percentage of work available for subcontracting to MBE/WBEs and/or (e) other relevant factors including documentation by General Bidder showing a **Diligent, Good Faith Effort** to secure commitments from MBE/WBE subcontractors. If these criteria are met, the Awarding Authority may submit the General Bidders request along with all the foregoing documentation to the Executive Director of the Supplier Diversity Office (SDO) for final determination.
4. All contracts shall provide MBE/WBE firms with contracting opportunities. If a bidder fails to make a subcontracting opportunity available to certified MBEs/WBEs, it must explain why in writing. The Bidder shall also demonstrate that, where commercially reasonable, subcontracts were divided into smaller scopes or tasks capable of being performed by MBE/WBEs.
5. A successful bidder must provide notice of: (a) each MBE/WBE solicited, and (b) each MBE/WBE listed in the SDO directory under the applicable trade category that was not solicited and reasons therefore. The Bidder shall also state the date that notices were mailed and provide a copy of the written notice(s) sent.
6. Reasonable follow up efforts include written notices sent to MBE/WBEs with telephone calls or personal visits in order to determine with certainty whether the MBE/WBEs were interested in performing the work. Phone logs or other documentation must be submitted.
7. A statement of the response received from each MBE/WBE solicited, including the reason for rejecting any MBE/WBE who submitted a bid or proposal may also be provided
8. If MBE/WBEs have difficulty obtaining bonding, insurance or lines of credit to participate in the project, prospective bidders must show reasonable efforts were made to assist MBE/WBEs to obtain bonding, insurance, or lines of credit.
9. Reasonable efforts may also include whether a Bidder placed advertisements in appropriate media and trade association publications announcing the Bidder's interest in obtaining bids or proposals from MBE/WBEs, and/or sent written notification to MBE/WBE economic development assistance agencies, trade groups and other organizations notifying them of the Contract and the work to be subcontracted by the Bidder to MBE/WBEs. The Bidder shall also submit any other information reasonably requested by the Awarding Authority to show that the Bidder has taken all possible reasonable steps to achieve the MBE/WBE participation goals.
10. If **filed Sub-Bids** are solicited for this Contract, requests to reduce or waive the MBE/WBE participation goals must be received by the Awarding Authority no later than ten (10) working days after the list of filed Sub-Bidders is sent by the Awarding Authority to persons who have taken out plans for the Contract. If there are no filed Sub-Bids solicited for this Contract, requests to reduce or waive the MBE/WBE participation goals for this Contract must be received by the Awarding Authority no later than ten (10) working days before the date set for the receipt of general Bids. **The Awarding Authority Will Not Consider Any Request To Reduce Or Waive The MBE/WBE Participation Goals For This Contract That Is Received After These Deadlines.**
11. Within five (5) working days after the opening of general Bids, the low Bidder shall submit the following documents to the Awarding Authority's Affirmative Marketing Construction Officer (AMCO): (a) a completed Schedule for Participation by MBE/WBE ("Schedule for Participation") in the form provided by the Awarding Authority showing MBE/WBE participation in amounts equal to or exceeding the MBE/WBE participation goals for this Contract, (b) a completed Letter of Intent in the form provided by the Awarding Authority for each MBE/WBE listed in the Schedule for Participation, and (c) the most recent SDO

<sup>1</sup> Periodically, goals may be changed or adjusted. Check the [SDO web site](#) for current MBE/WBE participation goals.

<sup>2</sup> See generally, MG.L. c.12, §§5A-5O, inclusive.

certification letter for each MBE/WBE listed in the Schedule of MBE/WBE Participation showing that the MBE/WBE is certified in the area of work for which it is listed on the Letter of Intent.

12. Each Letter of Intent shall describe the work to be performed by the MBE/WBE (the “ MBE/WBE ”) with enough specificity to allow an awarding authority to determine which specific items count for MBE/WBE participation credit. The Awarding Authority reserves the right to reject any Letter of Intent if the price to be paid for the MBE/WBE Work does not bear a reasonable relationship to the value of such work under the Contract.
13. Within five (5) working days after receipt of the Schedule for MBE/WBE Participation, Letters of Intent, and most recent SDO certification letter, the Awarding Authority shall review and either approve or disapprove the apparent low Bidder's submissions. If the apparent low Bidder has not submitted an appropriate Schedule for MBE/WBE Participation and appropriate Letters of Intent and SDO most recent certification letter establishing that the MBE/WBE participation goal for the project will be met, the apparent low Bidder will be considered ineligible for Award of the Contract and the Awarding Authority will Award the Contract to the second lowest eligible and responsible Bidder, subject to said Bidder's compliance with these conditions. If funds are insufficient to award to the second lowest Bidder, the project may have to be re-bid.
14. General Conditions of the Contract require the Contractor to submit, within thirty (30) days of the Contract Date, copies of current certification letters for all subcontractors, signed subcontracts with all subcontractors or a purchase order or invoice from each material supplier and/or manufacturer listed on the Schedule for MBE/WBE Participation.
15. A filed sub-Bidder is not required to submit a Schedule of MBE/WBE Participation with its Bid. It may submit a Letter of Intent with its Bid if it is a SDO certified MBE/ WBE. If a filed sub-Bidder intends to sub-subcontract work to a SDO certified MBE/WBE, and the awarding authority permits limited sub-sub-contracting for purposes of MBE/WBE participation, and the filed sub-Bidder wishes that sub-subcontract to be credited toward the participation goals for this Contract, the filed sub-Bidder should submit a Letter of Intent from that MBE/WBE with its Bid.

**ATTACHMENT D     MODEL**  
**CONTRACT INSTRUCTIONS FOR**  
**MUNICIPAL CONTRACTS AND STATE ASSISTED BUILDING PROJECTS**

**A. Affirmative Marketing Participation Goals:**

The combined goals below were established by the Division of Capital Asset Management and Maintenance (DCAMM) and the Supplier Diversity Office (SDO) and require a reasonable representation of both MBE and WBE firms:

|                                    |   |
|------------------------------------|---|
| <b>Design Participation:</b>       | <b>Combined MBE/WBE goal of (17.9%)</b> |
| <b>Construction Participation:</b> | <b>Combined MBE/WBE goal of (10.4%)</b> |

All documentation submitted in connection with MBE/WBE credit must be true, accurate and correct to the best of your knowledge. Your signature on any MBE/WBE goal-related document means that you have read and understand it. Any false claims for MBE/WBE credit are subject to the Massachusetts False Claims Act and any applicable civil or criminal penalties as determined by the Massachusetts Attorney General's Office.<sup>1</sup>

**B. MBE/WBE Participation Credit:**

1. MBE and WBE participation goals are not interchangeable.
2. Participation credit is only given for actual contract work performed by currently certified MBE, WBE or M/WBE firm.
3. If the firm awarded the contract is itself currently certified as a MBE/WBE, 100% participation credit will be given for the work performed.
4. If the prime contractor is not a certified firm, it shall only receive credit for the portion of work completed by the certified firm.
5. MBE/WBE participation credit will be given to a supplier **only** if they are regularly engaged in sales of equipment or supplies to the construction industry from an established place of businesses and bear the risk of loss for product sold prior to delivery to a customer.
6. A contractor can count only 10% of the contract price towards an MBE or WBE goal on DCAMM projects.

**C. Establishing MBE/WBE Status:**

1. A business will be eligible for participation credit only if it has been certified by the Supplier Diversity Office (SDO) as a minority business enterprise (MBE) or a woman business enterprise (WBE).
2. Certification as a MBE/WBE **by any other agency other than SDO does not** confer the status to the firm for the purposes of contract participation credit.
3. Participation credit shall only be given to firms which are certified at the time of contract award
4. A firm currently being initially reviewed as part of the certification process cannot be used by a contractor towards MBE/WBE participation credit.

**D. Performance of Contract Work by MBE/WBEs:**

1. Only currently certified MBE/WBE firms count towards participation goals. If during the course of a contract, a SDO certified MBE/WBE firm is decertified their participation credit will be counted up until the date of decertification
2. An awarding authority will not grant MBE/WBE participation credit unless the contract work is actually completed by a certified SDO MBE/WBE firm. No credit will be given for work done by others or for work not on a MBE/WBE schedule of participation.
3. Once a letter of intent and a MBE/WBE letter of participation are approved, a contractor may not perform this same work using its own staff without the prior express written prior approval of the Awarding Authority.
4. The Contractor shall monitor the performance of MBE/WBE Work to ensure that each scheduled MBE/WBE performs its own work with its own workforce.

---

<sup>1</sup> See generally, MG.L. c. 12, §§5A-5O, inclusive.

5. The Contractor and each MBE/WBE subcontractor shall provide the Awarding Authority with all information and documentation necessary to ascertain whether or not an MBE/WBE has performed its own MBE/WBE Work with its own personnel, tools and equipment.
6. Failure to submit documentation to the Awarding Authority shall establish conclusively for the purpose of giving MBE/WBE participation credit under this Contract that such MBE/WBE did not perform such work.

**E. Notification of Changes in MBE/WBE Work:**

If during the performance of a contract, a contractor determines or has reason to believe that:

1. A scheduled MBE/WBE is unable or unwilling to perform its MBE/WBE Work;
2. There has been or will be a change in any MBE/WBE Work; or
3. That the Contractor will be unable to meet the MBE/WBE participation goal(s) for the Contract for any reason.

Then he/she shall immediately notify the Awarding Authority in writing. Any notice of a change in MBE/WBE Work shall include a revised Schedule of MBE/WBE Participation, and additional or amended Letters of Intent and related subcontracts, as needed.

**F. Good Faith Efforts Needed to Support Changes/Reduction of MBE/WBE Participation Goals:**

If there is a change or reduction in any MBE/WBE Work which will result in the Contractor failing to meet the MBE/WBE participation goal(s), then he/she shall undertake a diligent, good faith effort to make up the shortfall as follows:

1. The Contractor shall identify all items of the Work remaining to be performed under the Contract that they made available for subcontracting to MBE/WBEs along with that which wasn't along with reasons why.
2. The Contractor shall send written notices to all MBE/WBEs ready, willing and able to perform such work. The contractor will provide the Awarding Authority with documentation identifying: (i) each MBE/WBE solicited, and (ii) each MBE/WBE listed in the SDO directory under the applicable trade category that was not solicited and the reasons why. The Contractor shall also advise the Awarding Authority of the dates that notices were sent and provide a copy of the written notice(s) sent.
3. The Contractor shall make reasonable efforts to follow up on the written notices, including telephone calls or personal visits in order to determine with certainty whether the MBE/WBEs were interested in performing the work. Phone logs or other documentation must be submitted to the Awarding Authority upon request.
4. The Contractor shall make documented reasonable efforts to assist MBE/WBEs that need assistance in obtaining insurance, bonds, or lines of credit in order to perform work under the Contract. Supporting documentation will be provided to the Awarding Authority upon request.
5. The Contractor shall provide the Awarding Authority with a statement of the response received from each MBE/WBE solicited, including the reason for rejecting any MBE/WBE who submitted a proposal.
6. The Contractor shall take any additional measures including, without limitation, placing advertisements in appropriate media and trade association publications announcing the Contractor's interest in obtaining proposals from MBE/WBEs, and/or sending written notification to MBE/WBE economic development assistance agencies, trade groups and other organizations notifying them of the project and of the work available to be subcontracted by the Contractor to MBE/WBEs.

If the Contractor is unable to meet the MBE/WBE participation goals for this Contract after complying fully with each of the above requirements and is otherwise in full compliance with the terms of this provision, the Awarding Authority may reduce the MBE/WBE participation goals for this Contract to the extent that such goals cannot be achieved.

**G. Suspension of Payment and/or Performance for Noncompliance:**

If a reduction of MBE/WBE goals was given but sufficient good faith efforts (see above) were not documented, then after proper written notice, the Awarding Authority has the discretion to:

1. Suspend payment to the Contractor of an amount equal to the value of the work which was to have been performed by an MBE/WBE pursuant to the Contractor's Schedule of MBE/WBE Participation but which was not so performed, in order to ensure that sufficient Contract funds will be available if liquidated damages are assessed;
2. Suspend the Contractor's performance of this Contract in whole or in part.

Notice Required Prior to Suspension: The Awarding Authority shall give the Contractor prompt written notice of any action taken and shall give the Contractor and any other interested party, including any MBE/WBEs, an opportunity to present evidence to it that the Contractor is in compliance with the requirements, or that there is some justifiable reason for waiving the requirements in whole or in part. The Awarding Authority may invite SDO to participate in these proceedings

If, based on a totality of the circumstances, it can be shown that all reasonable steps were taken and that the Contractor is in full compliance with the requirements of this Attachment, or that the Contractor has met or will meet the MBE/WBE participation goals for this Contract, the Awarding Authority shall release any funds withheld and lift any related suspension of the Contractor's performance.

#### **H. Liquidated Damages; Termination**

If payment by the Awarding Authority or performance by the Contractor is suspended, and if the breach cannot be cured or that same contractor fails to take all reasonable and immediate efforts to comply with the MBE/WBE participation goals set forth in this Contract, subject to the notice provisions above:

1. The Awarding Authority may terminate this Contract; or
2. The Awarding Authority may retain from final payment to the Contractor, as liquidated damages, an amount equal to the difference between:
  - a. The total of the MBE/WBE participation goals set forth in this Contract, and;
  - b. The amount of MBE/WBE participation credit earned by the Contractor for MBE/WBE Work performed under this Contract minus the cost to restore the loss to the Awarding Authority.
3. Any liquidated damages will be assessed separately for MBE and WBE participation.

Discretionary Option to Review Any Additional Mitigating Evidence Prior to Final Decision: Before exercising its rights and remedies, the Awarding Authority may but is not required to give the Contractor and any other interested party a final opportunity to present evidence that the Contractor is in compliance with the requirements or that there is some justifiable reason for waiving the requirements of this Attachment in whole or in part. The Awarding Authority may invite SDO to participate in these proceedings.

SUPPLIER DIVERSITY OFFICE  
CONSTRUCTION REFORM PROGRAM  
MUNICIPALITIES GENERAL GUIDELINES

The Supplier Diversity Office (SDO) issues the Construction Reform Program guidelines on the [Municipality Guidelines](#) webpage in accordance with the statutory standards set forth in [Chapter 193 of the Acts of 2004](#), which includes a municipal affirmative marketing program for currently certified firms in the Commonwealth of Massachusetts.

THE BIDDING AND CONTRACT INSTRUCTIONS ON THE [MUNICIPALITY GUIDELINES](#) WEBPAGE MUST BE INCORPORATED INTO CONTRACT DOCUMENTS, AS REQUIRED BY CHAPTER 193 OF THE ACTS OF 2004.

Municipalities must incorporate Minority Business Enterprise (MBE) and Women Business Enterprise (WBE) goals into both their design and construction procurement for municipal contracts for the construction, reconstruction, alteration, remodeling, repair or demolition of any public building by any city or town that includes funding provided by the Commonwealth such as legislative appropriations, grant awards, reimbursements and municipal commitments to use state funds.

Only firms which are currently MBE or WBE certified by the Supplier Diversity Office (SDO) at the date of contract award will be counted for Construction Reform program purposes. The firm's current SDO state certification letter shall serve as the sole and exclusive proof of state certification.

Certification as a Disadvantaged Business Enterprise (DBE), certification as an MBE/WBE by any agency other than SDO, or submission of an application to SDO for certification as an MBE/WBE shall not confer MBE or WBE status on a firm for purposes of construction reform program participation credit.

**Affirmative Marketing Participation Goals:**

The combined goals below were established by the Division of Capital Asset Management and Maintenance (DCAMM) and the Supplier Diversity Office (SDO) and require a reasonable representation of both MBE and WBE firms:

|                             |                                   |
|-----------------------------|-----------------------------------|
| Design Participation:       | Combined MBE/WBE goal of (17.9%)  |
| Construction Participation: | Combined MBE/WBE goal of (10.4%)» |

Documentation submitted with your signature means that you swear under the pains and penalties of perjury that you have read and understand it. Any false claims for MBE/WBE credit are subject to the Massachusetts False Claims Act and any applicable civil or criminal penalties as determined by the Massachusetts Attorney General's office.'

## APPENDIX C

### PROCEDURES FOR AWARD OF SUBCONTRACTS

Pursuant to M.G.L. c.149A, as contained in Chapter 193 of the Acts of 2004, the City of Worcester is required to develop a process consistent with legal requirements for the selection of subcontractors for construction manager at risk projects. This process is described in these Procedures for Award of Subcontracts (the “Procedures”). The Procedures are divided into three parts. The first part describes the prequalification and procurement of “Trade Contractors”, which, for the purposes of the Procedures, shall mean the subcontractors performing work in trade categories covered by Section 44F of Chapter 149. The second part describes the prequalification and procurement of all subcontractors that are not Trade Contractors. The third part addresses additional procurement matters.

For the purposes of the Procedures, the term Project shall mean the specific construction project to which the Procedures are being applied; the term CM shall mean the construction manager at risk selected by the City of Worcester to construct the Project; the term Designer shall mean the firm (and its subconsultants) selected by the City of Worcester to design; the term Project Manager shall refer to the City of Worcester staff serving as Project Manager on the project; and the term Applicant shall mean any firm that submits a response pursuant to the Procedures.

#### I. TRADE CONTRACTORS

##### A. Applicability of Procedures

1. Subcontracts Subject to Trade Contract Procedures. The procedures set forth in Sections 2 and 3 below shall govern the award of subcontracts by the CM for the furnishing of labor, materials, and equipment in the performance of the categories of work listed below whenever the estimated construction cost of such category of work exceeds \$20,000:

|   |   |
|---|---|
| Roofing and Flashing                      | Glass and Glazing   |
| Metal windows                             | Painting  |
| Waterproofing, Damp-proofing and Caulking | Plumbing  |
| Miscellaneous and Ornamental Iron         | Heating, Ventilating, and Air Conditioning                |
| Lathing and Plastering;                   | Electrical work   |
| Acoustical Tile                           | Elevators   |
| Marble                                    | Masonry work  |
| Tile                                      |   |
| Terrazzo                                  | Any other categories of work selected by the              |
| Resilient Floors                          | City of Worcester for designation as Trade Contract work. |

The subcontractors performing these trades are referred to throughout the Contract Documents as “Trade Contractor(s).” Contracts for work in these categories of work where the estimated cost of such work exceeds \$20,000 are referred to as “trade contracts.”

##### B. Qualification of Trade Contractors

1. Prequalification Committee. DCAM shall establish a prequalification committee (“the Prequalification Committee”) consisting of four members. The members shall include two employees of the city’s DPW&P with management roles in the construction of large buildings, a representative of the Designer, and a

representative of the CM. The Commissioner of DPW&P shall designate the Chairperson of the Prequalification Committee. An alternate may be appointed for each member of the Prequalification Committee to serve on occasions when the regular member cannot be available. Both the representative of the Designer and CM serving on the Prequalification Committee, and the alternates representing the Designer and CM shall be subject to the City of Worcester's approval. The Prequalification Committee shall conduct the prequalification of trade contractors as set forth in Sections 2 and 3 of the Procedures. The CM will provide assistance to the Prequalification Committee in the exercise of its responsibilities under the Procedures, including assistance from CM staff.

Three members of the Prequalification Committee shall constitute a quorum for the purposes of conducting the Prequalification Committee's official business. The Commissioner or his designee may join any meeting of the Prequalification Committee as a voting member in order to achieve a quorum, if in the Commissioner's judgment the action scheduled for such meeting cannot be postponed without adverse consequences to the Project.

Request for Qualifications. The City of Worcester shall issue a request for qualifications ("RFQ") for each category of work listed in Section 1.1 if such work is required on the Project. The RFQ shall be placed on the Comm-PASS web site; advertised in a newspaper of general circulation in the area of the Project and in the *Central Register* established under Massachusetts General Laws, Chapter 9, Section 20, and in such additional media as DCAM and the Prequalification Committee may deem appropriate at least fourteen (14) calendar days before the deadline for Applicants to submit a response to the RFQ by submission of a Statement of Qualifications ("SOQ"). All interested Trade Contractors shall be eligible to respond to the RFQ and participate in the prequalification process. The CM firm may submit its qualifications to bid on trade contract work provided that the CM customarily performs the work for which it submits its qualifications and does so with employees on its own payroll, and provided that the CM meets all the requirements of the selection process. The RFQ shall be prepared by the City of Worcester in a form consistent with the requirements of M.G.L. c. 149A and in consultation with the Prequalification Committee and the CM. The RFQ shall contain a form or forms (individually or collectively, the City of Worcester "Statement of Qualifications" or "SOQ") requiring the information necessary for the Prequalification Committee to determine if the Applicant is qualified to perform the category of work for which it seeks prequalification on the Project. City of Worcester's Standard form RFQ and SOQ will be provided by the City of Worcester and must be utilized as the RFQ and SOQ for the Project. The RFQ shall include, at a minimum:

- a. the date, time, and place for submission;
- b. relevant information about the project and the bidding process;
- c. the specific criteria for trade contractor prequalification and selection;
- d. a statement indicating that the RFQ will be used to prequalify trade contractors that will be invited to submit a bid; and
- e. that the responders' names are to be posted, but that there shall be no public opening of responses.

Prequalification Criteria. The Prequalification Committee shall evaluate the information submitted by each Applicant on its the City of Worcester Statement of

Qualifications, the results of reference checks performed by the City of Worcester and/or the CM, and any other information required or obtained by the Prequalification Committee. The following subparagraphs enumerate the legally required categories to be used by the Prequalification Committee in evaluating the Applicants, the subcategories of information within each category, and the specific point allocation required for prequalification within each category. Applicants must achieve an overall score of 70 or greater and must also achieve the minimum required points within each category in order to be deemed prequalified. Applicants that do not achieve both the minimum scores within each category and do not achieve an overall score of 70 or above shall not be deemed prequalified.

- a. Management Experience (50 points; minimum of 25 required for approval)
  - i) Business owners - The name, title, years with firm of the owner(s) of the business (1 Point)
  - ii) Management personnel - The names, title, education and construction experience, years with firm, and list of projects completed by all management personnel. (25 Points)
  - iii) Similar project experience - The project name(s), description, description of scope, original trade contract sum, final trade contract sum with explanation, and date completed of similar projects. (10 Points)
  - iv) Terminations – A list of any projects on which the trade contractor was terminated or failed to complete the work. (3 Points)
  - v) Lawsuits – A list of commercial lawsuits in which the trade contractor is a defendant or defendant-in-counterclaim with regard to construction contracts within the last 3 years. The lawsuits shall not include any actions that primarily involve personal injury or workers' compensation claims, or where the sole cause of action involves the trade contractor's exercise of its rights for direct payment under the law. (3 Points)
  - vi) Safety record – The three-year history of the trade contractor's workers' compensation experience modifier. (8 Points)
- b. References (30 points; minimum of 15 required for approval)
  - i) Client references - for all projects listed in clause (iii) of Management experience above, including the project name, client's name, address, telephone and fax number, and contact person. (24 Points)
  - ii) Credit references - .A minimum of five credit references, including telephone and fax number of contact person from key suppliers, vendors and banks. (3 Points)
  - iii) Public project record – A list of all completed public building construction projects as defined in section 44A of chapter 149 during the past three years with client's name, address, telephone and fax number and contact person. (3 Points)
- c. Capacity to Complete Projects – (20 points; minimum of 10 required for approval)
  - i) Annual revenue for prior three fiscal years. There shall be no requirement for submission of financial statements. (10 Points)
  - ii) Revenue under contract for next three fiscal years. (10 Points)
- d. Commitment Letter – (mandatory no points assigned)

Mandatory commitment letters from surety companies or authorized agents stating that payment and performance bonds at 110% of the estimated trade contract value will be provided to the applicant if it is the successful bidder. The surety company providing the commitment letter must be licensed to do business in the Commonwealth and appear on the United States Treasury Department Circular 570.

e. Certificate of Eligibility – (mandatory, no points assigned)

All SOQs submitted after January 1, 2006 must include a DCAM issued certificate of eligibility listing the Applicant as currently certified as a subcontractor in the scope of work for which the Applicant is submitting its SOQ.

f. Update Statement – (mandatory, no points assigned)

All SOQs submitted after January 1, 2006 must include a fully completed and current Update Statement prepared by the Applicant.

Applicants that are certified by the Massachusetts State Office of Minority and Women Business Enterprise (“SOMWBA”) as either a Minority Business Enterprise, a Women Business Enterprise or a Minority/Women Business Enterprise and provide documentation of current SOMWBA certification with their SOQ will have an additional 5 points added to their overall score.

If the Applicant is a joint venture, the Applicant must submit a copy of the joint venture agreement, signed by each member, and the joint venture agreement must clearly identify, for each member of the joint venture, such member’s proportionate share or interest in the financial or other benefits, risks or liabilities of the venture (“joint venture interest”). One member of the joint venture must have a joint venture interest greater than fifty (50) percent (“the Lead Venturer”). The requirements for prequalification in 2.3 a-f above shall be met by each member of the joint venture; and the bonding requirements of 2.3 d above shall be met by the Lead Venturer or by the joint venture as an entity. A joint venture prequalified by the Prequalification Committee must obtain a Certificate of Eligibility from the City of Worcester prior to the time bids are filed and must submit the Joint Venture’s Certificate of Eligibility with its bid.

Joint ventures must be submitted for consideration by the Prequalification Committee.

Following the deadline for submission of SOQs for a specific category of work, joint ventures for that category of work which were not submitted to the Prequalification Committee may not bid on that category of work, except that two firms both of whom were independently prequalified by the Prequalification Committee for that category of work, may form a joint venture to bid that category of work without further consideration by the Prequalification Committee provided the Joint Venture has been the City of Worcester Certified prior to submitting its bid and submits the Joint Venture’s Certificate of Eligibility with its bid.

Deliberations of the Prequalification Committee. The Prequalification Committee shall consider each SOQ submitted based on the criteria set forth in Paragraph 2.3 above.

The Prequalification Committee shall require that all mandatory submissions are submitted by the Applicant and apply a numerical scoring system, with both the minimum point scores for each category, and a score of 70 out of a possible 100 overall points, required to be prequalified. The Prequalification Committee shall prepare a written record of the evaluation of each Applicant.

The scoring system shall provide for the assigning of scores as follows. The Prequalification Committee shall first consider whether the Applicant has met the requirements of Subparagraphs d, e and f, bonding commitment letter, certificate of

eligibility and update statement. If the Applicant has satisfied those criterion, it shall be awarded up to 100 points using the criteria listed above. Applicants that do not meet the requirements of Subparagraphs d, e and f shall not be presented to the Prequalification Committee for consideration.

Any Applicant that fails to achieve either an overall score of at least 70 or that fails to achieve the minimum required points within each category shall be deemed not to be prequalified for the category of work for which the Applicant sought prequalification. If it is determined at any time during the evaluation process, that an Applicant has willfully supplied materially false or misleading information in its application or otherwise, the Applicant may be eliminated from further consideration for prequalification for the Project and, in the discretion of the Commissioner, for any other projects requiring prequalification under these Procedures.

The decision of the Prequalification Committee shall be final and not subject to appeal except on the grounds of fraud or collusion. An Applicant firm's prequalification score shall be made available to that Applicant firm only and only upon request. An Applicant firm's score shall not be a public record as defined in M.G.L. c. 4, §7 and shall not be open to public inspection to the fullest extent possible under the law.

A list of the Applicants that have been determined by the Prequalification Committee to be prequalified and therefore eligible to bid shall be posted at the offices of the City of Worcester listing the firms by trade categories. Applicants shall also be notified of the Prequalification Committee's determination on prequalification by mail at the address furnished by each Applicant.

The Prequalification Committee reserves the right to reopen the prequalification process for any category of work before it has completed its evaluation of firms that previously submitted City of Worcester's SOQs and/or to hold multiple rounds of prequalification for any given category of work. In either case, any Applicant that has submitted a complete City of Worcester SOQ shall not be required to submit another one, although any Applicant not prequalified may elect to amend its SOQ prior to the latest deadline for submitting information for the trade contract for which the Applicant seeks to be prequalified.

No person or firm suspended or debarred pursuant to Massachusetts General Laws Chapter 29, Section 29F, or Chapter 149, Section 44C, or disqualified pursuant to Chapter 7, Section 38D, or which has been debarred by the Federal Government shall be determined to be qualified to compete for a trade contract or any other contract or subcontract to be issued on the Project. If any Applicant determined to be qualified to perform one or more trade contracts is subsequently suspended or debarred pursuant to such laws, the qualification of such Applicant shall be rescinded and such Applicant shall be notified of such action and eliminated from the list of prequalified bidders.

Determinations to Remain in Effect. The Prequalification Committee's determinations as to which Applicants are prequalified shall remain in effect, subject to the following provisions of this Section 2.5, for the duration of the Project. Upon receipt at any time of additional information deemed material and significant by the Prequalification Committee regarding a previously prequalified Applicant's qualifications or responsibility, including, but not limited to, compliance with any minimum prequalification requirements, the Prequalification Committee may determine, in consultation with the City of Worcester and the CM, that the Applicant is not

qualified to perform the applicable trade contract(s) for the Project. In such event, the Prequalification Committee shall notify the Applicant of its determination, and inform the Applicant of any information on which the Prequalification Committee's determination is based that was not furnished by the Applicant.

**C. Bidding**

1. Requests for Bids. A request for bids ("RFB") will be issued for each trade contract subject to Sections 2 and 3 of these Procedures. The RFB will only be issued to the Trade Contractors appearing on the list of prequalified Applicants for the applicable trade contract determined pursuant to Section 2 above. The RFB shall include at least the following attachments:
  - a. the date, time and place for submission of responses to the request for bids. All Trade Contractor bids for DCAM projects will be submitted and opened at the architectural offices of DPW&P at 50 Skyline Drive, Worcester, MA 01605.;
  - b. fully detailed drawings and specifications by class of work in accordance with paragraph (a) of Subsection 1 of Section 44F of Chapter 149 of the Massachusetts General Laws (i.e., separate specification sections for the trades listed in Paragraph 1.1 above) which shall provide for full competition for each item of material to be furnished under the contract as set forth under subsection (b) of M.G.L. c.30, §39M;
  - c. drawings and specifications that provide for full competition for each item of material to be furnished under the contract as set forth under Subsection (b) of Section 39M of Chapter 30 of the Massachusetts General Laws;
  - d. a detailed definition of the Trade Contractor's scope of work, including alternates and unit price items, if any, within that scope of work;
  - e. a project schedule indicating the planned sequence and duration of each trade contractor's work;
  - f. list of the Trade Contractors prequalified for the work covered by the RFB;
  - g. a Trade Contractor bid form, in a format provided by the City of Worcester, that shall require, without limitation, a listing of price, addenda, alternates and unit price items, if any, for the trade work; certification that the trade contractor will perform the complete trade work with employees on his own payroll, except for work customarily performed by sub-trade subcontractors within the trade; and the names of all sub-trade subcontractors to be used if awarded the trade contract and each sub-trade contract sum; to the extent applicable, an identification by the Trade Contractor that it is a MBE or WBE or a list of the MBEs and/or WBEs proposed to be used by the Trade Contractor;
  - h. an affidavit that must be executed by all bidders confirming that all sub-trade subcontractors named on the bid form have been prequalified by the Trade Contractor using criteria similar to the criteria for the prequalification of Trade Contractors;
  - i. an affidavit of tax compliance that must be executed by all bidders;
  - j. an affidavit of prevailing wage compliance pursuant to M.G.L. c. 149, §§ 26 and 27 that must be executed by all bidders;

- k. a noncollusion affidavit that must be executed by all bidders;
  - l. a requirement that a bidder post a 5% bid bond from a surety company licensed to do business in the Commonwealth and whose names appears on U.S. Treasury Department Circular 570; but the bid bond shall be returned to the bidder if the bidder is not selected as the Trade Contractor;
  - m. a budget for the project, and the budget amount for the trade contract scope of work as provided in the project guaranteed maximum price, if available, or as provided in the most recent budget for the project;
  - n. a requirement that a bidder submit a current Certificate of Eligibility issued by the City of Worcester to the Trade Contractor showing that the Trade Contractor is certified for the trade category for which the bid is submitted.
  - o. a requirement that a bidder submit a completed Update Statement with its bid; and
  - p. a Trade Contractor agreement form as set forth in M.G.L. c. 149A, §8 (k).
- The prequalified Trade Contractors shall submit bids in compliance with the requirements of the Request for Bids package.

2. 2. Bid Opening, Award, Rejection and Negotiation of Bids. Bids shall be opened publicly by the City of Worcester. Bids for each trade shall be: a) accepted only from firms appearing on the list of prequalified firms described in Paragraph 2.4 for such trade; b) submitted as set forth in the RFB, and c) opened publicly. Any bid which does not include the bid bond or affidavits required pursuant to law or any response in which the information requested is incomplete, conditional, or obscure or which contains any additions not required in the request for bids package shall be rejected. The trade contract for each trade shall be awarded to the lowest prequalified bidder except that the City of Worcester reserves the right to reject the bids of any and all Trade Contractors if: a Trade Contractor is not eligible to submit a bid; if the bid does not represent the bid of a person competent to perform the work specified; or if less than three such bids were received and the prices are not reasonable for acceptance without further negotiation or competition. In addition if fewer than three responsive bids are received for any trade category and the lowest bid exceeds the estimated cost for the work, the CM shall attempt to negotiate an acceptable price with the lowest prequalified bidder. If the negotiations are unsuccessful, the construction manager shall terminate negotiations with the lowest prequalified bidder and shall initiate negotiations with the trade contractor who was the second lowest prequalified bidder. If the CM is unsuccessful in negotiating an acceptable price with the lowest prequalified bidder and second lowest prequalified bidder, the construction manager, on behalf of and with the consent of the public agency, shall solicit additional bids utilizing the procedures for selection of subcontractors who are not trade contractors, set out below and in M.G.L. c. 149A, § 8 (j).
3. 3. Trade Contract Execution. Each trade contractor selected to perform work on the Project shall return an executed trade contract

including the required performance and payment bonds and insurance certificate to the CM within 10 business days of receipt of the trade contract from the CM. The trade contract shall be the trade contract agreement required by law and in a form provided by the City of Worcester.

## **II. OTHER SUBCONTRACTS**

### **A. Applicability of Procedures**

1. Subcontracts Subject to Procedures For Other Subcontracts. The process set forth in these Sections 4 and 5 of the Procedures shall apply to the procurement of subcontracts and subcontractors that are not subject to the provisions of Sections 2 and 3 above, specifically subcontractors that are not Trade Contractors, and where the subcontract scope of work has an estimated value that is equal to or exceeds \$20,000.

### **B. Prequalification and Procurement**

1. Subcontracts in With An Estimate Cost equal to or greater than \$20,000. For Subcontracts that are not trade contracts with an estimated cost equal to or greater than \$20,000, the CM shall submit to the City of Worcester for its approval the qualifications which it believes a subcontractor must have to perform the work of the subcontract and a list of a minimum of three (3) subcontracting firms, and preferably at least five (5) subcontracting firms, which the CM believes meet the qualifications. The CM shall submit information in a form and content satisfactory to the City of Worcester concerning the qualifications and responsibility of the proposed subcontractors and, when relevant, how the selection will further the CM's compliance with its Project MBE and WBE participation goals. The CM firm may submit its qualifications to bid on subcontract work provided that the CM customarily performs the work for which it submits its qualifications and does so with employees on its own payroll, and provided that the CM meets all the requirements of the selection process. The City of Worcester may eliminate firms from the list of firms submitted by the CM, and the City of Worcester may add firms to the list submitted by the CM. The CM must add the firms requested by the City of Worcester to the list if the firms are acceptable to the CM. If the firms the City of Worcester requested be added are not acceptable to the CM based upon qualifications, ability or for any other reason the CM must advise the City of Worcester of its objections and the basis for the objections in writing. If the City of Worcester determines that the CM's objections to the City of Worcester requested firm(s) are valid then the requested firms will not be added to the list otherwise the firm(s) requested by the City of Worcester will be added.

The CM will invite all subcontractors on the approved list to submit bids for the subcontract work, using forms and procedures approved by the City of Worcester. The bids shall be based on detailed bidding information developed by the CM for the subcontract work. The CM will submit to the City of Worcester a list of bids submitted for each subcontract and with the list will indicate the bidder it recommends be selected to be awarded a subcontract. The CM shall along with its submission provide a written explanation as to the reasons for its selection and recommendation. The CM's recommendation

will be based on relevant factors including, but not limited to, price, quality of work, and MBE and/or WBE participation. City of Worcester's approval is required before a subcontract can be awarded by the CM to a subcontractor, which approval shall not be unreasonably withheld provided the selection will not have an adverse effect on meeting project goals including, but not limited to, price, quality of work and/or MBE/WBE participation. In no event will the selection of a subcontractor affect the GMP agreed to by the CM.

The CM may, with the approval of the City of Worcester, reject the proposals for a subcontract and either resolicit that scope of work or negotiate with one or more of the firms that submitted the rejected proposals. Such rejection may be based on the proposal being too high compared to the amount carried in the GMP for that scope of work or upon any other basis approved by the City of Worcester.

2. Subcontracts With An Estimated Cost Less Than \$20,000. Subcontracts with an estimated cost less than \$20,000, and subcontracts for the supply of materials or equipment not including performance of labor in construction at the Project site, regardless of the estimated cost, may be awarded by the CM using any method selected by the CM with the approval of the City of Worcester.

### **III. OTHER PROCUREMENT PROVISIONS**

#### **A. Emergencies**

In case of an emergency, the City of Worcester or the CM, with the prior approval of the City of Worcester, may award a contract for such work as is necessary to preserve or protect the health or safety of persons or property on the basis of such competitive bids or proposals as it can reasonably obtain in time to respond to the emergency and without public advertisement or opening of bids or proposals; or the CM may perform such work with its own forces.

#### **B. Termination of Contracts**

Termination of Trade Contracts and Other Subcontracts. If a trade contract, or other subcontract, is terminated in whole or in part by the CM **after** the subcontractor commences work but prior to completion of the work covered by such trade contract or other subcontract on account of breach or default by the trade contractor or other subcontractor, or for other reasons in the public interest approved by the City of Worcester, the CM may engage a replacement subcontractor using any method selected by the CM and approved by the City of Worcester, or may perform the affected work with its own forces, as necessary to preserve, protect, or complete the work without following these procedures and without public advertisement or opening of bids or proposals. The termination of a trade or other subcontractor prior to completion of its work shall not be the basis for an increase in the GMP.

#### **C. Miscellaneous Provisions**

1. Procurement Records. The Prequalification Committee and the CM shall ensure that the City of Worcester has a complete set of the following records:
  - a. All RFQs issued pursuant to Section 2 of these Procedures, including all addenda.

- b. All City of Worcester's SOQs and other information furnished to or otherwise obtained by the Prequalification Committee and the CM concerning qualification of each Applicant responding to an RFQ including any references or scoring obtained or generated in connection with the SOQs.
- c. All RFBs issued by the CM to prequalified Trade Contractors pursuant to Section 3 of these Procedures.
- d. All bids received from such Trade Contractors in response to such RFBs.
- e. All solicitations for bids or proposals issued by the CM to firms other than Trade Contractors.
- f. All bids and proposals received by the CM from such firms in response to such solicitations.
- g. All contracts awarded pursuant to these procedures.
- h. All other written documents required pursuant to the terms of these Procedures.
- i. All other documents referring or relating to the evaluation of qualifications, proposals or bids, including but not limited to, all notes (to the extent included in Project files), memoranda, correspondence and meeting minutes, whether formal or informal, in either electronic media or hard copy.

The City of Worcester shall retain copies of such records for a period of six (6) years from the date of final payment under the contract to which such records relate. The Secretary of Administration and Finance and the Inspector General of the Commonwealth shall have access to all such records at any time upon reasonable notice.

- 2. Severability. If any provision of these Procedures shall be determined to be invalid or unenforceable, the remaining provisions of the Procedures shall remain in full force and effect.
- 3. Time. The periods of time within which any party is required to act under the terms of these procedures when described in terms of "days" shall, unless otherwise specified, mean calendar days (and not business days), except that if the last day of any such time period falls on a Saturday, Sunday, or legal holiday in Massachusetts, the period of time during which the required action must be taken will be extended to the next following business day.

## **APPENDIX D**

- Form for Subcontract between Construction Manager and Trade Contractor
- Form for Subcontract between Construction Manager and Subcontractor

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

**COMMONWEALTH OF MASSACHUSETTS  
FORM FOR SUBCONTRACT BETWEEN CONSTRUCTION MANAGER AND TRADE  
CONTRACTOR AS SET FORTH IN THE CONTRACT DOCUMENTS**

THIS AGREEMENT made this \_\_\_\_\_ day of \_\_\_\_\_, 20\_\_\_\_, by and between

\_\_\_\_\_ a corporation organized and existing under the law of \_\_\_\_\_  
a partnership consisting of \_\_\_\_\_  
an individual doing business as \_\_\_\_\_  
hereinafter called the "Construction Manager or CM" and

\_\_\_\_\_ a corporation organized and existing under the laws of \_\_\_\_\_  
a partnership consisting of \_\_\_\_\_  
an individual doing business \_\_\_\_\_  
hereinafter called the "Trade Contractor" or "Subcontractor",

WITNESSETH that the CM and the Trade Contractor for the considerations hereafter named, agree as follows:

1. The Trade Contractor agrees to furnish all labor and materials required for the completion of all work specified in Section No. \_\_\_\_\_ of the Specifications for \_\_\_\_\_ (Name of Sub-trade) and the Plans referred to therein and addenda No. \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_ and \_\_\_\_\_ for the \_\_\_\_\_

\_\_\_\_\_ (complete title of project and project no. taken from the title page of the Specifications)  
all as prepared by \_\_\_\_\_

(Name of Designer or Engineer)

for the sum of \_\_\_\_\_ (\$\_\_\_\_\_)

and the CM agrees to pay the Trade Contractor said sum for said work. This price includes the following alternates (and other items set forth in the sub-bid):

Alternate No(s) \_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_,  
\_\_\_\_\_, \_\_\_\_\_, \_\_\_\_\_.

(a) The Trade Contractor agrees to be bound to the CM by the terms of the hereinbefore described Plans, Specifications (including all general conditions stated herein) and addenda Nos. \_\_\_\_\_, \_\_\_\_\_, and \_\_\_\_\_, and to assume to the CM all the obligations and responsibilities that the CM by those documents assumes to the \_\_\_\_\_

\_\_\_\_\_ hereinafter called the “Awarding Authority,” except to the extent that provisions contained herein are by their terms or by law applicable only to the CM.

(b) The CM agrees to be bound to the Trade Contractor by the terms of the hereinbefore described documents and to assume to the Trade Contractor all the obligations and responsibilities that the Awarding Authority by the terms of the hereinbefore described documents assumes to the CM, except to the extent that provisions contained therein are by their terms or by law applicable only to the Awarding Authority. The Trade Contractor shall preserve and protect the rights of the City of Worcester under the Contract Documents with respect to the Work to be performed by the Trade Contractor so that the subcontracting thereof will not prejudice such rights, and shall be subject to the Record Retention requirements as set forth in the Contract Documents.

2. The CM agrees to begin, prosecute and complete the entire work specified by the Awarding Authority in an orderly manner so that the Trade Contractor will be able to begin, prosecute and complete the work described in this subcontract; and, in consideration thereof, upon notice from the CM, either oral or in writing, the Trade Contractor agrees to begin, prosecute and complete the work described in this Subcontract in an orderly manner and with due consideration to the date or time specified by the Awarding Authority for the completion of the entire work.

3. The Trade Contractor agrees to furnish to the CM within a reasonable time after the execution of this subcontract, evidence of workmen’s compensation insurance as required by law and evidence of public liability and property damage insurance of the type and in limits required to be furnished to the Awarding Authority by the CM.

4. The CM agrees that no claim for services rendered or materials furnished by the CM to the Trade Contractor shall be valid unless written notice thereof is given by the CM to the Trade Contractor during the first ten (10) days of the calendar month following that in which the claim originated.

5. The Trade Contractor agrees that it shall enter into similar agreements, as this, with its Subcontractors, except to the extent that provisions contained herein are by their terms or by law applicable only to the CM and/or Contractor.

6. The CM agrees that it has provided to the Trade Contractor, prior to the execution of this Subcontract, copies of the Contract Documents to which the Trade Contractor will be bound by this Subcontract. The Trade Contractor agrees that it shall similarly make copies of such Contract Documents available to its Subcontractors.

7. In the event of termination of the Contract due to the default of the CM or for any other reason, the City of Worcester shall have the right (but shall have no obligation) to assume, and/or accept assignment of and further assign to a general contractor or construction manager or other third party who is qualified and has sufficient resources to complete the Work, the rights of the CM under the Subcontract with such Trade Contractor. In the event of such assumption or assignment by the City of Worcester, the Trade Contractor shall have no claim against the City of Worcester or such third party for work performed by such Trade Contractor or other matters

arising prior to termination of the Contract, and the DCAM or such third party, as the case may be, shall be liable only for obligations to the Trade Contractor arising after such assumption or assignment.

8. Nothing contained herein, shall be construed to create any contractual relationship between the Trade Contractor and the City of Worcester.

9. This agreement is contingent upon the execution of a Contract for Construction Management Services between the CM and the Awarding Authority for the complete work.

IN WITNESS WHEREOF, the parties hereto have executed this agreement the day and year first above-written.

CITY OF WORCESTER

**SUPPLEMENTARY GENERAL CONDITIONS**

**STATUTORY PROVISIONS FOR MASSACHUSETTS  
PUBLIC CONSTRUCTION CONTRACTS**

The following provisions are required by or are intended to be consistent with requirements of Massachusetts's statutes governing public construction contracts in the Commonwealth of Massachusetts (hereinafter referred to as the "Commonwealth"). Any other provisions required by statute to be included herein shall be deemed to be so included. In addition, the parties recognize that other rights, duties, and obligations with respect to public construction contracts are provided for by statute, notwithstanding the fact that they are not provided for in the Contract Documents. In case of conflict between the provisions of these Supplementary General Conditions and other provisions in the Contract Documents, the provisions of these Supplementary General Conditions shall govern. In case of conflict between the provisions of these Supplementary General Conditions and the provisions of any applicable statute, the statutory provisions shall govern. Where the term "Awarding Authority" appears in the following paragraphs, it shall be taken as meaning the Owner.

**ARTICLE 1 - PAYMENT, CONTRACT ADMINISTRATION, etc.**

- 1.1** "Or Equal" Clause: (Statutory reference: M.G.L. Chapter 30, Section 39M(b)). This Paragraph 1.1 applies to every contract for the construction, reconstruction or repair of any public work or for the purchase of any material by the Commonwealth, any political subdivision thereof, or any county, city, town, district or housing authority (above certain dollar limits, as stated in the statute), and to contracts awarded pursuant to M.G.L. Chapter 149, Sections 44A through 44H. The said Sections 44A through 44H apply to every contract for the construction, reconstruction, installation, demolition, maintenance or repair of any building by a department, agency, board, commission, authority, or other instrumentality or the Commonwealth or political subdivision thereof, or two or more subdivisions thereof, but not including the Massachusetts Bay Transportation Authority, estimated to cost more than a dollar amount set forth in M.G.L. Chapter 149, Section 44A.
- 1.1.1** Where products or materials are prescribed by manufacturer name, trade name, or catalog reference, the words "or approved equal" shall be understood to follow. An item shall be considered equal to the item so named or described if, in the opinion of the Architect:
- (1) It is at least equal in quality, durability, appearance, strength, and design;
  - (2) It performs at least equally the function imposed in the general design for the work;
  - (3) It conforms substantially, even with deviations, to the detailed requirements for the items as indicated by the specifications.

- 1.1.2** Any structural or mechanical changes made necessary to accommodate substituted equipment under this paragraph shall be at the expense of the Contractor or Subcontractor responsible for the work item. See other paragraphs of General and Supplementary Conditions for procedures to be used in determining compliance with the standards of this paragraph.
- 1.2** Delays: (Statutory reference: Chapter 30, Section 39O). This Paragraph 1.2 applies to every contract subject to M.G.L. Chapter 30, Section 39M and to every contract subject to Chapter 149, Sections 44A through 44H.
- 1.2.1** Except as otherwise provided by law and by this Paragraph 1.2, the Contractor shall not be entitled to damages on account of any hindrances or delays, avoidable or unavoidable; but if such delay be occasioned by the Awarding Authority, the Contractor may be entitled to an extension of time only, in which to complete the work, to be determined by the Architect.
- (1) The Awarding Authority may order the Contractor in writing to suspend, delay, or interrupt all or any part of the work for such period of time as it may determine to be appropriate for the convenience of the Awarding Authority; provided, however, that if there is a suspension, delay or interruption for fifteen days or more or due to a failure of the Awarding Authority to act within a time as may be otherwise specified in this contract and without the fault or negligence of the Contractor, the Awarding Authority shall make an adjustment in the contract price for any increase in the cost of performance of this contract but shall not include any profit or overhead to the Contractor on such increase; and provided further, that the Awarding Authority shall not make any adjustment in the contract price under this provision for any suspension, delay, interruption or failure to act to the extent that such is due to any cause for which this contract provides for an equitable adjustment of the contract price under any other contract provisions.
- (2) The Contractor must submit the amount of a claim under provision (a) to the Awarding Authority in writing as soon as practicable after the end of the suspension, delay, interruption or failure to act and, in any event, not later than the date of final payment under this contract, and except for costs due to a suspension order, the Awarding Authority shall not approve any costs in the claim incurred more than twenty days before the Contractor notified the Awarding Authority in writing of the act or failure to act involved in the claim.
- (a) In the event a suspension, delay, interruption or failure to act of the Awarding Authority increases the cost of performance of any Subcontractor, that Subcontractor shall have the same rights against the Contractor for payment for an increase in the cost of his performance as provisions (a) and (b) give the Contractor against the Awarding Authority, but nothing in provisions (a) and (b) shall in any way change, modify or alter any other rights which the Contractor or the Subcontractor may have against each other.
- 1.3** Deviations: (Statutory reference: M.G.L. Chapter 30, Section 39I). This Paragraph 1.3 applies to every contract for the construction, alteration, maintenance, repair or demolition of, or addition to, any public building or public works for the Commonwealth or any political subdivision thereof.

- 1.3.1** The Contractor shall perform all the work required by this contract in conformity with the Drawings and Specifications contained herein. No willful and substantial deviation from said Drawings and specifications shall be made unless authorized in writing by the Awarding Authority or by the Engineer or Architect in charge of the work who is duly authorized by the Awarding Authority to approve such deviations. In order to avoid delays in the prosecution of the work required by such contract, such deviation from the Drawings or Specifications may be authorized by a written order of the Awarding Authority or such Engineer or Architect so authorized to approve such deviation. Within thirty (30) days thereafter, such written order shall be confirmed by a certificate of the Awarding Authority stating: (1) If such deviation involves any substitution or elimination of materials, fixtures or equipment, the reasons why such materials, fixtures or equipment were included in the first instance and the reasons for substitution or elimination, and, if the deviation is of any other nature, the reasons for such deviation, giving justification therefore (2) that the specified deviation does not materially injure the project as a whole; (1) that either the work substituted for the work specified is the same cost and quality, or that an equitable adjustment has been agreed upon between the Awarding Authority and the Contractor and the amount in dollars of said adjustment; and (4) that the deviation is in the best interest of the Awarding Authority.
- 1.3.2** Such certificate shall be signed under the penalties of perjury and shall be a permanent part of the file record of the work contracted for.
- 1.4** Finality of Decisions by Awarding Authority or Architect: (Statutory reference: M.G.L. Chapter 30, Section 39J). This Paragraph 1.4 applies to every contract for the construction, reconstruction, alteration, remodeling, repair or demolition of any public building or public works by the Commonwealth or by any county, city, district, board, commission, or other public body, when the amount of the contract exceeds the amount stated in M.G.L. Chapter 30, Section 39J.
- 1.4.1** Notwithstanding any contrary provision of this contract, no decision by the Awarding Authority or by the Architect on a dispute, whether of fact or of law, arising under said contract shall be final or conclusive if such decision is made in bad faith, fraudulently, capriciously, or arbitrarily, is unsupported by substantial evidence, or is based upon error of law.
- 1.5** Differing Site Conditions: (Statutory reference: M.G.L. Chapter 30, Section 39N). This Paragraph 1.5 applies to every contract subject to M.G.L. Chapter 30, Section 39M and to every contract subject to M.G.L. Chapter 149, Sections 44A through 44H.
- 1.5.1** If, during the progress of the work, the Contractor or the Awarding Authority discovers that the actual subsurface or latent physical conditions encountered at the site differ substantially or materially from those shown on the Drawings or indicated in the Contract Documents, either the Contractor or the Awarding Authority may request an equitable adjustment in the contract price of the contract applying to work affected by the differing site conditions. A request for such an adjustment shall be in writing and shall be delivered by the party making such claim to the other party as soon as possible after such conditions are discovered. Upon receipt of such a claim from a Contractor, or upon its own initiative, the Awarding Authority shall make an investigation of such physical conditions, and, if they differ substantially or materially from those shown on the

Drawings or indicated in the Contract Documents or from those ordinarily encountered and generally recognized as inherent in work of the character provided for in the Drawings and Contract Documents and are such a nature as to cause an increase or decrease in the cost of the work, the Awarding Authority shall make an equitable adjustment in the contract price and the contract shall be modified in writing accordingly.

- 1.6** Timely Decision by Awarding Authority: (Statutory reference: M.G.L. Chapter 30, Section 39P). This Paragraph 1.6 applies to every contract subject to M.G.L. Chapter 30, Section 39M, and to every contract subject to M.G.L. Chapter 149, Sections 44A through 44H.
- 1.6.1** In every case in which this contract requires the Awarding Authority, any Official, its Architect or Engineer to make a decision on interpretation of the specifications, approval of equipment, material or any other approval, or progress of the work, the decision shall be made promptly and, in any event, no later than thirty (30) days after the written submission for decision; but if such decision requires extended investigation and study, the Awarding Authority, the Official, Architect or Engineer shall, within thirty (30) days after the receipt of the submission, give the party making the submission written notice of the reasons why the decision cannot be made within the thirty (30) day period and the date by which the decision will be made.
- 1.7** Certificate of Appropriation: (Statutory reference: M.G.L. Chapter 44, Section 31C). This Paragraph 1.7 applies to contracts for construction, reconstruction, alteration, remodeling, repair or demolition of any public building or public work by any city or town costing more than the amount set forth in M.G.L. Chapter 44, Section 31C.
- 1.7.1** This Contract shall not be deemed to have been made until the auditor or accountant or other officer of the city or town having similar duties has certified thereon that an appropriation in the amount of this contract is available therefore and that an officer of the city, town, or Awarding Authority has been authorized to execute said contract and approve all requisitions and change orders. No order to the Contractor for a change in or addition to the work, whether in the form of a drawing, plan, detail or any other written instruction, unless it is an order which the Contractor is willing to perform without any increase in the contract price, shall be deemed to be given until the auditor or accountant, or other officer of the Awarding Authority having similar duties, has certified thereon that an appropriation in the amount of such order is available therefore; but such certificate shall not be taken as an admission by the Awarding Authority of its liability to pay for such work. The certificate of the auditor or accountant or other officer of the Awarding Authority having similar duties, that an appropriation in the amount of this contract or in the amount of such order is available shall bar any defense by the Awarding Authority on the ground of insufficient appropriation.
- 1.8** Method of Payment: (Statutory reference: M.G.L. Chapter 30, Section 39K). This Paragraph 1.8 applies to every contract for the construction, reconstruction, alteration, remodeling, repair or demolition of any public building by the Commonwealth, or by any county, city, town, district, board, commission or other public body, when the amount is more than two thousand dollars (\$2,000).

- 1.8.1** Within fifteen (15) days after receipt from the Contractor, at the place designated by the Awarding Authority if such a place is so designated, of a periodic estimate requesting payment of the amount due for the preceding month, the awarding authority will make a periodic payment to the Contractor for the work performed during the preceding month and for the materials not incorporated in the work but delivered and suitably stored at the site (or at some location agreed upon in writing) to which the Contractor has title or to which a Subcontractor has title and has authorized the Contractor to transfer title to the Awarding Authority, less (1) a retention based on its estimate of the full value of its claims against the Contractor and less (2) a retention for direct payments to Subcontractors based on demands for same in accordance with the provisions of Paragraph 1.10 of these Supplementary General Conditions, and less (3) a retention not exceeding five (5) percent of the approved amount of the periodic payment. After the receipt of a periodic estimate requesting final payment and within sixty-five (65) days after (a) the Contractor fully completes the work or substantially completes the work so that the value of the work remaining to be done is, in the estimate of the Awarding Authority, less than one percent of the original contract price, or (b) the Contractor substantially completes the work and the Awarding Authority takes possession for occupancy, whichever occurs first, the Awarding Authority shall pay the contractor the entire balance due on the contract less (1) a retention based on its estimate of the fair value of its claims against the Contractor and of the cost of completing the incomplete and unsatisfactory items of work and less (2) a retention for direct payments to Subcontractors based on demands for same in accordance with the provisions of Paragraph 1.10 of these Supplementary General Conditions, or based on the record payments by the Contractor to the Subcontractors under this contract if such record of payment indicates that the Contractor has not paid Subcontractors as provided in Paragraph 1.10. If the Awarding Authority fails to make payment as herein provided, there shall be added to each such payment daily interest at the rate of three (3) percentage points above the rediscount rate then charged by the Federal Reserve Bank of Boston commencing on the first day after said payment is due and continuing until the payment is delivered or mailed to the contractor; provided, that no interest shall be due, in any event, on the amount due on a periodic estimate for final payment until fifteen (15) days after receipt of such periodic estimate from the Contractor, at the place designated by the awarding authority if such a place is so designated. The Contractor agrees to pay to each Subcontractor a portion of any such interest paid in accordance with the amount due each Subcontractor.
- 1.8.2** The Awarding Authority may make changes in any periodic estimate submitted by the Contractor, and the payment due on said periodic estimate shall be computed in accordance with the change so made, but such changes or any requirement for a corrected periodic estimate shall not affect the due date for the periodic payment or the date for the commencement of interest charges on the amount of the periodic payment computed in accordance with the changes made, as provided herein; provided, that the Awarding Authority may, within seven (7) days after receipt, return to the Contractor for correction, any periodic estimate which is not in the required form or which contains computations not arithmetically correct and, in that event, the date of receipt of such periodic estimate shall be the date of receipt of the corrected periodic estimate in proper form and with arithmetically correct computations. The date of receipt of a periodic estimate received on a Saturday shall be the first working day thereafter.

- 1.8.3** All periodic estimates shall be submitted to the Awarding Authority, or to its designee as set forth in writing to the Contractor, and the date of receipt by the Awarding Authority or its designee shall be marked on the estimate. All periodic estimates shall contain a separate item for each subtrade and each sub-subtrade, listed in the sub-bid form as required by the specifications, and a column listing the amount paid to each subcontractor and sub-subcontractor as of the date the periodic estimate is filed. The person making payment for the Awarding Authority shall add the daily interest provided for herein to each payment for each day beyond the due date based on the date of receipt marked on the estimate.
- 1.8.4** A certificate of the Architect to the effect that the Contractor has fully or substantially completed the work shall, subject to the provisions of Paragraph 1.4 of these Supplementary General Conditions, be conclusive for the purposes of this Paragraph 1.8.
- 1.8.5** Notwithstanding the provisions of this section, at any time after the value of the work remaining to be done is, in the estimation of the awarding authority, less than 1 per cent of the adjusted contract price, or the awarding authority has determined that the contractor has substantially completed the work and the awarding authority has taken possession for occupancy, the awarding authority may send to the general contractor by certified mail, return receipt requested, a completed and final list of all incomplete and unsatisfactory work items, including, for each item on the list, a good faith estimate of the fair and reasonable cost of completing such item. The general contractor shall then complete all such work items within 30 days of receipt of such list or before the contract completion date, whichever is later. If the general contractor fails to complete all incomplete and unsatisfactory work items within 45 days after receipt of such items furnished by the awarding authority or before the contract completion date, whichever is later, subsequent to an additional 14 days' written notice to the general contractor by certified mail, return receipt requested, the awarding authority may terminate the contract and complete the incomplete and unsatisfactory work items and charge the cost of same to the general contractor and such termination shall be without prejudice to any other rights or remedies the awarding authority may have under the contract. The awarding authority shall note any such termination on the evaluation form to be filed by the awarding authority pursuant to the provisions of section 44D of chapter 149.
- 1.9** Method of Payment: (Statutory reference: M.G.L. Chapter 30, Section 39G). This Paragraph 1.9 applies to every contract for the construction, reconstruction, alteration, remodeling, repair or improvement of public ways; including bridges and other highway structures, sewers and water mains, airports and other public works entered into with the Commonwealth, or any agency or political subdivision thereof.
- 1.9.1** Upon substantial completion of the work required by a contract with the Commonwealth, or any agency or political subdivision thereof, for the construction, reconstruction, alteration, remodeling, repair or improvement of public ways, including bridges and other highway structures, sewers and water mains, airports and other public works, the contractor shall present in writing to the Awarding Authority its certification that the work has been substantially completed. Within twenty-one (21) days thereafter, the Awarding Authority shall present to the contractor either a written declaration that the work has been substantially completed or an itemized list of incomplete or unsatisfactory work items required by the contract sufficient to demonstrate that the work has not been substantially completed. The Awarding Authority may include with such list a notice

setting forth a reasonable time, which shall not in any event be prior to the contract completion date, within which the contractor must achieve substantial completion of the work. In the event that the Awarding Authority fails to respond, by presentation of a written declaration or itemized list as aforesaid, to the contractor's certification within the twenty-one (21) day period, the contractor's certification shall take effect as the Awarding Authority's declaration that the work has been substantially completed.

- 1.9.2** Within sixty-five (65) days after the effective date of a declaration of substantial completion, the Awarding Authority shall prepare and forthwith send to the contractor for acceptance a substantial completion estimate for the quality and price of the work done and all but one (1) per cent retainage on that work, including the quantity, price and all but one (1) percent retainage for the undisputed part of each work item and extra work item in dispute but excluding the disputed part thereof, less the estimated cost of completing all incomplete and unsatisfactory work items and less the total periodic payments made to date for the work. The Awarding Authority also shall deduct from the substantial completion estimate an amount equal to the sum of all demands for direct payments filed by subcontractors and not yet paid to subcontractors or deposited in joint accounts pursuant to Section 1.10, but no contract subject to said Section 1.10 shall contain any other provision authorizing the Awarding Authority to deduct any amount by virtue of claims asserted against the contract by subcontractors, material suppliers or others.
- 1.9.3** If the Awarding Authority fails to prepare and send to the contractor any substantial completion estimate required by section 1.9.2, on or before the date herein above set forth, the Awarding Authority shall pay to the contractor interest on the amount which would have been due to the contractor pursuant to such substantial completion estimate, at the rate of three (3) percentage points above the rediscount rate then charged by the Federal Reserve Bank of Boston from such date to the date on which the Awarding Authority sends that substantial completion estimate to the contractor for acceptance or to the date of payment therefore, whichever occurs first. The Awarding Authority shall include the amount of such interest in the substantial completion estimate.
- 1.9.4** Within fifteen (15) days after the effective date of the declaration of substantial completion, the Awarding Authority shall send to the contractor by certified mail, return receipt requested, a complete list of all incomplete or unsatisfactory work items, and unless delayed by causes beyond his control, the contractor shall complete all such work items within forty-five (45) days after the receipt of such list or before the then contract completion date, whichever is later. If the contractor fails to complete such work within such time, the Awarding Authority may, subsequent to seven (7) day's written notice to the contractor by certified mail, return receipt requested, terminate the contract and complete the incomplete or unsatisfactory work items and charge the cost of same to the contractor.
- 1.9.5** Within thirty (30) days after receipt by the Awarding Authority of a notice from the contractor stating that all of the work required by the contract has been completed, the Awarding Authority shall prepare and forthwith send to the contractor for acceptance, a final estimate for the quantity and price of the work done and all retainage on that work less the payments made to date, unless the Awarding Authority's inspection shows that work items required by the contract remain incomplete or unsatisfactory, or that documentation required by the contract has not been completed. If the Awarding

Authority fails to prepare and sends to the contractor the final estimate within thirty (30) days after receipt of notice of completion, the Awarding Authority shall pay to the contractor interest on the amount which would have been due to the contractor pursuant to such final estimate at the rate hereinabove provided from the thirtieth (30th) day after such completion until the date on which the Awarding Authority sends the final estimate to the contractor for acceptance or the date of payment therefore, whichever occurs first, provided that the Awarding Authority's inspection shows that no work items required by the contract remain incomplete or unsatisfactory. Interest shall not be paid hereunder on amounts for which interest is required to be paid in connection with the substantial completion estimate as hereinabove provided.

- 1.9.6** The Awarding Authority shall pay the amount due pursuant to any periodic substantial completion or final estimate within thirty-five (35) days after receipt of written acceptance for such estimate from the contractor and shall pay interest on the amount due pursuant to such estimate at the rate hereinabove provided from that thirty-fifth (35) day to the date of payment. In the case of periodic payments, the Awarding Authority may deduct from its payment a retention based on its estimate of the fair value of its claim against the contractor, a retention for direct payments to subcontractors based on demands for same in accordance with the provisions of Section 1.10, and a retention to secure satisfactory performance of the contractual work not exceeding five (5) percent of the approved amount of any periodic payment, and the same right to retention shall apply to bonded subcontractors entitled to direct payment under Section 1.10; provided, that a five percent value of all items that are planted in the ground shall be deducted from the periodic payments until final acceptance.
- 1.9.7** No periodic, substantial completion or final estimate or acceptance or payment thereof shall bar a contractor from reserving all rights to dispute the quantity and amount of, or the failure of the Awarding Authority to approve a quantity and amount of, all or part of any work item or extra work item.
- 1.9.8** Substantial completion, for the purpose of this Paragraph 1.9, shall mean either that the work required by the contract has been completed except for work having a contract price of less than one (1) percent of the then adjusted total contract price, or substantially all of the work has been completed and opened to public use except for minor incomplete or unsatisfactory work items that do not materially impair the usefulness of the work required by the contract.
- 1.10** Direct Payment: (Statutory reference: M.G.L. Chapter 30, Section 39F). This Paragraph 1.10 applies to every contract awarded pursuant to M.G.L. Chapter 149, Sections 44A through 44H, and (with the exception of Subparagraph 1.10.9) to every contract awarded pursuant to M.G.L. Chapter 30, Section 39M.
- 1.10.1** Forthwith after the Contractor receives payment on account of a periodic estimate, the Contractor shall pay to each subcontractor the amount paid for the labor performed and the materials furnished by that Subcontractor, less any amount specified in any court proceedings barring such payment and also less any amount claimed due from the Subcontractor by the Contractor.
- 1.10.2** Not later than the sixty-fifth day after each Subcontractor substantially completes the work in accordance with the Drawings and Specifications, the entire balance due under

the subcontract, less amounts retained by the Awarding Authority as the estimated cost of completing the incomplete and unsatisfactory items of work, shall be due the Subcontractor; and the Awarding Authority shall pay that amount to the Contractor. The Contractor shall forthwith pay to the Subcontractor the full amount received from the Awarding Authority less any amount specified in any court proceedings barring such payment and also less any amount claimed due from the Subcontractor by the Contractor.

- 1.10.3** Each payment made by the Awarding Authority to the Contractor pursuant to Subparagraphs 1.10.1 and 1.10.2 of this Paragraph 1.10 for the labor performed and the materials furnished by a Subcontractor shall be made to the Contractor for the account of that Subcontractor; and the Awarding Authority shall take reasonable steps to compel the Contractor to make each such payment to each such Subcontractor. If the Awarding Authority has received a demand for direct payment from a Subcontractor for any amount which has already been included in a payment to the Contractor or which is to be included in a payment to the Contractor for payment to the Subcontractor as provided in Subparagraphs 1.10.1 and 1.10.2, the Awarding Authority shall act upon the demand as provided in this Paragraph 1.10.
- 1.10.4** If, within seventy (70) days after the Subcontractor has substantially completed the subcontract work, the Subcontractor has not received from the Contractor the balance due under the subcontract including any amount due for extra labor and materials furnished to the Contractor, less any amount retained by the Awarding Authority as to the estimated cost of completing the incomplete and unsatisfactory items of work, the Subcontractor may demand direct payment of that balance from the Awarding Authority. The demand shall be by a sworn statement delivered to or sent by certified mail to the Awarding Authority, and a copy shall be delivered to or sent by certified mail to the Contractor at the same time. The demand shall contain a detailed breakdown of the balance due under the subcontract and also a statement of the status of completion of the subcontract work. Any demand made after substantial completion of the subcontract work shall be valid even if delivered or mailed prior to the seventieth day after the Subcontractor has substantially completed the subcontract work. Within ten (10) days after the Subcontractor has delivered or so mailed the demand to the Awarding Authority and delivered or so mailed a copy to the Contractor, the Contractor may reply to the demand. The reply shall be a sworn statement delivered to or sent by certified mail to the Awarding Authority, and a copy shall be delivered to or sent by certified mail to the Subcontractor at the same time. The reply shall contain a detailed breakdown of the balance due under the subcontract, including any amount due for extra labor and materials furnished to the Contractor and of the amount due for each claim made by the Contractor against the Subcontractor.
- 1.10.5** Within fifteen (15) days after receipt of the demand by the Awarding Authority, but in no event prior to the seventieth day after substantial completion of the subcontract work, the Awarding Authority shall make direct payment to the Subcontractor of the balance due under the subcontract, including any amount due for extra labor and materials furnished to the Contractor, less any amount (i) retained by the Awarding Authority as the estimated cost of completing the incomplete or unsatisfactory items of work, (ii) specified in any court proceedings barring such payment, or (iii) disputed by the Contractor in the sworn reply; provided that the Awarding Authority shall not deduct from a direct payment any amount as provided in part (iii) if the reply is not sworn to, or for which the sworn reply does not contain the detailed breakdown required by Subparagraph 1.10.4.

The Awarding Authority shall make further direct payments to the Subcontractor forthwith after the removal of the basis for deduction from direct payments made as provided in parts (I) and (ii) of this Subparagraph.

- 1.10.6** The Awarding Authority shall forthwith deposit the amounts deducted from a direct payment as provided in part (iii) of Subparagraph 1.10.5 in an interest-bearing joint account in the names of the Contractor and the Subcontractor in a bank in Massachusetts selected by the Awarding Authority or agreed upon by the Contractor and the Subcontractor and shall notify the Contractor and the Subcontractor of the date of the deposit and the bank receiving the deposit. The bank shall pay the amount in the account, including accrued interest, as provided in an agreement between the Contractor and the Subcontractor or as determined by decree of a court of competent jurisdiction.
- 1.10.7** All direct payments and all deductions from demands for direct payments deposited in an interest-bearing account or accounts in a bank pursuant to Subparagraph 1.10.6 shall be made out of amounts payable to the Contractor at the time of receipt of a demand for direct payment from a Subcontractor and out of amounts which later become payable to the Contractor and in the order or receipt of such demands from subcontractors. All direct payments shall discharge the obligation of the awarding authority to the Contractor to the extent of such payment.
- 1.10.8** The Awarding Authority shall deduct from payments to a Contractor amounts, which together with the deposits in interest-bearing accounts pursuant to Subparagraph 1.10.6, are sufficient to satisfy all unpaid balances of demands for direct payments received from Subcontractors. All such amounts shall be earmarked for such direct payments, and the Subcontractors shall have a right in such deductions prior to any claims against such amounts by creditors of the Contractor.
- 1.10.9** If the Subcontractor does not receive payment as provided in Subparagraph 1.10.1 or if the Contractor does not submit a periodic estimate for the value of the labor or materials performed or furnished by the Subcontractor and the Subcontractor does not receive payment for same when due less the deductions provided for in Subparagraph 1.10.1, the Subcontractor may demand direct payment by following the procedure in Subparagraph 1.10.4 and the Contractor may file a sworn reply as provided in that same Subparagraph. A demand made after the first day of the month following that for which the Subcontractor performed or furnished the labor and materials for which the Subcontractor seeks payment shall be valid even if delivered or mailed prior to the time payment was due on a periodic estimate from the Contractor. Thereafter the Awarding Authority shall proceed as provided in Subparagraphs 1.10.5, 1.10.6, 1.10.7 and 1.10.8.
- 1.10.10** Any assignment by a Subcontractor of the rights under this Section to a Surety company furnishing a bond under the provisions of M.G.L. Chapter 149, Section 29 shall be invalid. The assignment and subrogation court against the Awarding Authority and the Contractor shall not be a necessary party. Upon motion of any party the court shall advance for speedy trial any petition filed as provided in this paragraph. M.G.L. Chapter 231, Sections 59 and 59B shall apply to such petitions. The Court shall enter an interlocutory decree upon which execution shall issue for any part of a claim found due pursuant to Sections 59 and 59B and, upon motion of any party, shall advance for speedy trial the petition to collect the remainder of the claim. Any party aggrieved by such interlocutory decree shall have the right to appeal therefrom as from a final decree. The

court shall not consolidate for trial the petition of any Subcontractor with the petition of one or more Subcontractors or the same general contract unless the court finds that a substantial portion of the evidence of the same events during the course of construction (other than the fact that the claims sought to be consolidated arise under the same general contract) is applicable to the petitions sought to be consolidated and that such consolidation will prevent unnecessary duplication of evidence. A decree in any such price in equity in the superior court against the other and the bank shall not be a necessary party. A Subcontractor shall enforce a claim for direct payment or a right to require a deposit as provided in Subparagraph 1.10.6 by a petition in equity in the superior court against the Awarding Authority and the Contractor shall not be a necessary party. Upon motion of any party the court shall advance for speedy trial any petition filed as provided in this paragraph. M.G.L. Chapter 231, Sections 59 and 59B shall apply to such petitions. The Court shall enter an interlocutory decree upon which execution shall issue for any part of a claim found due pursuant to Sections 59 and 59B and, upon motion of any party, shall advance for speedy trial the petition to collect the remainder of the claim. Any party aggrieved by such interlocutory decree shall have the right to appeal there from as from a final decree. The court shall not consolidate for trial the petition of any Subcontractor with the petition of one or more Subcontractors or the same general contract unless the court finds that a substantial portion of the evidence of the same events during the course of construction (other than the fact that the claims sought to be consolidated arise under the same general contract) is applicable to the petitions sought to be consolidated and that such consolidation will prevent unnecessary duplication of evidence. A decree in any such proceeding shall not include interest on the disputed amount deposited in excess of the interest earned for the period of any such deposit. No person except a Subcontractor filing a demand for direct payment for which no funds due the Contractor are available for direct payment shall have a right to file a petition in a court of equity against the Awarding Authority claiming a demand for direct payment is premature, and such Subcontractor must file the petition before the Awarding Authority has made a direct payment to the Subcontractor and has made a deposit of the disputed portion as provided in part (iii) of Subparagraph 1.10.5 and in Subparagraph 1.10.6.

**1.10.11** "Subcontractor" as used in this Paragraph 1.10 (I) for contracts awarded as provided in M.G.L. Chapter 149, Sections 44A-44H, inclusive, shall mean a person who files a sub-bid and receives a subcontract as a result of that filed sub-bid or who is approved by the Awarding Authority in writing as a person performing labor or both performing labor and furnishing materials pursuant to a contract with the Contractor, and (ii) for contracts awarded as provided in M.G.L. Chapter 30, Section 39M(a), shall mean a person approved by the Awarding Authority in writing as a person performing labor or both performing labor and furnishing materials pursuant to a contract with the general contractor.

**1.10.12A** Contractor or a Subcontractor shall enforce a claim to any portion of the amount of a demand for direct payment deposited as provided in Subparagraph 1.10.6 by a petition in equity in the superior court against the other and the bank shall not be a necessary party. A Subcontractor shall enforce a claim for direct payment or a right to require a deposit as provided in Subparagraph 1.10.6 by a petition in equity in the superior court against the Awarding Authority and the Contractor shall not be a necessary party. Upon motion of any party the court shall advance for speedy trial any petition filed as provided in this paragraph. M.G.L. Chapter 231, Sections 59 and 59B shall apply to such petitions. The Court shall enter an interlocutory decree upon which execution shall issue for any part of

a claim found due pursuant to Sections 59 and 59B and, upon motion of any party, shall advance for speedy trial the petition to collect the remainder of the claim. Any party aggrieved by such interlocutory decree shall have the right to appeal there from as from a final decree. The court shall not consolidate for trial the petition of any Subcontractor with the petition of one or more Subcontractors or the same general contract unless the court finds that a substantial portion of the evidence of the same events during the course of construction (other than the fact that the claims sought to be consolidated arise under the same general contract) is applicable to the petitions sought to be consolidated and that such consolidation will prevent unnecessary duplication of evidence. A decree in any such proceeding shall not include interest on the disputed amount deposited in excess of the interest earned for the period of any such deposit. No person except a Subcontractor filing a demand for direct payment for which no funds due the Contractor are available for direct payment shall have a right to file a petition in a court of equity against the Awarding Authority claiming a demand for direct payment is premature, and such Subcontractor must file the petition before the Awarding Authority has made a direct payment to the Subcontractor and has made a deposit of the disputed portion as provided in part (iii) of Subparagraph 1.10.5 and in Subparagraph 1.10.6.

**1.10.13** In any petition to collect any claim for which a Subcontractor has filed a demand for direct payment the court shall, upon motion of the Contractor, reduce by the amount of any deposit of a disputed amount by the Awarding Authority as provided in part (iii) of Subparagraph 1.10.5 and in subparagraph 1.10.6 any amount held under a trustee writ or pursuant to a restraining order or injunction.

**1.11** Discharge or Release of Bonds (Statutory reference: M.G.L. Chapter 30, Section 40). This Paragraph 1.11 applies to every contract awarded for the construction or repair of public buildings or other public works.

**1.11.1** Bonds given to the Commonwealth, any county, city, town or political subdivision to secure the performance of contracts for the construction or repair of public buildings or other public works may be discharged or released by the Awarding Authority, upon such terms as it deems expedient, after the expiration of one (1) year from the time of completion, subject to Section 39 K, of the work contracted to be done; provided that no claim filed under said bond is pending, and provided further, that no such bonds shall be discharged or released prior to the expiration of all special guarantees provided for in the contract unless new bonds in substitution therefore specifically relating to the unexpired guarantees shall be taken.

## **ARTICLE 2 - WAGES AND EMPLOYMENT PRACTICES**

**2.1** Preference To Veterans and Citizens In Public Works; Rate of Wages: (Statutory reference: M.G.L. Chapter 149, Section 26) This Paragraph 2.1 applies to every contract or subcontract for the construction of public works by the Commonwealth or by a county, town or district.

**2.1.1** In the employment of mechanics and apprentices, teamsters, chauffeurs and laborers, preference shall first be given to citizens of the Commonwealth who have been residents of the Commonwealth for at least six (6) months at the commencement of their employment, who are veterans as defined in M.G.L. Chapter 4, Section 7, Clause 43, and who are qualified to perform the work to which the employment relates; and secondly, to

citizens of the Commonwealth generally who have been residents of the Commonwealth for at least six (6) months at the commencement of their employment, and if they cannot be obtained in sufficient numbers, then to citizens of the United States, and every contract for such work shall contain a provision to this effect. Each county, town or district in the construction of public works, or persons contracting or subcontracting for such works, shall give preference to veterans and citizens who are residents of such county, town or district.

- 2.1.2** The rate per hour of the wages paid to said mechanics and apprentices, teamsters, chauffeurs and laborers in the construction of public works shall not be less than the rate or rates of wages to be determined by the Commissioner of Labor and Industries as hereinafter provided; provided that the wages paid to laborers employed on said works shall not be less than those paid to laborers in the municipal service of the town or towns where said works are being constructed; provided further, that where the same public work is to be constructed in two (2) or more towns, the wages paid to laborers shall not be less than those paid to laborers in the municipal town paying the highest rate; provided further, that if, in any of the towns where the works are to be constructed, a wage rate or wage rates have been established in certain trades and occupations by collective agreements or understandings between organized labor and employers, the rate or rates to be paid on said works shall not be less than the rates so established; provided further, that in towns where no such rate or rates have been established, the wages paid to mechanics, teamsters, chauffeurs and laborers on public works shall not be less than the wages paid to the employees in the same trades and occupations by private employers engaged in the construction industry. This section shall also apply to regular employees of the Commonwealth or a county, town or district, when such employees are employed in the construction, addition to or alteration of public buildings for which special appropriations of more than one thousand (\$1,000.00) dollars are provided. Payments by employers to health and welfare plans, pension plans and supplementary unemployment benefit plans under collective bargaining agreements or understandings between organized labor and employers shall be included for the purpose of establishing minimum wage rates as herein provided.
- 2.2** List of Jobs; Classifications; Determination of Rate of Wages; Schedule: (Statutory reference: M.G.L. Chapter 149, Section 27). This Paragraph 2.2. applies to every contract or subcontract for the construction of public works by the Commonwealth, or by a county, town or district.
- 2.2.1** The Commissioner of Labor and Industries shall prepare, for the use of such public officials or public bodies whose duty it shall be to cause public works to be constructed, a list of the several jobs usually performed on various types of public works upon which mechanics and apprentices, teamsters, chauffeurs and laborers are employed. The Commissioner shall classify said jobs, and he may revise such classifications from time to time, as he may deem advisable. Prior to awarding a contract for the construction of public works, said public official or public body shall submit to the Commissioner a list of the jobs upon which mechanics and apprentices, teamsters, chauffeurs and laborers are to be employed, and shall request the Commissioner to determine the rate of wages to be paid on each job. The Commissioner, subject to the provisions of Paragraph 2.1 of these Supplementary General Conditions, shall proceed forthwith to determine the same, and shall furnish said official or public body with a schedule of such rate or rates of wages as soon as said determination shall have been made. In advertising or calling for bids for

said works, the Awarding Authority or public body shall incorporate said schedule in the advertisement or call for bids by an appropriate reference thereto, and shall furnish a copy of said schedule without cost, to any person requesting the same. Said schedule shall be made a part of the contract for said works and shall continue to be the minimum rate or rates of wages for said employees during the life of the contract. Any person engaged in the construction of said works shall cause a legible copy of said schedule to be kept posted in a conspicuous place at the site of said works during the life of the contract. The aforesaid rates of wages in the schedule of wage rates shall include payments by employers to health and welfare plans, pension plans and supplementary unemployment benefit plans as provided in the previous section, and such payments shall be considered as payments to persons under this section performing work as herein provided. Any employer engaged in the construction of such works who does not make payments to a health and welfare plan, a pension plan and supplementary unemployment benefit plan, where such payments are included in said rates of wages, shall pay the amount of said payments directly to each employee engaged in said construction. Note: The Awarding Authority does not guarantee the accuracy of any schedule of wage rates furnished to the Contractor hereunder, and the Contractor shall be responsible for ascertaining the prevailing wages in the area where the work will be performed.

- 2.3** Employment Records To Be Kept By Contractor, Subcontractors; Statement of Compliance: (Statutory reference: M.G.L. Chapter 149, Section 27B). This Paragraph 2.3 applies to every contract or subcontract for the construction of public works by the Commonwealth, or by a county, town or district.
- 2.3.1** Every Contractor, Subcontractor or public body engaged in said public works to which Paragraph 2.3 of these Supplementary General Conditions applies shall keep a true and accurate record of all mechanics and apprentices, teamsters, chauffeurs and laborers employed thereon, showing the name, address and occupational classification of each such employee and shall furnish to the Commissioner of Labor and Industries, upon his request, a copy of said record, signed by the employer or his authorized agent under the penalties of perjury. Such records shall be open to inspection by any authorized representative of the Department of Labor and Industries at any reasonable time, and as often as may be necessary.
- 2.3.2** Each such Contractor, Subcontractor or public body shall preserve its payroll records for a period of three (3) years from the date of completion of the contract.
- 2.3.3** Each such Contractor, Subcontractor or public body shall furnish to the Commissioner of Labor and Industries within fifteen (15) days after completion of its portion of the work a statement, executed by the Contractor, Subcontractor, or public body who supervises the payment of wages, in the following form.

STATEMENT OF COMPLIANCE

I \_\_\_\_\_  
(Name of Signatory Party) (Title)

Do hereby state:

That I pay or supervise the payment of the persons employed by

\_\_\_\_\_  
(Contractor, Subcontractor or Public Body)

On the \_\_\_\_\_ and that all mechanics  
(Building or Project)

And apprentices, teamsters, chauffeurs and laborers employed on said project have been paid in accordance with wages determined under the provisions of Sections 26 and 27 of Chapter 149 of the General Laws.

Signature \_\_\_\_\_

Title \_\_\_\_\_

The above-mentioned copies of payroll records and statements of compliance shall be available for inspection by any interested party filing a written request to the Contractor for such inspections.

**2.4** Wages Paid to Operators of Trucks and Other Equipment: (Statutory reference: M.G.L. Chapter 149, Section 27F). This Paragraph 2.4 applies to every contract for the construction of public works by the Commonwealth, or by a county, city, town or district.

**2.4.1** Prescribed rates of wages, as determined by the Commissioner of Labor and Industries, shall be paid to the operators of all trucks, vehicles or equipment employed on the Project. Said rates of wages shall be requested of said Commissioner by the Awarding Authority and shall be furnished by the Commissioner in a schedule containing the classification of jobs, and the rate of wage to be paid for each job. Said rates of wages shall include payments to health and welfare plans, or, if no such plan is in effect between employers and employees, the amount of such payments shall be paid directly to said operators.

**2.5** Reserve Police Officers: (Statutory reference: M.G.L. Chapter 149, Section 34B). This Paragraph 2.5 applies to every contract for the construction, alteration, maintenance, repair or demolition of, or addition to, any public works for the Commonwealth or any political subdivision thereof.

**2.5.1** The contractor shall pay to any reserve police officer employed by him in any city or town the prevailing rate of wages paid to regular police officers in such city or town.

- 2.6** Eight-Hour Day, etc.: (Statutory reference: M.G.L. Chapter 149, Sections 30, 34, and 34A). This Paragraph 2.6 applies only to contracts, which are subject to the provisions of the aforesaid Sections of the Massachusetts General Laws.
- 2.6.1** No laborer, worker, mechanic, foreman or inspector working within this Commonwealth in the employ of the Contractor, Subcontractor or other person doing or contracting to do the whole or part of the work contemplated by the contract, shall be required or permitted to work more than eight (8) hours in any one (1) day or more than forty-eight (48) hours in any one (1) week, or more than six (6) days in any one (1) week, except in cases of extraordinary emergency.
- 2.7** Lodging, etc.: (Statutory reference: M.G.L. Chapter 149, Section 25). This paragraph 2.7 applies to every contract for the doing of public work with the Commonwealth, a county, city or town, or with a department, board, commission, or officer acting therefore.
- 2.7.1** Every employee under this contract shall lodge, board and trade where and with whom he elects, and neither the Contractor nor his agents or employees shall, either directly or indirectly, require as a condition of the employment of any person that the employee shall lodge, board or trade at a particular place or with a particular person.
- 2.8** Access to Contractor's Records: (Executive Order No. 195). This Paragraph 2.8 applies to every contract for the purchase of services or materials by any agency, bureau, board, commission, institution, or department of the Commonwealth or a municipal contract funded, in whole or in part, by the Commonwealth.
- 2.8.1** The Governor or his Designee, the Secretary of Administration and Finance, and the State Auditor or his Designee shall have the right at reasonable times and upon reasonable notice to examine the books, records and other compilations of data of the Contractor which pertain to the performance and requirements of this contract.
- 2.9** Worker's Compensation Insurance: (Statutory reference: M.G.L. Chapter 149, Section 34). This Paragraph 2.9 applies to every contract for the construction, alteration, maintenance, repair or demolition of, or addition to, any public building or other public works for the Commonwealth or any political subdivision thereof.
- 2.9.1** The Contractor shall, before commencing performance of the contract, provide by insurance for the payment of and the furnishing of other benefits under M.G.L. Chapter 152 to all persons to be employed under the contract, and the Contractor shall continue such insurance in full force and effect during the term of the contract. Sufficient proof of compliance with this Paragraph 2.9 must be furnished at the time of execution of this contract. Failure to provide and continue in force such insurance as aforesaid shall be deemed a material breach of the contract and shall operate as an immediate termination thereof. No cancellation of such insurance, whether by the insurer or by the insured, shall be valid unless written notice thereof is given by the party proposing cancellation to other party and to the Awarding Authority at least fifteen (15) days prior to the intended effective date thereof, which date shall be expressed in said notice.

### **ARTICLE 3 - CONTRACTOR'S ACCOUNTING METHOD REQUIREMENTS**

- 3.1** (Statutory reference: M.G.L. Chapter 30, Section 39R). This Article 3 applies to "Contracts" and "Contractors", as defined in Subparagraph 3.1.1 and 3.1.2, below.
- 3.1.1** "Contractor" means any person, corporation, partnership, joint venture, sole proprietorship, or other entity awarded a contract pursuant to Section 39M of Chapter 30, Sections 44A-44J inclusive, of Chapter 149, and Sections 30B-30P, inclusive, of Chapter 7.
- 3.1.2** "Contract" means any contract awarded or executed pursuant to Sections 30B-30P, inclusive, of Chapter 7, and any contract awarded or executed pursuant to Section 39M of Chapter 30, or Sections 44A-44H, inclusive, of Chapter 149, which is for an amount or estimated amount that exceeds the dollar amount set forth in M.G.L. Chapter 30, Section 39R.
- 3.1.3** "Records" means books of original entry, accounts, checks, bank statements and all other banking documents, correspondence, memoranda, invoices, computer printouts, tapes, discs, papers and other documents or transcribed information of any type, whether expressed in ordinary or machine language.
- 3.1.4** "Independent Certified Public Accountant" means a person duly registered in good standing and entitled to practice as a certified public accountant under the laws of the place of his/her residence or principal office who is in fact independent. In determining whether an accountant is independent with respect to a particular person, appropriate consideration should be given to all relationships between the accountant and that person or any affiliate thereof. Determination of an accountant's independence shall not be confined to the relationships existing in connection with the filing of reports with the Awarding Authority.
- 3.1.5** "Audit", when used in regard to financial statements, means an examination of records by an independent certified public accountant in accordance with generally accepted accounting principles and auditing standards for the purpose of expressing a CERTIFIED opinion thereon, or, in the alternative, a qualified opinion or a declination to express an opinion for stated reasons.
- 3.1.6** "Accountant's Report", when used in regard to financial statements, means a document in which an independent certified public accountant indicates the scope of the audit which he/she has made and sets his/her opinion regarding the financial statements taken as a whole with a listing of noted exceptions and qualifications, or an assertion to the effect that an overall opinion cannot be expressed. When an overall opinion cannot be expressed, the reasons therefore shall be stated. An accountant's report shall include as a part thereof a signed statement by the responsible corporate officer attesting that management has fully disclosed all material facts to the independent certified public accountant, and that the auditing financial statement is a true and complete statement of the financial condition of the Contractor.
- 3.1.7** "Management", when used herein, means the chief executive officers, partners, principals or other person or persons primarily responsible for the financial and operational policies and practices of the Contractor.

- 3.1.8** Accounting terms, unless otherwise defined herein, shall have a meaning in accordance with generally accepted accounting principles and auditing standards.
- 3.2** Subparagraph 3.1.2 hereof notwithstanding, every agreement or contract awarded or executed pursuant to Sections 30B-30P, inclusive, of Chapter 7, and pursuant to Section 39M of Chapter 30 or to Sections 44A-44H, inclusive, of Chapter 149, shall provide that:
- 3.2.1** The Contractor shall make, and keep for at least six (6) years after final payment, books, records, and accounts, which in reasonable detail accurately and fairly reflect the transactions and dispositions of the Contractor.
- 3.2.2** Until the expiration of six (6) years after final payment, the Awarding Authority, office of inspector general, and the Deputy Commissioner of Capital Planning and Operations shall have the right to examine any books, documents, papers or records of the Contractor or his/her Subcontractors that directly pertain to, and involve transactions relating to, the Contractor or his/her Subcontractors.
- 3.2.3** If the agreement is a contract as defined herein, the Contractor shall describe any change in the method of maintaining records or recording transactions which materially affect any statements filed with the Awarding Authority, including in his/her description the date of the change and reasons therefore, and shall accompany said description with a letter from the Contractor's independent certified public accountant approving or otherwise commenting on the changes.
- 3.2.4** If the agreement is a contract as defined herein, the Contractor has filed a statement of management on internal accounting controls as set forth in Paragraph 3.3 below prior to the execution of the contract.
- 3.2.5** If the agreement is a contract as defined herein, the Contractor has filed prior to the execution of the contracts and will continue to file annually, an audited financial statement for the most recent completed fiscal year as set forth in Paragraph 3.5 below.
- 3.3** Every Contractor awarded a contract shall file with the Awarding Authority a statement of management as to whether the system of internal accounting controls of the Contractor and its subsidiaries reasonably assures that:
- 3.3.1** Transactions are executed in accordance with management's general and specific authorization;
- 3.3.2** Transactions are recorded as necessary;
- (1) To permit preparation of financial statements in conformity with generally accepted accounting principles, and
- (2) To maintain accountability for assets;
- 3.3.3** Access to assets is permitted only in accordance with management's general or specific authorization;

- 3.3.4** The recorded accountability for assets is compared with the existing assets at reasonable intervals and appropriate action was taken with respect to any difference.
- 3.4** Every Contractor awarded a contract shall also file with the Awarding Authority a statement prepared and signed by an independent certified public accountant, stating that he/she has examined the statement of management on internal accounting controls, and expressing an opinion as to:
- 3.4.1** Whether the representations of management in response to this paragraph and Paragraph 3.2 above are consistent with the result of management's evaluation of the system of internal accounting controls; and
- 3.4.2** Whether such representations of management are, in addition, reasonable with respect to transactions and assets in amounts, which would be material when measured in relation to the applicant's financial statements.
- 3.5** Every Contractor awarded a contract by the Commonwealth or by any political subdivision thereof shall annually file with the Awarding Authority during the term of the contract a financial statement prepared by an independent certified public accountant on the basis of an audit by such accountant. The final statement filed shall include the date of final payment. All statements shall be accompanied by an accountant's report.

#### **ARTICLE 4 - MISCELLANEOUS**

- 4.1** Weather Protection: This Paragraph 4.1 applies to every contract subject to M.G.L. Chapter 149, Section 44A.
- 4.1.1** The Contractor shall install weather protection and provide adequate heat in the protected area from November 1 to March 31, as required by M.G.L. Chapter 149, Section 44F(1).
- 4.2** Form for Sub-contract: This Paragraph 4.2 applies to every contract subject to M.G.L. Chapter 149, Section 44A.
- 4.2.1** The Contractor when sub-contracting with sub-bidders filed pursuant to M.G.L. Chapter 149, Section 44F shall use the form for sub-contract in Chapter 149, Section 44F(4)(c).
- 4.3** Foreign Corporations: This Paragraph 4.3 applies to every contract with the Commonwealth, a county, city, town, district, board, commission, or other public body for the construction, reconstruction, alteration, remodeling, repair, or demolition of any public building or other public works.
- 4.3.1** The Contractor, if a foreign corporation, shall comply with M.G.L. Chapter 181, Sections 3 and 5, and Chapter 30, Section 39L.
- 4.4** Shoring: (Statutory reference: M.G.L. Chapter 149, Section 129A). This Paragraph 4.4 applies to every construction project carried on by any city, town, county, or other subdivision of the Commonwealth in which a trench is to be dug to a depth of six and one-half (6 ½) feet which will be open less than forty-eight (48) hours, and except for digging of graves.

- 4.4.1** Trenches shall be shored and braced in conformity with rules and regulations relating thereto, adopted and enforced by the Department of Labor and Industries.
- 4.5** Certification of Compliance with Tax Laws: (Statutory reference: M.G.L. Chapter 62C, Section 49A). This Paragraph 4.5 applies to contracts for goods or services furnished by any department, board, commission, division, authority, district or other agency of the Commonwealth or any subdivision of the Commonwealth, including a city, town or district.
  - 4.5.1** By executing this contract, the Contractor certifies, under penalties of perjury, that to the best of his information, knowledge and belief he has complied with all laws of the Commonwealth relating to taxes.
- 4.6** Verification of Construction Debris Disposal: Worcester Revised Ordinances, Chapter 8, Section 7. This Paragraph 4.7 shall apply to every contract entered into by the City of Worcester for the demolition, renovation, rehabilitation, or alteration of a building or structure.
  - 4.6.1** In furtherance of the requirements set forth in M.G.L. Chapter 40, Section 54, and Section 114.1.3 of the Massachusetts State Building Code, the Code Director shall require any person who obtains a permit for the demolition, renovation, rehabilitation, or alteration of a building or structure to provide verification that the debris resulting from such activities was disposed of at the licensed solid waste facility named in conjunction with the permit application.
  - 4.6.2** The verification required under sub-section (a.), above, shall consist of the following:
    - 4.6.2.1** A dated receipt, signed by the owner/operator of the licensed solid waste disposal facility where the debris was deposited.
    - 4.6.2.2** The receipt shall contain a description of the debris disposed of, and its weight, or volume.
    - 4.6.2.3** The permit holder shall also provide the Code Director with an affidavit that the receipt submitted is true and accurate to the best of the permit holder's knowledge.
    - 4.6.2.4** If the permit holder cannot dispose of the debris at the location indicated, it shall be the permit holder's obligation to obtain an amendment to the permit reflecting the new disposal location. The Code Director shall be so notified, and the permit amended, prior to the disposal of the debris at the new disposal location.
  - 4.6.3** This Section shall not apply to the construction of a new building or structure.
- 4.7** Responsible Employer Ordinance: (Worcester Revised Ordinances, Chapter 2, Section 35) This paragraph shall apply to every contract entered into by the City of Worcester for the construction, reconstruction, installation, demolition, maintenance or repair of any building, where the contract amount is more than one hundred thousand dollars (\$100,000).

- 4.7.1** The city council hereby finds and determines that the failure of certain construction firms awarded contracts funded by the city to include and enforce provisions requiring compliance with state laws governing the payment of prevailing wages, the provision of workers compensation coverage, and the proper classification of individuals as employees and not as independent contractors, as well as provisions concerning health insurance coverage and state-certified apprenticeship programs, is injurious to the life, health and happiness of individuals employed by such firms and is deleterious to the quality of life in the city where most of such individuals reside.
- 4.7.2** Every contract awarded by the city under G.L. c. 149, § 44A(2) where the amount of the contract is more than one-hundred thousand dollars, and any subcontract awarded in connection with any such general contract where the amount of such subcontract is more than twenty-five thousand dollars, shall be deemed to incorporate by reference the provisions of sub-parts (1) through (6) of this subsection together with the provisions of subsections (c), (d) and (e) of this section.
- 4.7.2.1** The bidder and all subcontractors under the bidder shall comply with the city residents jobs ordinance codified as § 32 of chapter two of the Revised Ordinances of 1996;  
**(Compliance with the City Residents Jobs Ordinance is currently suspended)**
- 4.7.2.2** The bidder and all subcontractors under the bidder shall comply with the requirements of G.L. c. 149 concerning the payment of prevailing wage rates to their employees;
- 4.7.2.3** The bidder and all subcontractors under the bidder must maintain and participate in a bona fide apprentice training program as defined by G.L. c. 23, §§ 11H & 11I for each apprenticeable trade or occupation represented in its workforce that is approved by the division of apprentice training of the Department of Labor and Industries of the Commonwealth and must abide by the apprentice to journeymen ratio for each trade prescribed therein in the performance of the contract; COMPLIANCE WITH APPRENTICE TRAINING PROVISIONS OF THE RESPONSIBLE EMPLOYER ORDINANCE IS CURRENTLY SUSPENDED.
- 4.7.2.4** ' NOT USED  
|  
,  
,  
|
- 4.7.2.5** The bidder and all subcontractors under the bidder must maintain appropriate industrial accident insurance coverage in accordance with G.L. c. 152 for all individuals employed on the project;
- 4.7.2.6** The bidder and all subcontractors under the bidder must properly classify individuals employed on the project as employees rather than independent contractors and comply with all laws concerning workers' compensation insurance coverage, unemployment taxes, social security taxes and income taxes as respects all such employees.
- 4.7.3** All bidders and all subcontractors under such bidders who are awarded, or otherwise obtain, contracts from the city on projects governed by G.L. c. 149, § 44A(2), shall

comply with the obligations described in sub-parts (1) through (6) of subsection (b) of this section for the entire duration of their work on the project, and an officer of each such bidder or subcontractor under the bidder shall certify under oath and in writing on a weekly basis that they are in compliance with these obligations.

**4.7.4** Any bidder or subcontractor under the bidder who fails to comply with any of the obligations described in sub-parts (1) through (6) of subsection (b) of this section for any period of time or fails to comply with the weekly certification obligations described in subsection (c) of this section shall be subject to any or all of the following sanctions:

**4.7.4.1** Temporary suspension of work on the project until compliance is obtained; or,

**4.7.4.2** Withholding by the city of payment due under the contract until compliance is obtained; or,

**4.7.4.3** Permanent removal from any further work on the project; or,

**4.7.4.4** Recovery by the city from the general contractor of 1/10 of 1 % of the general contract or one thousand dollars (\$1000.00), whichever is greater, in the nature of liquidated damages assessed for each week that the general contractor is in non-compliance or, if a subcontractor is in non-compliance, the recovery by the City from the general contractor as a back-charge against the subcontractor of 1/10 of 1% of the subcontract price, or \$400.00, whichever is greater, in the nature of liquidated damages assessed for each week that the subcontractor is in non-compliance.

**4.7.5** In addition to these sanctions a general bidder or contractor shall be equally liable for any violation of the obligations described in sub-parts (1) through (6) of subsection (b) of this section committed by any of its subcontractors or sub-bidders, excepting only those violations which arise from work performed by subcontractors with subcontracts governed by G.L. c. 149, § 44F. Any contractor or subcontractor who has been determined to have violated any of the provisions of subsections (b) or (c) of this section shall be barred from performing any work on any future contracts awarded by the city for six (6) months for the first violation, three (3) years for the second violation, and permanently for a third violation.

**4.7.6** The provisions of this section shall not apply to construction projects for which the low general bid was less than one-hundred thousand dollars, (\$100,000) or to work performed pursuant to subcontracts governed by G.L. 149, §44F where the bid for such subcontract was less than twenty-five thousand dollars (\$25,000).

**4.8** Regulation of Construction Noise: (Worcester Revised Ordinances, Chapter 8, Section 34). This paragraph 4.8 shall apply to anyone operating powered construction equipment or delivering construction equipment and/or supplies at any construction site or project within the city of Worcester.

**4.8.1** It shall be unlawful for any person, firm, corporation, partnership, or other entity to warm up or operate powered construction equipment or to build, erect, construct, demolish, alter, repair, excavate or engage in hoisting, grading, site work, including tree and brush removal, dredging or pneumatic hammering, or to deliver construction equipment and/or supplies to the site on any building, road, tower, parking lot, machine, pipe, sewer,

sidewalk, or any other construction project (hereafter collectively the “construction project”), except between the hours of 7:00 a.m. and 9:00 p.m. on weekdays and Saturday, and between the hours 9:00 a.m. and 7:00 p.m. on Sundays except for “emergency work” which is performed in the interest of public safety or welfare and for which a permit has been issued by the commissioner of Code Enforcement (the Commissioner).

**4.8.2** Emergency work permits may be issued in:

**4.8.2.1** Cases of urgent necessity and for the interests of health, safety and convenience of the public. The Commissioner shall consider whether the reasons given for the urgent necessity are valid and reasonable, and whether the health, safety and convenience of the public will be protected or better served by granting the permit requested and whether the manner and amount of loss or inconvenience to the party in interest imposes a significant hardship; or,

**4.8.2.2** Cases where because the location and nature of the work the noise caused by said work will not be heard by anyone not working on the project. The Commissioner shall consider whether supplying machinery and/or materials to the construction project site will cause unreasonable noise along the routes to the construction project site, and whether such activity will impact residential neighborhoods, and shall not grant any emergency work permit unless unreasonable noise in residential areas will be prevented.

**4.8.2.3** Emergency work permits may be issued to the general contractor on a blanket basis that applies to all of the contractors working on the job, or may be issued to specific contractors on the construction project, at the discretion of the Commissioner. Emergency work permits may be issued for not more than one week at a time, and may be renewed for additional one-week periods at the discretion of the Commissioner.

**4.8.2.4** Prior to issuing or reissuing said emergency work permit the Commissioner shall review the work being conducted and all attendant circumstances, and shall prescribe whatever limitations possible to minimize the generation of noise, and to minimize the impact of noise on the neighbors to the construction project.

**4.8.2.5** Emergency repair work performed by the Department of Public Works and/or any public utility is exempt from this section.

**4.8.2.6** The fee for each such Emergency work permits issued under this section shall be set in accordance with Chapter 2, § 24 of these ordinances.

**4.8.2.7** On any project for the construction, construction, installation, demolition, maintenance or repair of any building, or public work, to be funded in whole or in part by city funds, or funds which, in accordance with a federal or state grant, program, or otherwise, the city expends or administers, or any such project to which the city is a signatory to the contract therefore, the provisions of this section shall apply and the same shall be referenced in every invitation to bid for such project and, the following paragraphs shall be contained in every resulting contract there from:

- (1) “It shall be a material breach of this contract if the contractor and each subcontractor on shall not at all times adhere to the provisions of § 34 of chapter eight of the

Revised Ordinances of the city, by limiting their on-site, noise producing construction and related work to the hours specified by the Ordinance.

- (2) A waiver from the above requirements may, in certain circumstances, be granted in accordance with subsections (b), (c) and (d) of § 34 of chapter eight of the Revised Ordinances of the city.”

**4.8.2.8** The Commissioner of the Department of Code Enforcement shall have the authority to adopt any rules and regulations he or she deems necessary to implement this section.

**4.8.2.9** Nothing in this section shall be deemed to prevent an individual from performing work on his or her own property, so long as the work is being done by the owner of the property or by direct relatives of the owner, and said work is not being done for profit.

**4.8.2.10** This ordinance may be enforced by any Building Inspector and/or Health and Code Inspector assigned by the Commissioner of the Departments of Public Health and Code Enforcement and the Police Department.

**4.8.2.11** Any violation of this ordinance by any person, firm, corporation, partnership, or other entity, shall be individually punished with a fine of \$100.00. Each day upon which a violation of this ordinance occurs shall be considered a separate violation. Employers shall be deemed the violator for violations committed by their employees.

**END OF SECTION 00300**

Section 00 73 00

**SUPPLEMENTARY INSTRUCTIONS TO  
BIDDERS**

These Supplementary Instructions to Bidders are intended to assist bidders in establishing items of work required as part of performance of their scope of work and shall be considered by trade contractors and non-trade contractors alike in the preparation of bids.

The items listed in this section are not intended to represent a complete list of work items to be performed under the referenced subcontractor's scope of work, rather they are intended to supplement language already included in the specifications and provide additional information to assist subcontractors in the preparation of bids.

Should any subcontractor require further clarification prior to submission of a bid, forward a Request for Information to Fontaine Bros. immediately.

**Index**

- 1. General Requirements and Inclusions for ALL Subcontractors**
- 2. Procedures and Requirements for Submission of Bids**
- 3. Submittals**
- 4. Schedule**
- 5. Meetings**
- 6. Safety**
- 7. Payments & Requisitions**
- 8. Change Orders**
- 9. Housekeeping**
- 10. Hoisting, Staging, Unloading**
- 11. Logistics**
- 12. Closeout**
- 13. Trade Specific Scope Notes**

- 1. General Requirements and Inclusions for ALL Subcontractors (Trade and Non-Trade).**

1. All components of these Supplementary Instructions to Bidders shall apply to all subcontractors. Provisions to comply with these conditions shall be included in bids.
2. In the Contract Documents, the word "Contractor", "General Contractor", "Trade Contractor" or "Subcontractor" shall mean and shall be interpreted as being the "Subcontractor" or "Trade Contractor" whose scope of work includes that portion of the work or specifications. In the event that work of a specification section is spread over several "scopes of work", each requirement shall apply to the subcontractor in regard to work being performed under their scope of work.
3. Subcontractors are responsible for complete and comprehensive review of contract drawings and specifications. Bid prices are assumed to include labor, materials, insurance, taxes, fees, and all other costs associated with delivering the complete scope of work in proper working order in accordance with the contract documents.
4. If a conflict exists between the drawings and specifications or within either document itself, the better quality or greater quantity of work shall be included in the subcontractor's bid. An RFI should be submitted immediately upon discovery of any such conflict. If an RFI is not submitted and work is commenced, this is done at the subcontractor's risk.
5. Whenever the contract documents require a professional engineer's stamp, review or

SUPPLEMENTARY INSTRUCTIONS TO BIDDERS

- report, it shall be understood to mean a Professional Engineer licensed and registered in the Commonwealth of Massachusetts.
6. Subcontractors shall be responsible for all permits, including associated fees, to complete their work (except the General Building Permit) and shall be responsible for coordinating, scheduling, and completing the associated inspections within the time period allotted for construction of their trade on the project schedule. Inspections shall be coordinated and completed in advance of contract dates when possible and at no extra cost at the direction of Fontaine Bros. Participate with the inspection walk throughs as required by the contract and as requested by the Construction Manager. Provide suitable access for inspectors to perform all tests or inspections. Contractor supplied temporary ladders and lifts to perform their work are to be available for the use of all parties.
  7. Subcontractors shall be responsible for all local hot work permits, fire watch details, and police details as may be required for their own work. Welders to obtain City of Worcester Welding Certificates. Subcontractors requiring a hot work permit must provide proof of completed training. Training shall be approved by the State Fire Marshal.
  8. Project communications, during both the bid and construction stages, shall be directed to Fontaine Bros. Direct communication with the design team, owner, owner's project manager etc. is prohibited.
  9. All employees on the worksite must have completed OSHA 10 Training.
  10. Theft or vandalism of tools, equipment, materials, etc. are not the responsibility of Fontaine Bros.
  11. Subcontractors shall provide offsite storage of all materials until installation, unless previously authorized by Fontaine Bros. to deliver and store materials on site. Materials brought to site must be palletized for ease of relocation at the direction of the CM to facilitate construction activities.
  12. Subcontractors whose scope of work includes the installation of materials shall include ALL fasteners, adhesives, and other components necessary for the complete a functional installation of materials within their scope of work UNLESS any of these components are specifically designated to another scope of work.
  13. CM to provide access to electronic documents, including CADD files after waiver is signed and returned. Subcontractor shall be responsible for procurement/maintenance of hard copy and electronic drawings, specifications, and shops drawings.
  14. CM to provide access to Procore project site, subcontractor to monitor project information and communications to identify and respond to all information including changes affecting their scope of work.
  15. Subcontractor is responsible for layout, CM will provide control points.
  16. All cutting/patching in masonry is by Masonry Subcontractor. All cutting/patching in other surfaces is by the subcontractor requiring the surfaces to be cut. All holes through structural steel noted on the contract set shall be located by subcontractors as part of the coordination documents for fab/install by steel subcontractor.
  17. All fire caulking and acoustical sealant at mechanical penetrations is by subcontractor requiring penetrations. All fire caulking and acoustical sealant not at mechanical penetrations is by drywall subcontractor. Mechanical subcontractors shall include Fire Protection, Plumbing, HVAC, Electrical subcontractor and their sub subcontractors.
  18. Subcontractor shall provide mock ups per specifications; subcontractor shall provide standalone mockups unless in place mockups are expressly permitted.
  19. There will be a mockup classroom completed inside of the building. Construction of the mockup room will be completed out of sequence and will be used for quality review and standard for all future construction.
  20. Subcontractors are responsible for provision of power for their equipment if equipment cannot be powered by available on-site sources. Electrical subcontractor

SUPPLEMENTARY INSTRUCTIONS TO BIDDERS

- responsible for hooking up all equipment including special equipment such as masonry saws, grinders, and temporary heat equipment.
21. Subcontractors shall be responsible for any water required to operate their equipment that is not readily available on site. Temporary water may be used as available.
  22. Subcontractors shall be responsible for providing their employees with drinking water.
  23. All trades shall provide suspension systems/hangers/supports/seismic restraints as required for their respective equipment and work.
  24. Subcontractors shall provide their own task lighting required to complete their scope of work. Temporary construction lighting/power meeting or exceeding OSHA standards and as dictated in the specifications shall be provided by the electrical subcontractor.
  25. Deliveries shall be coordinated with Fontaine's site Superintendent a minimum of 48 hours in advance.
  26. Subcontractor work hours shall be between 7:00 AM and 5:00 PM, Monday through Saturday. Work shall not begin prior to 7:00 or continue past 5:00 PM Monday through Saturday nor shall work be performed on Sunday without previous permission from Fontaine Bros. and the City of Worcester. Work hours shall not be changed unless unusual circumstances require adjustment.
  27. Consideration will be given to all SOMWBA certified subcontractors, materials suppliers, fabricators, and service providers on this project.
  28. Review job conditions prior to commencing work. Advise Fontaine of any unacceptable conditions; commencement of work indicates subcontractor accepts job conditions.
  29. Contractual warranties shall commence upon the date that Fontaine Bros receives a Certificate of Occupancy for the building or date of final acceptance of system by OWNER, whichever is later. Subcontractor shall provide all necessary extended warranties to account for the time period from the completion of their work through July 1, 2021. Site Finishes warranty will begin June 1, 2022.
  30. Subcontractor shall provide Construction Daily Reports detailing daily manpower, activities and locations for subcontractor's work, and work of all employees and subcontractors for which this contractor is responsible. Reports shall be filled out and emailed to Fontaine daily.
  31. The CM shall have the right to assemble subcontractor personnel for orientation, quality, and safety related matters at no additional cost.
  32. Each subcontractor shall keep a sign-in book for their workers. Each worker must sign in and out daily and copies of the daily logs must be submitted to Fontaine Bros. on a weekly basis.
  33. Subcontractor shall provide any power required to perform work outside of the building. Outside power will not be provided by the Owner/Construction Manager.
  34. Each subcontractor is required to adhere to, participate in, and provide all items as described in the Indoor Air Quality Management Plan. Strict adherence to this plan is required by each subcontractor. Subcontractors shall take date stamped photos documenting compliance with such measures such as protection of absorptive materials, protection of ductwork, and source separation.
  35. Each subcontractor is responsible for provision of, coordination of, and installation of sleeving/penetrations required for their work in foundation walls, decking, slabs, walls and the like. Subcontractor whose system requires sleeving/penetrations shall be responsible for any coring, cutting, patching required for installation of your work if sleeving is not coordinated with other subcontractor at appropriate time. Sleeving required in early release package installations that is required to be furnished/installed prior to procurement of appropriate trades shall be furnished/installed by early release subcontractor whose assembly requires sleeving/coring. Subcontractors must coordinate to sleeves/cores located by early release subcontractor or provide new sleeves/cores in an alternate location.

Abandoned sleeves/cores must be repaired/patched by the subcontractor abandoning the penetration. Subcontractors are responsible for all coring associated with completing their scope of work. Holes greater than 4" shall not be cored without prior approval by CM.

36. Fontaine Bros. shall have discretion and authority to terminate subcontracts without recourse if, in the discretion of Fontaine Bros., the subcontractor in question is not fulfilling contract obligations including meeting schedule, manpower, material procurement or other goals/criteria.
37. Site subcontractor shall include snow removal for access and staging/storage areas and for access to staging and storage area as directed by Fontaine, including hand removal at trailers/entrances etc, for the duration of the project. Site contractor owns sanding site for access following snow or ice events. Each subcontractor shall provide snow removal for their own work.
38. Costs for material escalation shall be included in bid proposals. Costs for material escalation including asphalt, drywall, etc. shall be at the risk of the subcontractor.
39. All subcontractors shall take precautions against damaging the work of other trades including roofing. In the event that work is performed on the roof, subcontractors shall provide protection of the roof membrane to ensure that their work/materials does not puncture the roof membrane. In the event that subcontractors fail to provide protection or damage the roofing membrane, costs for repairs shall be borne by the offending subcontractor(s).
40. All subcontractors shall make provisions to provide a working computer for their foreman on site. Computer shall have access to the internet and shall also provide access to BIM model in the event that subcontractors are of mechanical trades. Subcontractors shall use computer to access shop drawings, submittals, etc. as necessary.
41. Manufacturer, supplier, and or subcontractor requirements that must be met prior to material delivery, installation, or fabrication must be made available to CM for review prior to acceptance of subcontractor's bid. Requirements not spelled out in the contract documents that are brought to the attention of the CM at a later date will not be considered. These include requirements having to do with building climate, warranties, and project specific conditions.
42. No person shall perform testing on site or related to the project without the prior direction and permission of the project team.
43. There shall be no deliveries or vehicles entering or exiting the site during busy hours at the school. Subcontractors shall adhere to a "blackout period" between 7:00 am and 7:30 am and between 1:30 pm and 2:30 pm while school is in session. CM has the discretion to modify the blackout hours as necessary to facilitate work.
44. Subcontractors shall not park on Apricot Street, the Worcester South Community School parking lots, the Sullivan Middle School parking lots, or any streets adjacent to the project site. Offsite parking and shuttling, if required, shall be paid for and arranged by subcontractors.
45. References to any project other than **Worcester South Community High School** are understood to be errors. Subcontractor shall assume to all references in specification apply to **Worcester South Community High School**, located in Worcester, MA.
46. All subcontractor personal working on site will be required to complete a Criminal Offender Record Information (CORI) check. Employment on site is subject to results of the CORI check. All CORI applications shall be submitted two weeks prior to starting on site.
47. All references in the contract documents to the Construction Manager/General Contractor as performing any field work or providing services in connection with any aspect of the work shall be understood to mean the subcontractor.

## **2. Procedures and Requirements for Submission of Bids**

1. Subcontractors shall submit bids for the project on the bid forms provided by Fontaine Bros. or the owner and in accordance with the instructions to bidders in the specifications. Bids shall include the complete scope of work included in each subcontractors bid package, exclusions shall not be considered.
2. By submitting a bid, subcontractor certifies that they have included provisions for complying with these supplementary instructions to bidders. Furthermore, subcontractor agrees to abide by these supplementary instructions to bidders. Subcontractor understands that execution of a contract certifies acceptance of these supplementary instructions to bidders.
3. Subcontractors submitting bids shall hold their bids for a minimum of 90 days.

### **3. Submittals**

1. This project will utilize Procore for document distribution and processing. Subcontractors will be given access to Procore upon contract award, and shall be furnished either instructions for use or, when available, given access to online training sessions regarding operation of the Procore website. All project communications must be submitted through Procore. Subcontractors shall be given access to Procore and shall pay no fee for access.
2. It is the intent of the project team to process and distribute documents electronically to the fullest extent possible. Subcontractors shall provide shop drawings, submittals, product data sheets, MSDS sheets, etc. in electronic format acceptable to the project team. In the event that shop drawings are large format, such as structural steel, millwork, etc., subcontractor shall provide up to (4) hard copies of each submission at no additional cost to the project. Hard copies of approved/corrected shop drawings shall be provided upon request by the CM at no additional cost. Color charts, physical samples, etc. shall be delivered hard copy with a transmittal and photo of each sample uploaded to Procore as a means to track the sample approval and/or color selection.
3. The Construction Manager shall maintain a database of electronic files available for access by subcontractors on the Procore website; subcontractors shall be responsible for reviewing electronic documents and taking appropriate action to ensure the incorporation of all project documents including RFI's, ASI's, etc. into their work. In addition, the construction manager may elect to utilize a Bluebeam Studio of electronic files available for access by subcontractors; subcontractors shall be responsible for reviewing electronic documents and taking appropriate action to ensure the incorporation of all project documents including RFI's, PR's, ASI's, etc. into their work.
4. Within (14) days of written notice of intent, subcontractor shall provide via email to Fontaine Bros. a submittal schedule for their work. Submittal schedule shall be in the format provided by Fontaine Bros. Failure to provide submittal schedule within (14) days of notice of intent shall result in payments to subcontractor being held until satisfactory submittal schedule is provided.
5. Within (14) days of written notice of intent, subcontractor shall provide via email to Fontaine Bros. a list of Long Lead Items to be procured under the scope of the subcontractor. Long Lead Items shall be defined as any item that requires more than (30) days from the time the item is approved and ordered until the item is delivered on site. Failure to provide a list of Long Lead Items within (14) days of intent shall result in payments to subcontractor being held until satisfactory list of Long Lead Items is provided.
6. Submittals for all contractors shall be due no later than 4 weeks from the date of notice of intent to award subcontractor.
  - a. Submittals for roof top units, air handling units, and other equipment requiring

---

**SUPPLEMENTARY INSTRUCTIONS TO BIDDERS**

---

coordination with the steel subcontractor, shall be due no later than 6 weeks from the date of notice of intent to award to subcontractor. Resubmittals for all subcontractors shall be due within 1 week after submittal is returned for revision.

- b. All samples for finishes requiring color selection by the design team shall be submitted within 4 weeks of notice of intent to award. Physical samples shall include the full range of colors available for each product and as outlined in the construction documents.

#### **4. Schedule**

1. Time is of the essence on this project, and subcontractors shall provide adequate manpower necessary to complete their scope of work within schedule durations outlined on Fontaine's construction schedule included within these bid documents. By submitting a bid, subcontractors acknowledge that they have reviewed the project schedule and included in their bids adequate manpower including overtime as may be necessary to achieve these durations.
2. Any overtime required to meet scheduled completion dates shall be provided at subcontractor's expense.
3. Subcontractors shall provide three week look ahead schedules in advance of weekly foremen's meeting on site. Subcontractors shall be responsible for reviewing schedules with Fontaine management and adhering to schedules. Subcontractors shall make adjustments to better schedules if possible and at the direction of Fontaine management.
4. Subcontractor shall perform all work within their scope in full cooperation with other trades and coordinate the schedule and sequence of work with all other trades under the direction of Fontaine's management team. When so directed, subcontractor shall temporarily omit, or perform certain portions of the work out of normal sequence, in order to accommodate schedule requirements. Claims for additional monies as a result of out of sequence work shall not be considered by Fontaine.
5. All mobilizations necessary to complete the work are to be included as part of the subcontractor's bid.
6. The subcontractor acknowledges that adjustments to the schedule may be required by all parties as construction progresses. Subcontractor agrees to accomplish adjustments at no increase in price.
7. It is understood that multiple crews will be required to perform concurrent work in different areas.
8. It is understood that utility shutdowns may have to be scheduled outside the normal work day. Any and all costs for this shall be included in bids.
9. No extension of time shall be granted because of seasonal or abnormal variations in temperature, humidity, or precipitation, which conditions shall be wholly at the risk of the subcontractor, whether occurring within the time originally scheduled for completion or within the period of any extension granted. There shall be no increase in the contract sum on account of any additional costs of operations or conditions resulting there from.
10. In the event of inclement weather, subcontractors shall make a determination as to whether they will require their tradespeople to report to work. There will be no compensation for such lost work days, and, at no cost to the owner/CM, the subcontractor shall make up the lost time through overtime, additional crews, or by other means necessary.

#### **5. Meetings**

1. Fontaine, at their discretion, may conduct multiple "kick-off" meetings including, but not limited to, a Green Building Kick-Off Meeting, a Project Schedule Kick-Off

Meeting, a Safety Kick-Off Meeting, and others deemed appropriate. Subcontractors shall arrange for a representative of their firm authorized to make binding commitments to be present at these meetings. Subcontractors shall be notified a minimum of five days prior to these meetings, and attendance is required unless otherwise directed by the Construction Manager.

2. Fontaine, at their discretion and in conjunction with the architect/OPM/Cx etc, shall hold preconstruction meetings for individual trades/work items. Subcontractors notified of meetings shall be required to attend as a prerequisite to starting or in some cases continuing work. When requested, subcontractors shall arrange for a representative of their firm authorized to make binding commitments to be present at these meetings. Attendance at these meetings is mandatory.
3. Fontaine shall conduct weekly meetings to review schedule, safety, logistics, and other relevant construction issues. At least once per week, each subcontractor notified by Fontaine shall arrange for a project manager responsible for the subcontractor's operations and able to make binding commitments to be present on site for a meeting. In addition to this project manager, subcontractor foreman shall attend this weekly meeting.
4. In the event that a subcontractor is notified of their required attendance at an onsite meeting, and the subcontractor fails to provide a project manager or foreman as required, Fontaine shall issue a written notice of non-compliance. In the event that a subcontractor fails a second time, Fontaine shall issue a fine of \$500. Fontaine shall issue a fine of \$500 for each subsequent failure, and these fines shall not be subject to appeal.

## **6. Safety**

1. Fontaine's Site-Specific Safety Program shall be strictly enforced. Subcontractors are responsible for reviewing the Safety Program provided in these documents and complying with the plan and OSHA standards.
2. All workers shall review new employee orientation requirements and sign, date and return a completed new employee orientation form to Fontaine Bros. site superintendent prior to commencing work on site.
3. Subcontractors shall provide (3) copies of their written safety plan on site at all times. (1) copy shall be maintained in the Fontaine Field Office, (1) copy shall be maintained in the subcontractor field office, and (1) copy shall be kept on site/in the building for the foreman to reference as construction progresses. It is the responsibility of each subcontractor to provide their written safety plan before commencing work on site.
4. A fall protection system that meets or exceeds OSHA Regulations is to be provided and maintained by each subcontractor at all times. Details of the fall protection program must be included in the written safety plan. All components of fall protections systems for each trade including anchors, lanyards, and harnesses are to be furnished, installed, maintained, and removed by each individual trade utilizing the fall protection system.
5. Subcontractors shall provide appropriate MSDS sheets to Fontaine's superintendent whenever delivering materials to the site. A complete MSDS book shall be kept on site at all times, containing MSDS sheets for all materials that are stored or being used on site.
6. All tools & equipment powered by electricity used by subcontractors are required to have ground fault circuit interrupters, supplied and maintained by the respective subcontractors. When using permanent power supply, the GFCI protection must be supplied and maintained by respective subcontractors as necessary.
7. No radios will be allowed on site. No headphones shall be worn on site. Hearing protection is acceptable for safety purposes only. Hearing protection shall be supplied by subcontractors for their employees.

8. All employees on site shall wear hard hats and high visibility clothing at all times. All employees shall wear safety glasses for task specific hazard protection. Subcontractor shall supply their employees with all required safety material.
9. Employees working outside of the building shall wear reflective safety vests at all times.
10. Subcontractor shall supply their employees with all required safety material.
11. Subcontractors shall supply employees with personal protective equipment such as safety glasses, face shields, respirators, gloves, concrete boots, etc. to be worn when appropriate.
12. All subcontractors shall comply with 6' fall protection rules. All fall protection equipment, including tie off points, shall be furnished and installed by subcontractors and shall be supplied by each employer.
13. Subcontractor shall adhere to all applicable safety regulations and shall be responsible for complying with safety requirements as defined in Section 13 of the General Conditions of the CM at Risk Contract as it relates to subcontractors' work on site.
14. Subcontractors shall furnish, install, maintain and remove tie downs and harnesses etc. for work that requires them. Roofer shall be responsible for patching holes in roof after tie downs are removed.

## **7. Payments and Requisitions**

1. Subcontractors shall submit a schedule of values to Fontaine Bros. within (14) days of receipt of subcontract/purchase order. Schedule of values shall be broken down to separate labor and material costs and shall reference either work components (i.e. reception desk for millwork), or work areas (i.e. Brick Veneer, CL 1-3/5/A5.1)
2. In addition to labor and material, each subcontractor Schedule of Values shall include line items for the following
  - a. Shop Drawings
  - b. Submittals
  - c. Coordination Drawings (if applicable)
  - d. LEED Compliance
  - e. Safety (3% of contract sum)
  - f. Daily Clean Up (3% of contract sum)
  - g. Closeout
  - h. Commissioning for applicable trades
3. If a mobilization line item is included, a demobilization line item of equal value shall be required.
4. Monthly Requisitions shall be emailed to Fontaine Bros. no later than 5:00 p.m. on **the third Thursday of each month**. Requisitions **must** be emailed to [AP@FontaineBros.com](mailto:AP@FontaineBros.com) , as well as to the Project Manager's email address. Requisitions not received by the third Thursday of the month to both email addresses may not be included in that month's requisition.
5. Stored materials shall be billed and paid for in accordance with the requirements of the project specifications.
6. Retainage of 5% shall be held in accordance with project specifications.
7. Requisition review and payment procedures shall be governed by applicable Mass General Laws.
8. Requisitions will be reviewed by the project team and in the event that the design team/owner determines not to pay a requisition or line item to the full value it has been billed, Fontaine will give notice to the subcontractor. Subcontractor shall send a revised requisition reflecting the change in values within 24 hours. Requisition shall be paid based upon this revised application for pay.
9. All subcontractor requisitions shall be formatted in Fontaine Bros. standard format for

this project.

## **8. Change Orders**

1. A change in the work may be initiated in one of three ways
  - a. CM may send a request for quotation with accompanying drawings, sketches, or details.
  - b. CM may receive formal notification from subcontractor via an RFI requesting CM and A/E review
  - c. In response to an RFI response or other project document that the subcontractor feels constitutes extra work, subcontractor may submit a request for a change order to CM.
2. In the event that Fontaine issues a request for quotation or subcontractor feels that an RFI response or field condition will require extra work, subcontractor must submit to Fontaine a formal change order request within (7) days. In the event that no change order request is received within this time frame, subcontractor shall waive rights to any additional compensation.
3. Subcontractor shall submit change order requests in a format acceptable to Fontaine. Breakdown shall include, at a minimum, direct labor costs, direct material costs, direct equipment costs, labor burden costs, bond costs, and any other significant cost associated with the work. Labor rates shall be as reflected in the prevailing wage rates included in this project manual plus applicable burden, or at direct union rates as appropriate. Labor rates shall not include small tools, travel, or other non-labor related items. Subcontractors shall also include written back-up for all materials purchased in conjunction with change order work.
4. Change order requests may include a markup for overhead and profit up to 10% on the direct cost of the work.

## **9. Housekeeping**

1. ALL subcontractors shall be responsible for daily cleanup to an onsite dumpster provided by Fontaine. All costs related to this cleanup including hoisting shall be carried by these subcontractors.
2. Subcontractors employing union laborers on site shall allot a total of 10 hours of laborer time per week to be dedicated to overall project clean up at the direction of Fontaine Bros. This allotment shall be in addition to the time required to satisfy each subcontractor's requirement to perform cleanup of their work daily, and this shall be tracked on a weekly basis. Total hours dedicated to FBI directed cleanup shall be equal to the number of weeks the firm is mobilized on site and employing union laborers multiplied by 10 hours per week. If the full 10 hours is not used each week, unused time shall be carried forward to the next week and vice versa.
3. Subcontractors are responsible for daily cleanup of all waste generated by their operations, including packing material, fasteners, razor blades, pallets, dunnage, cardboard boxes, paper products and food waste from breaks and lunch, snippets of wire, sheetmetal waste, excess studs, sheetrock, sawdust etc. Packing and crating materials shall be broken down into smaller pieces before being placed in the dumpster to conserve space.
  - a. Subcontractors shall separate waste on site as much as possible, including separating metal, concrete, wood, and cardboard products for disposal into segregated dumpsters.
  - b. Subcontractors shall comply with Fontaine's waste management plan and shall ensure that waste is separated on site into segregated dumpsters to the fullest extent possible. These segregated dumpsters include dumpsters for wood, metal, concrete, drywall, and general debris.

- c. In the event that a subcontractor fails to complete daily cleanup to the satisfaction of Fontaine's field personnel, Fontaine shall issue a written notice to the subcontractor. Upon issuance of this written notice, said subcontractor shall have 24 hours to clean the area to the satisfaction of Fontaine's field personnel.
- d. In the event that said subcontractor fails to complete cleanup to the satisfaction of Fontaine's field personnel within 24 hours of written notice, Fontaine shall have the right to
  - i. Stop the subcontractor from working until cleanup is complete.
  - ii. Undertake the obligations of the subcontractor via use of other labor forces and process a backcharge to the offending subcontractor's account with no further notice to the subcontractor. Costs for cleaning will be deducted from the next requisition and will not be subject to appeal.

#### **10. Hoisting, Staging, Unloading**

- 1. Subcontractors are responsible for provision of all hoisting, staging, bracing, scaffolding, and rigging required for completion of their work. Subcontractors shall comply with applicable laws and regulations regarding construction of staging, operation of lifts, and any other applicable requirements.
- 2. Subcontractors shall provide manpower and equipment necessary to accept delivery, unload, store as directed by Fontaine, protect, provide security, distribute, install in sequence directed by Fontaine, and clean any materials, systems and equipment furnished and installed by the subcontractor. Subcontractor shall provide the same except for the furnishing of materials to a common offloading point on site for any materials furnished by others and installed under the scope of work of subcontractor. Subcontractor shall document receipt of all materials, systems and equipment on forms acceptable to Fontaine Bros.
- 3. Subcontractors shall expect to leave out three areas on each floor to allow the load-in and load-out of materials. All work in this area will be performed out of sequence and near the completion of the project. Once the load-in areas are closed, subcontractors will be responsible for finding a suitable route to and from upper floors with materials. Elevators will not be made available.
- 4. Take note of building access and make provisions to ensure that equipment and materials will fit through permanent doorways and or structure. Any work required to create openings for removal of doors/windows or walls in areas where equipment will not fit through openings shall be paid for by the contractor requiring the opening/access.

#### **11. Logistics**

- 1. Space constraints on site shall not allow for subcontractors to place storage trailers or job trailers on the site. Subcontractors shall store off site and hoist/handle materials at no extra cost. Site contractor shall construct laydown areas with stone as required at no extra cost.
  - a. Fontaine shall provide, at a minimum, guaranteed onsite parking for each subcontractor's foreman only. Costs for offsite parking/transportation to and from offsite parking shall be paid by individual subcontractors and shall be included in bids.
  - b. Subcontractors shall NOT park on Apricot Street, school parking lots, or any other surrounding street and shall not park on private property surrounding the project.
  - c. Space constraints on the site shall not allow for subcontractors to store raw

material on the project site. Off-site storage shall be allotted for and provided as part of bids until the project is ready to accept the material and subcontractors are directed by Fontaine to deliver the material to the site.

## **12. Closeout**

1. Subcontractor shall provide all closeout documentation in PDF format, no later than 30 days after completion of subcontractors work or 60 days before scheduled substantial completion, whichever is sooner. Draft warranties shall also be provided at this time for review of form if not provided during the submittal process, final dates shall be changed as appropriate. Hard copies of closeout documents shall be provided if requested.
2. Subcontractors shall maintain as-builts during construction for monthly review and provide as-builts in both electronic and hard copy format as requested.
3. Subcontractors shall create their own punchlist and complete remedial work **prior** to architect or CM creating and distributing a punchlist.
4. Punchlist work shall be complete as soon as possible after punchlist is issued, but no later than 14 days after punchlist is issued.
5. All punchlist work not completed prior to occupancy will be performed off-hours at the Sole discretion of the CM and Owner. No compensation will be provided for this work, and subcontractor may incur additional costs should CM or Owner expend labor supervising work.
6. Approximately 30 days prior to the warranty expiration period, the CM, along with the owner, will re-inspect the work to prepare a warranty repair list of items to be corrected by each subcontractor. This subcontractor shall make the repairs and/or replacements listed within 14 days of the issuance of this warranty repair list. Failure to do so will result in this work being performed by others at this subcontractor's expense.
7. At the completion of the project and as a prerequisite to release of retainage, subcontractor shall submit a letter of compliance. This compliance letter shall state that all work has been completed in accordance with the contract documents, that the installation has been performed in accordance with all applicable codes, and that all fire resistance characteristics, as required by the Fire Department, have been met. This letter must be signed by an officer of the company.
8. All subcontractors shall supply to the CM a complete list of attic stock for the work of their subcontract. Lists shall be aggregated and coordinated by the CM and subcontractors shall comply with specified process for delivery, receipt, and storage of material. All attic stock must be from the same production run as the materials applied on the project.
9. All subcontractors shall cooperate fully with commissioning agent and perform tasks required of their scope of work as directed by Fontaine, the Cx, and other project team members.

## **13. Trade Specific Scopes of Work**

### **A. Abatement & Demolition**

1. Abatement/demolition contractor shall be responsible for all work required to complete scope including obtaining permits and approvals, exposing hazardous materials, and removing/disposing of materials in compliance with all applicable guidelines.
2. Subcontractor shall provide as part of their bid all temporary utilities and protection required to complete their work.

3. Subcontractor shall coordinate with other trades as necessary and shall make all efforts necessary to be prudent in demolition of existing building.

**B. Enabling**

1. Enabling Contractor shall prepare and submit a SWPPP plan within (10) days of notice of intent. Enabling contractor shall file or update all necessary notifications in a timely fashion to assure that work is able to start no later than June 18, 2018. In addition to SWPPP Plan specific to sitework activities, enabling contractor shall coordinate with SWPPP preparer to provide, at no additional cost to Fontaine Bros., a SWPPP for general construction activities. This SWPPP is in addition to the SWPPP provided solely for the enabling contractor and shall be prepared in conjunction with Fontaine and paid for by the enabling contractor.
2. Enabling contractor shall construct and maintain entrances as shown on contract documents and laydown areas as shown on Fontaine logistics plans for phase 1.
3. Enabling contractor shall clean Apricot Street as necessary during the enabling phase to ensure that dirt from construction operations is not tracked onto adjacent roads.
4. Enabling contractor shall notify and coordinate with DigSafe, Worcester DPW, MA-DOT and all other relevant utility companies and regulatory agencies to identify and avoid existing utilities when performing this work. Expose utilities adjacent to work by hand before proceeding with any excavation.
5. Enabling contractor shall be responsible for snow removal for vehicle and pedestrian access and egress, parking areas, staging areas, and other areas within the construction site as directed by Fontaine during enabling construction period. This includes removal via machinery as well as hand shoveling at walks, entrances, trailers, offices, and other areas as directed by CM.
6. Enabling contractor to include dewatering, shoring, sheeting, dust control as necessary. Enabling contractor shall provide source of temporary power and fuel for temporary power for their equipment when temporary power is not available.
7. Enabling contractor shall provide police details as necessary to ensure that traffic flow to and from Apricot Street is not interrupted.
8. Enabling contractor shall provide and maintain site fence as indicated in specifications during enabling phase. Enabling contractor shall move/rearrange site fence as necessary to facilitate work at no additional cost. Site fence shall be maintained until work included in the enabling phase is complete and accepted by the Construction Manager. Include relocation of site fence prior to the start of the 2018 school year as necessary to meeting phasing requirements. Include rental of the fence through July 1, 2021.
9. Enabling contractor shall furnish, install erosion control barriers. Maintain erosion control barriers through December 1, 2018. Erosion control barriers shown on the drawings are diagrammatic in nature and may not constitute all erosion control required to comply with regulatory guidelines. Enabling contractor shall provide all necessary erosion control as part of this contract at no additional cost.
10. Enabling contractor shall investigate site prior to submitting a bid to familiarize themselves with current conditions and to provide a complete and accurate bid. Enabling contractor shall verify extent of work required such as tree clearing, removal of site components, etc. and shall include in their bid price all labor and material necessary to complete these items of work as necessary to complete the project at no additional cost.
11. Protect inlets as shown, both inside and outside of limit of work lines shown on drawings.
12. Enabling contractor shall comply with all relevant regulations in regard to blasting. No dynamite shall be stored on site. Enabling contractor shall be responsible for conducting pre-blast survey.
13. Enabling contractor shall comply with the Order of Conditions issued by the City of

Worcester and shall report on and document compliance through completion.

14. Enabling contractor shall provide manpower, equipment, and materials necessary to respond to weather events prior to and while they are occurring. Enabling contractor shall not abandon site until authorized to do so by CM.
15. At limits of work adjacent to streets/sidewalks, provide 2 layers of erosion and sedimentation control or more as required to ensure that there is absolutely no runoff from the construction site to roadways, sidewalks etc.
16. Comply with MA-DOT Vehicular and Non-Vehicular access permit requirements.

**C. Sitework**

1. Sitework contractor shall prepare and submit a SWPPP plan within (10) days of notice of intent. Sitework contractor shall file or update all necessary notifications in a timely fashion to assure that work is able to start no later than November 1, 2018. In addition to SWPPP Plan specific to sitework activities, sitework contractor shall coordinate with SWPPP preparer to modify, maintain, and/or resubmit, at no additional cost to Fontaine Bros., a SWPPP for general construction activities. This SWPPP is in addition to the SWPPP provided solely for the site contractor and shall be prepared in conjunction with Fontaine and paid for by the site contractor.
2. Site contractor shall maintain existing entrances from the enabling phase. Sitework contractor shall construct and maintain all additional entrances as shown on contract documents and laydown areas as shown on Fontaine logistics plan. In addition to areas shown on plan, site contractor shall construct additional laydown/staging areas as directed by Fontaine Bros. during the course of construction activities at no additional cost.
3. Sitework contractor shall clean Apricot Street as necessary during construction period to ensure that dirt from construction operations is not tracked onto adjacent roads.
4. Sitework contractor shall notify and coordinate with DigSafe, Worcester DPW, MA-DOT and all other relevant utility companies and regulatory agencies to identify and avoid existing utilities when performing this work. Expose utilities adjacent to work by hand before proceeding with any excavation.
5. Sitework contractor shall be responsible for snow removal for vehicle and pedestrian access and egress, parking areas, staging areas, and other areas within the construction fence as directed by Fontaine during entire construction period. This includes removal via machinery as well as hand shoveling at walks, entrances, trailers, offices, and other areas as directed by CM.
6. Sitework contractor shall pave areas as they become available and at the direction of Fontaine Bros in order to provide a clean, safe work area. Sitework contractor shall not charge for additional mobilizations.
7. Sitework contractor shall excavate and backfill trenches for buried mechanical, plumbing, gas, fire protection and electrical utilities and pits for buried utility structures, inside and outside the building.
8. Sitework contractor to include dewatering, shoring, sheeting, dust control as necessary. Sitework contractor shall provide source of temporary power and fuel for temporary power for their equipment when temporary power is not available.
9. Sitework contractor shall provide police details as necessary to ensure that traffic flow to and from Apricot Street is not interrupted.
10. Sitework contractor shall maintain site fence as indicated in specifications and on phasing drawings. Sitework contractor shall accept the condition of the site fence and move/rearrange site fence as necessary to facilitate work at no additional cost. Site fence shall be maintained until such time that fence can be safely removed as directed by Fontaine Bros. Sitework contractor shall have fence removed at that time.

SUPPLEMENTARY INSTRUCTIONS TO BIDDERS

11. Sitework contractor shall inspect and accept condition of erosion control barriers installed under the Site Enabling Bid Package prior to submitting a bid. Site Contractor shall furnish, install, and maintain erosion control barriers throughout the project. Erosion control barriers shown on the drawings are diagrammatic in nature and may not constitute all erosion control required to comply with regulatory guidelines. Sitework contractor shall provide all necessary erosion control as part of this contract at no additional cost.
12. Sitework contractor shall investigate site prior to submitting a bid to familiarize themselves with current conditions and to provide a complete and accurate bid. Sitework contractor shall verify extent of work required such as tree clearing, removal of site components, etc. and shall include in their bid price all labor and material necessary to complete these items of work as necessary to complete the project at no additional cost.
13. Protect inlets as shown, both inside and outside of limit of work lines shown on drawings.
14. Fontaine Bros. shall coordinate and direct work related to roadway construction inside and outside of the project limits. Work on roadways shall be completed so as to not disturb ongoing operations within the City and may have to be completed in a separate mobilization and/or off hours. Costs to complete this work as it is possible, and without disrupting traffic to the greatest extent possible, shall be included in this subcontractor's proposal. All traffic details and police costs shall be borne by this subcontractor.
15. Sitework contractor understands that this project is being procured in phases and that underground piping to be completed by this subcontractor and other trades, including mechanical and electrical, may need to be completed out of sequence as the procurement process allows. Sitework contractor shall carry costs as necessary to complete this work when possible and shall do so using small equipment if the schedule dictates that such equipment may be necessary.
16. Sitework contractor to provide E&B, filter fabric, compacted gravel, etc for concrete sidewalks, precast school sign, benches, stone dust and other site amenities.
17. Sitework contractor shall comply with all relevant regulations in regard to blasting. No dynamite shall be stored on site. Sitework contractor shall be responsible for conducting pre-blast survey.
18. Sitework contractor shall comply with the Order of Conditions issued by the City of Worcester and shall report on and document compliance through completion.
19. Sitework contractor shall provide manpower, equipment, and materials necessary to respond to weather events prior to and while they are occurring. Site contractor shall not abandon site until authorized to do so by CM.
20. At limits of work adjacent to streets/sidewalks, provide 2 layers of erosion and sedimentation control or more as required to ensure that there is absolutely no runoff from the construction site to roadways, sidewalks etc.
21. Construct temporary drainage, sedimentation and erosion controls as required to ensure that stormwater and sedimentation is controlled within site limits. No runoff to streets or sidewalks shall be acceptable. If runoff occurs, site contractor is to clean immediately and remediate at their expense.
22. Provide temporary mounding, ramps, and paving for such activities as crane picks, and to provide clean access to and from building.
23. Protect existing features to remain including trees and monuments in such fashion as to prevent damage and decay. Engage the services of an arborist to certify that protection and maintenance of trees to remain is sufficient.
24. Comply with MA-DOT Vehicular and Non-Vehicular access permit requirements.
25. Site contractor shall salvage, store, and protect existing monuments.
26. Subcontractor shall install light pole bases as part of base bid work. Subcontractor shall work in conjunction with electrical subcontractor to complete light pole bases as

work becomes available and shall make no additional claims for compensation related to delays encountered in furnishing/installing light pole bases.

**D. Concrete**

1. Concrete subcontractor shall provide temporary power as necessary for completion of their work.
2. Concrete subcontractor shall provide a cold and hot weather concrete plans for review and approval prior to beginning work. Subcontractor shall adhere to these plans and provide labor, materials, equipment, and fuel for compliance with cold and hot weather concrete plans.
3. Concrete subcontractor shall not add water on site unless water has been specifically held back at batching plant. Subcontractor shall not add more water to mix than called for in the mix design.
4. Provide all survey and layout required to complete this scope of work from control points established by others.
5. Provide a field verification as-built survey of all footings, foundations, slab edges, embeds, columns, slab elevations, shafts, floor openings, anchor bolts, etc. at the completion of each placement sequence.
6. Provide all slab depressions, pockets, slopes, box outs, etc. Refer to architectural structural, and MEP drawings. Where conflicts occur, the more expensive detail applies, unless directed otherwise by Fontaine Bros.
7. Provide grouting for base plates, leveling plates, and elevator sill pocket assemblies, and include box outs for these items as required. Provide concrete infill after installation.
8. Contractor to clean all debris off metal decking, regardless of who created them, prior to placing concrete slab on deck. Contractor is responsible for removal of rain water from decking prior to pour.
9. Provide concrete in fill for all steel stair pans and associated landings. Assume this will require separate mobilizations. Provide, maintain, and remove temporary wood fillers in treads once the stair framing is complete. Clean out all pans and landings prior to concrete placement. Seal seams prior to placement and/or clean any drips after placement. Clean concrete from steel at all stair risers, stringers, and the underside of stairs and landings no later than 24 hours after concrete placement. Request review with the Construction Manager upon completion of this activity.
10. Contractor shall clean up and dispose of all concrete drippings from overhead pours.
11. Contractor shall designate and maintain a washout area in accordance with environmental regulations. Coordinate washout location with Construction Manager. Remove and dispose of debris resulting from washing out of concrete trucks.
12. Coordinate with Fontaine, OPM, and Testing Agency during all concrete work. Provide multiple curing boxes for test cylinders. Control temperature as necessary. Ensure field cylinders are cured per ACI requirements.
13. Furnish, erect, maintain, and dismantle any staging required in the course of subcontractor's work.
14. Provide daily cleanup to dumpster provided by CM.
15. Monitor materials testing reports (furnished by others) and verify that the concrete has reached 75% of its design strength.
16. Identify any modifications to the anchor bolts that have been submitted and approved by the structural engineer of record for the project. This letter of verification shall be provided to the Construction Manager on week prior to the commencement of steel erection. This contractor shall be responsible for any repairs due to misalignment.
17. Perform anchor bolt survey prior to steel erection.
18. Subcontractor shall be responsible for the flatness & levelness of finished slabs at time of finish floor application. Provide additional concrete and/or shoring as required

to meet the slab flatness/levelness tolerance due to deflection. FF/FL tests performed per specifications do not relieve subcontractor of responsibility for flatness of slabs at time of finish floor application. Leveling, patching, grinding and flashing required to bring floors to within flooring manufacturers' required flatness tolerance shall be performed by this subcontractor as part of the work of this contract. This includes remediation of floors due to curling and settling that occurs after FF/FL testing and prior to finish floor application. This also includes work necessary to patch/grind/level at construction joints, control joints, box outs, and other discontinuous slab conditions. All work required to meet manufacturers' required tolerances shall be performed as part of this subcontract and shall be included in subcontractor's bid price.

19. Subcontractor understands that foundations may be complete prior to mechanical coordination being complete in the building due to the early release of the concrete package. Subcontractor shall make box outs as necessary and furnish/install sleeving to allow for mechanical penetration when possible at no additional cost.
20. Subcontractor understands that underslab mechanical work cannot be guaranteed to be complete prior to steel erection and that slab work shall be performed at the convenience/discretion of Fontaine. CIP concrete subcontractor shall make no claims for additional monies as a result of sequence of underslab mechanical work/steel erection/slab placement and shall pour slabs as areas become available. Subcontractor understands that slabs may be placed in more mobilizations than is ideal for productivity in order to accelerate schedule. Subcontractor shall carry all costs for pumping and working within erected steel structure as part of base bid.
21. Provide all housekeeping pads indicated on the contract documents. Refer to MEP drawings as well as all other drawings and specifications for pad locations/requirements. Submit shop drawings for approval of pad size and location.
22. Provide all dowels and rebar required from concrete to masonry. Coordinate spacing and locations with the Masonry Contractor.
23. Provide temporary guardrails and toe boards as required by OSHA at all cast-in-place concrete walls where the top of the wall is more than four feet above grade. Remove and replace as required to complete your work. Maintain rails for the duration of concrete work.
24. Provide concrete pad for a building exterior wall mockup in a location determined by the Construction Manager.

#### **E. Masonry**

1. Furnish, erect, maintain, dismantle and remove scaffolding/lifts necessary to complete this scope of work in compliance with all OSHA requirements.
2. Provide all layout to complete this scope of work.
3. Patch and point any areas affected by anchorage of staging to building.
4. Temporary tarping, enclosure, and weather protection required to complete this scope of work shall be constructed, maintained, dismantled and removed by masonry contractor. Provide temporary heat and fuel within contained area.
5. Heating of sand, mortar, or similar shall be the responsibility of the masonry subcontractor.
6. Assemble and maintain an approved washout area.
7. Mason shall grout all HM frames, sidelights, borrowed lights etc. provided and set by others.
8. Install all loose lintels furnished by misc. metal contractor.
9. Install all inserts, sleeves, rails, anchors, hoist beams, etc. as provided by misc. metal contractor and elevator subcontractor.
10. Furnish and install through wall flashing systems installed in masonry.
11. Furnish and install all acoustical sealant and firestopping systems at the top and

bottom of exterior and interior walls as indicated and required to achieve STC and/or fire rating.

12. Provide access to staging for work of other trades.
13. Mason shall provide complete washdown of installed work. Protect windows and precast by wrapping in poly. Take special care to protect precast from acid and avoid etching/damage to precast finish.
14. Provide boxouts for all items to be installed in masonry walls including, but not limited to, MEPFP items, miscellaneous metals/steel, rough-in boxes, piping, ductwork, door hardware, specialties items, etc. Patch all boxouts following work of other trades.
15. Provide special shapes where noted on the drawings. Do not field cut shapes unless directed by the Construction Manager.
16. Provide grout at structural steel beam pockets. Include grouting of base plates at these locations.
17. Include the cost of all labor and materials to assist the testing agency in performing the required masonry testing.

#### **F. Structural Steel, Metal Decking**

1. Provide an OSHA approved two-line safety cable system at all deck penetrations and along the perimeter of the building in all locations where fall protection is required. Maintain this system. Provide additional turnbuckles at locations required by the Construction Manager to allow access for material loading on floors by other contractors. At openings, provide stanchions and anchoring that will allow perimeter work by others to be installed with the cabling system remaining in place. At roof level, provide temporary perimeter stanchions with sufficient height and additional penetrations to allow for cable height adjustment. This trade contractor is responsible for adjusting perimeter cable height to meet OSHA requirements before, during, and after roofing installation.
2. Provide preparation and steel primer in accordance with the specifications and compatible with finish coatings. Coordinate steel not to be painted as specified. Field touch up, by this subcontractor, is included in this scope of work.
3. Provide temporary power including fuel for all equipment necessary to complete this scope of work.
4. Provide all required shop testing and inspections. Field testing is by owner. Accommodate onsite testing of your work by the Owner's testing agency. This contractor shall be responsible for any costs associated with re-inspection or re-testing required due to this contractor's non-compliance.
5. Provide framed openings in steel and metal deck to accommodate mechanical, electrical, plumbing, and fire protection penetrations. Provide reinforcement of steel where necessary. Provide closure plate at metal deck where necessary. Protect all openings made by this bid package. Openings for ductwork, curbs, hatches, etc. are to be decked over until such time that the curbs, hatches, etc. are ready to be set. Include comeback operations to cut deck accordingly.
6. Provide all hoisting, staging, rigging, cranes required for this scope of work in compliance with all applicable OSHA regulations.
7. Comply with 6' tie off for all workers.
8. Provide PPE for all workers including, but not limited to, hard hats, glasses, harnesses, and vests.
9. Provide all temporary shoring and bracing as required. Remove temp bracing upon completion of shear walls, brace frames, and moment frames. Remobilize as required to complete this work.
10. Fireproofing.

#### **G. Miscellaneous Metal**

1. Provide all miscellaneous metal not integral to structural steel.
2. Provide and maintain temporary stair towers at (2) stair openings as directed by Fontaine Bros. from the time that access is necessary until all permanent stairs are installed. Temporary stair towers to comply with OSHA guidelines.
3. Provide all staging, hoisting, rigging, lifts necessary to complete work of this subcontractor.
4. Provide temporary power including fuel for all equipment necessary to complete this scope of work.
5. Cost for any fire watches required to complete work will be the responsibility of misc. metal fabrications subcontractor.
6. Coordinate with CM and subcontractors to complete scope of work related to items including, but not limited to, the following:
  - a. Pipe bollards
  - b. Barrier gates
  - c. Exterior scoreboard supports
  - d. Exterior handrails
  - e. Exterior guard rails
  - f. All lintels, anchor bolts, nuts, sleeves, required for masonry or other subcontractors.
  - g. Embeds for elevator
  - h. Ladders
  - i. Stairs
  - j. Roof Equipment Screens and supports.
  - k. Trench Drain frames and covers
  - l. Catwalks and stairs
  - m. Misc Supports
  - n. Downspout boots
  - o. Bleacher supports
  - p. Scoreboard supports
  - q. Unistrut Supports
7. Provide all required certificates and qualifications required per spec prior to starting any fabrication or installation.
8. Misc metal subcontractor shall acquire necessary welding permits, shall coordinate and pay for required fire watches, and shall furnish install maintain and remove all required fire blankets.
9. Provide all exterior guardrails, handrails, ramp rails, and similar rails at other locations as required in the contract documents. Refer to architectural, civil, and landscape drawings for requirement. Provide a complete installation including sleeving, coring, grouting, etc.
10. Provide all bolted, slotted, hung, welded or otherwise adjustable support angles including but not limited to brick relieving angles. This contractor shall come back and align the hung lintels/relieving angles and complete welding during the erection of the masonry veneer. After the adjustment is complete, this contractor shall weld the item in place. Include remobilization to perform this work.
11. Protect all surrounding work. Removal of welding splatter, metal cuttings, shavings, and other debris from adjacent surfaces is the responsibility of this contractor.
12. Field measure for all items to be installed on or between existing surfaces prior to fabrication.
13. Furnish embedded items associated with this scope of work to the concrete and masonry contractors in sufficient time to allow casting in place. This contractor shall be responsible for the cost of remedial/corrective work required due to the late delivery of embedded items.
14. Provide hoist beams for the elevator shafts. Coordinate location with elevator

contractor and masonry contractor to provide required clearance to facilitate elevator installation.

#### **H. Rough Carpentry**

1. Include all new wood blocking at windows as shown/specified. Include fire retardant wood at all locations.
2. Furnishing and installing of the in-wall blocking shall be the responsibility of the drywall contractor. Coordinate all blocking with other trades.
3. Furnish and install all roof blocking including dimensional lumber, plywood etc. at exterior roof edge, parapet walls, mechanical curbs, roof drains, roof accessories and any other place that blocking appears as part of drywall package.

#### **I. Finish Carpentry, Architectural Woodwork, Solid Surfacing Fabrications**

1. Millwork subcontractor shall provide shop drawings within 6 weeks after subcontract. Millwork subcontractor shall update and field verify dimensions as framing is completed, and shall produce millwork as soon as reasonably possible.
2. It is understood that millwork subcontractor shall store millwork off site at the direction of Fontaine Bros. until building is ready to accept installation of millwork. Millwork subcontractor shall include cost of offsite storage, in a climate-controlled space, until acceptance of millwork by Fontaine.
3. Millwork shop shall not be required to maintain AWI Certification in order to provide millwork, however Fontaine reserves the right to reject any millwork that does not represent a high-quality product.
4. Millwork shall be delivered in such a sequence as to facilitate a continuous installation, either in sequence from room to room or area by area. Millwork shop shall meet with Fontaine Bros. and millwork installer (finish carpentry subcontractor) to determine sequence and shall produce millwork in desired sequence at no extra cost.
5. Millwork subcontractor shall provide any steel supports integral to the millwork.
6. Provisions shall be made within millwork for all required electrical and data outlets. Allow access for electrical contractor to perform rough in on-site.
7. Finish carpentry subcontractor responsible for receiving, inventorying, unloading, distributing, protecting, and installing all millwork and finish carpentry materials not specifically included within casework scope of work.
8. Finish carpentry subcontractor is responsible for all layout necessary for installation.
9. Finish carpentry subcontractor responsible for receiving, inventorying along with supplier, unloading, distributing, protecting, and installing all hollow metal and wood doors, and finish hardware (except that provided by aluminum entrances trade contractor).
10. Wood blocking located within wall assemblies will be provided by the drywall contractor. All other blocking and blocking exterior to wall assemblies and required for the work of this bid package shall be provided by this contractor. If in wall blocking is required and not shown, provide detailed shop drawings identifying locations and type of blocking needed. Failure to identify needed in wall blocking and or late submittal of blocking information shall result in this bid package providing the needed blocking and associated wall repair.
11. Finish carpentry subcontractor shall provide and maintain temporary carboard protection of all finished surfaces in a manner that keeps the protection in place until final cleaning.

#### **J. Waterproofing, Dampproofing and Caulking**

---

**SUPPLEMENTARY INSTRUCTIONS TO BIDDERS**

1. Provide all lifts, staging, hoisting, rigging, etc. required to complete this scope of work.
2. Work in sequence with other trades and complete work as areas become available. Subcontractor understands that multiple mobilizations will be necessary to complete envelope as work is completed and that areas such as loading docks may be completed later than others.
3. Subcontractor shall provide labor, material, equipment etc. necessary to complete all work related to mock ups and as required to complete building envelope and window testing. Subcontractor shall complete remedial work required in the event that any testing fails at no additional cost.
4. Provide all tie offs, harnesses, and safety requirements necessary to complete this scope of work.
5. Subcontractor shall complete punch list work within 2 weeks of a punch list being issued for each area of work. In the event that multiple punch lists are issued at different times for different areas of the building, subcontractor shall remobilize to complete punch lists as they become available.
6. Assist Commissioning Agent with all activities related to building envelope commissioning including completion of installation checklists, providing photographs of work in process, providing access for inspections, etc.
7. Once masonry is complete, provide a temporary barrier at the top of all cavity walls.

**K. Cement Fiber and Metal Wall Panels**

1. Provide all lifts, staging, hoisting, rigging, etc. required to complete this scope of work.
2. Provide all layout required for this work. Coordinate location of all panel joints with openings and wall mounted items to allow for required panel sizes and edge distances.
3. Furnish and install system from outside of vapor barrier to finish, including rigid insulation, metal framing, and panels.
4. Work in sequence with other trades and complete work as areas become available.
5. Provide all tie offs, harnesses, and safety requirements necessary to complete this scope of work.
6. Provide off site storage for panels until they are required on site.
7. Provide all metal closures associated with the work of this bid package and between this bid package and adjacent construction.
8. Work will require several mobilizations.

**L. Roofing and Flashing**

1. Comply with 6' tie off for all workers. In addition, install and maintain a fall protection system such as a flagging system per OSHA guidelines. Provide a minimum of 300 feet of Garlock temporary railing or equivalent located at the discretion of the construction manager. Return to the site at the request of the construction manager to remove Garlock when all trades have completed their work.
2. Install, maintain, and relocate as necessary (3) loading/receiving areas comprised of ballasted guardrails or comparable system at roof edge to be utilized by trades.
3. Furnish and install flat and tapered roofing insulation
4. Furnish and install complete roofing system including all components.
5. Furnish and install flashing, roof edge coping, parapet covers, sheet metal including gutters, downspouts, snow guards, aluminum flashing, cap flashing systems complete.
6. Remove snow and ice as necessary to continue and complete work without delay due to weather.
7. Furnish and install all roof specialties.

---

**SUPPLEMENTARY INSTRUCTIONS TO BIDDERS**

8. Furnish and install prefabricated roof scuttles and elevator penthouse and louvers.
9. Install and flash mechanical equipment curbing provided by MEPFP and Kitchen contractors.
10. Furnish and install roof expansion joints.
11. The roofing subcontractor shall be responsible for their own fall protection system complying with OSHA standards and 6' fall rule.
12. Store roof material so as to protect roofing from damage and also from restricting access or egress.
13. Provide all lifts, hoisting, rigging, etc. required to complete this scope of work, except for setting of mechanical curbs via crane from truck on site.
14. Roofer must maintain a clean and safe work environment; daily cleanup of trash from roof to a dumpster provided by Fontaine is required. If roofer fails to maintain a clean and safe work environment, Fontaine reserves the right to stop work until cleanup is completed, complete work against subcontractor's account, or hold payments to subcontractor.
15. Clean roof decks prior to installation of this work. Rough cleaning and removal of materials will be provided by trade working on the deck prior to your work.
16. Roofing subcontractor shall coordinate with all trades requiring roof penetrations and provide all material and labor required to seal any penetrations required by those trades.
17. Roofing subcontractor shall include provisions within base bid to install temporary roofing at areas that roof top curbs and equipment have not been installed and shall not delay the overall scope of making the building weather tight contingent upon roof top information. It is anticipated that separate mobilizations for the installation of roof top curbs and equipment may be needed and that roofing subcontractor shall include provisions for this work.
18. Roofer shall provide provisions to temporarily secure the edge of the roof membrane until roof edge metal is installed.
19. Roofer shall take appropriate measures to protect roof during installation of System and after installation of system is complete including ensuring that foot traffic protection is provide in lieu of roof mats prior to installation of permanent roof mats.
20. Roofer shall provide and maintain fall protection system throughout the course of the project.
21. Roofer shall patch holes in roof created by installation of tie downs by other trades.
22. Assist Commissioning Agent with all activities related to building envelope commissioning including completion of installation checklists, providing photographs of work in process, providing access for inspections, etc.
23. Provide testing and inspection required by the specification. Provide inspections as required by the roofing manufacturer to achieve roof warranty.

**M. Firestopping**

1. All subcontractors shall complete firestopping and firesafing necessary to seal penetrations required within their scope of work. Subcontractors shall provide removable temporary firestopping and firesafing prior to final firestopping and firesafing.
2. There shall be one brand of firestop material for all firestopping work. The actual brand chosen shall be based upon a consensus of agreement between the successful bidders. The contractors will be required to provide fire stop systems as it applies to the individual scopes. The contractors shall also include fire stop/safe labeling and tagging each penetration or application with data including but not limited to installer, contractor, location, system used, and date. Also, the contractors shall provide data log entries for use in generating an as-built plan including location.

**N. Hollow Metal Doors and Frames, Wood Doors, Finish Hardware**

1. Provide submittals for scope of work within 2 weeks of subcontract award.
2. Wood doors to be UF Free.
3. Wood doors to include all stops for glazing. Include allowance to replace 5% of glazing stops and fasteners at no additional charge.
4. All HM frames shall be welded.
5. HM Doors, Frames, Wood Doors, Finish Hardware, shall be purchased furnish only in one complete package. Supplier shall be responsible for coordinating with installing contractors.
6. All hollow metal frames, steel, and wood doors shall be permanently marked with the door number location designation from the contract drawings. Apply markings in a non-visible, consistent location on all doors. Markings are to be applied to the bottom edge and hinge location on all frames.
7. HM frames within masonry shall be set by drywall subcontractor and grouted in by masonry subcontractor. HM frames within drywall partitions shall be installed by drywall subcontractor.
8. Wood and hollow metal doors shall be installed by finish carpentry subcontractor.
9. Finish hardware shall be installed by finish carpentry subcontractor. Finish hardware in Aluminum doors shall be install by the aluminum curtainwall/storefront contractor.
10. Installing subcontractors shall be responsible for labor associated with unloading and distributing doors, frames, hardware.
11. Prepare all doors and frames including pre-drilling, pre-cutting, raceways and reinforcing as required to receive all hardware including any electrical and or security equipment schedule.
12. Coordinate hardware schedule with architectural, electrical, and security drawings. Note any discrepancies prior to completion of submittals.
13. Hardware set and door opening numbers shall be marked on each individual box and on delivery slips. Provide hardware in original containers within individual hardware set boxes whenever possible. All hardware shall be prepared for proper door swing and handing. Hardware for aluminum doors shall be coordinated with and supplied to the installing contractor.
14. Supplier responsible for providing doors, frames, hardware shall be responsible for having a qualified representative on site to participate in inventorying doors, frames, and hardware as they arrive. Installing subcontractors shall take possession of materials and shall sign off on materials as they are delivered.
15. Review schedule and coordinate all deliveries with the Construction Manager. Plan on phased deliveries by floor and/or area as directed by the CM. Masonry frames will be released early and ahead of other areas.
16. Cleanly cut, remove and dispose of spreader at HM frames at direction of Fontaine Bros. Frames damaged during removal of spreader shall be replaced at no added cost by subcontractor responsible for damaging frames.
17. Provide fully tagged and labeled key cabinet set up for turnover to the owner. Provide a minimum of one full day of owner orientation training to the keying system.

**O. Metal Windows, Aluminum-Framed Storefronts, Glazed Aluminum Curtain Walls, Aluminum Windows, Glazing**

1. Provide all lifts, hoisting, staging, rigging, etc. required to complete this scope of work.
2. Subcontractor to furnish and install any and all hardware to be installed within this scope of work.
3. Subcontractor to furnish and install all flashing, panning, sealants, minimally expanding foam, and exterior sealants required for complete weather tight installation

of systems.

4. Include provisions for testing of windows in place and in mock up as indicated in specifications.
5. Work in harmony with other trades responsible for wiring doors for security, providing light fixtures within systems, and all other work that requires coordination between trades.
6. Provide final cleaning of the exterior of all systems installed by this subcontractor at the completion of the project when directed by Fontaine Bros.
7. The requirements shall apply to all subcontractors performing work of these sections, regardless of how they are procured.

**P. Access Doors & Panels**

1. Access doors and panels shall be provided by subcontractor whose work requires them for access. Location of all access doors and panels shall be noted in the coordination drawings and submitted for approval by the design team.
2. Access doors and panels shall be installed by subcontractor whose finish work the panels rest in i.e. drywall subcontractor in gypsum board partitions and gyp board ceilings, mason within CMU walls, and ceiling contractor within ACT Ceilings.
3. Access panel supplier is responsible for providing sizes and locations for installing subcontractor within 4 weeks of contract award. Subcontractor shall email a list of panels with size and locations to CM for distribution. Costs associated with rework of framing due to failure to provide correct size and location shall be borne by the subcontractor responsible for providing the doors and panels.

**Q. Coiling Counter Doors, OH Coiling Doors, OH Coiling Grilles**

1. Subcontractor shall provide shop drawings, in electronic format, via Procore.
2. Subcontractor shall provide all lifts, staging, hoists, rigging, unloading, and distribution for this section.
3. Subcontractor shall work in harmony with other trades providing components of complete system. Subcontractor shall provide shop drawings within 4 weeks of subcontract to allow for coordination with subcontractor providing blocking, electrician providing power and wiring, etc.
4. Electrical subcontractor shall furnish and install all low voltage wiring for complete operation.
5. Provide access doors and panels as necessary to service motorized components. Coordinate location with the drywall and/or masonry contractor.

**R. Drywall**

1. Furnish/Install all wood blocking within the building as required for the project including but not limited to the items listed in the specifications. This blocking includes in wall blocking, window blocking, plywood backup for mounting and associated blocking, and other blocking as necessary.
2. Comply with all **LEED** requirements including protection of absorptive materials; provide date stamped photos documenting compliance with these requirements.
3. Furnish and install ALL sheathing at exterior walls, including parapet sheathing.
4. Furnish and install ALL gypsum board assemblies, complete.
5. Subcontractor responsible for furnishing, delivering, unloading, dispersing, protecting, and installing all components of system within scope of work.
6. Subcontractor responsible for hoists, lifts, rigging, etc. required to complete scope of work.
7. Drywall subcontractor responsible for unloading, distributing, and installing HM

- frames within metal stud partitions. Install per manufacturer's instructions.
8. Patch holes in partitions created or left open for temp systems including electric, water, propane, etc.
  9. Drywall subcontractor responsible for unloading, distributing, and setting HM frames within masonry wall. Masonry subcontractor responsible for final installation/grouting of frames. Provide Styrofoam within jambs as necessary to allow for mounting of hardware on door frames.
  10. Remove and replace perimeter protection cable system as necessary to access your work. Provide additional protection as required by OSHA and the project safety plan during your operations.
  11. Upon completion of steel erection, maintain perimeter safety cable until cable is no longer needed. At that time, in coordination with the Construction Manager, this contractor shall remove and dispose of the safety cable stanchions and cables. Concrete shall be chipped as necessary by this contractor to allow stanchions to be cut below the level of the finished floor.
  12. Provide all field engineering for layout from control points provided by the construction manager. This contractor shall permanently mark all floors with wall locations and all door openings within the walls prior to erection of walls to allow layout and rough in by other trades. Permanent markings shall be confined to areas that will be covered by the wall construction. No markings may extend into areas where the floor finish is sealed concrete.
  13. Drywall subcontractor is responsible for all acoustical sealant to meet STC ratings. Provide acoustical sealing of all penetrations through gypsum walls as required to meet detailed STC ratings.
  14. Provide all firestopping and fire safing assemblies for this bid package at all walls noted as fire rated. Provide all head of wall firestopping, where required, at interior gypsum wall assemblies. Fire stopping within MEPFP sleeves/penetrations are by the trade whose work passes through the sleeve. Inspect and label all partitions with the appropriate UL label. Advise the construction manager of discrepancies found that would impact the rating of the system.

#### **S. Louvers & Vents**

1. Furnish and install work included in this section.
2. Subcontractors shall provide all lifts, staging, hoists, rigging, unloading, distribution for their work within this section.
3. Electrical subcontractor shall coordinate with louver supplier/installer to provide all necessary wiring and connections. Controls subcontractor shall furnish/install any required controls for mechanically operated louvers and vents.

#### **T. Tile, Ceramic Tiling, Quarry Tiling**

1. Provide shop drawings in electronic format via Procore. Clearly indicate areas where slab needs to be depressed and required slab depression.
2. Level, patch, clean, detail, or otherwise prepare substrate as necessary to ensure proper adhesion and finish prior to commencing installation. Fill and prepare slab shrinkage cracks and joints for floor finishes.
3. Subcontractor responsible for ensuring a smooth and level transition between various flooring types through flash-patching, reducers, transition strips, and/or any other means necessary.
4. Provide offsite storage for materials as necessary and directed by Fontaine Bros.
5. Coordinate with other subcontractors to ensure a neat and flush interface.
6. Adhere to temporary protection and cleaning instructions per specifications.
7. Protect and maintain protection of all finished work.
8. Inspect substrate of floors and wall as soon as they become available and with

sufficient time to allow for repair without impacting project schedule. Notify the CM of any discrepancies.

9. Work will be performed out of sequence. Multiple mobilizations will be required.

#### **U. Acoustical Ceilings**

1. Subcontractor shall include provisions to install ceiling grid system prior to installation of tile. Subcontractor shall carry multiple mobilizations to complete cuts, device installation, and full tiles.
2. Subcontractor shall provide multiple crews if necessary to complete installation of grid and tiles in an expedient manner. Subcontractor understands that sequence of work for acoustical ceilings will not necessarily be contiguous and that compliance with project schedule will require multiple mobilizations and may require overtime.
3. Ceiling grid shall be seismically braced as indicated or required to meet or exceed specifications and code.
4. Subcontractor to frame to and provide cutouts in the ceiling for other trades including lighting fixtures, mechanical equipment, projection screens, access panels, expansion joints, and more.
5. Provide touch up paint at cut ceiling tile edges exposed to view.
6. Subcontractor to include an allowance of 80 hours of punch list work completed for areas not damaged by ACT contractor including replacement of tiles around devices, cuts, etc. Subcontractor shall carry, in addition to labor, 40 boxes of various types of ACT to be used in completion of punch list for work NOT damaged by ACT subcontractor.
7. As a result of the coordination process, reflected ceiling plans may vary from original contract documents (light fixtures, diffusers, etc.). Attend and participate in the overhead coordination meetings. Participation in these meetings includes sign off on MEP coordination drawings. Adjustments to the ceiling assemblies to address layout of overhead equipment will be at no additional cost to the project.

#### **V. Wood Strip and Plank Flooring, Wood Athletic Flooring**

1. Subcontractor shall level, patch, clean, detail or otherwise prepare substrate to achieve proper flatness and levelness required by flooring manufacturer prior to commencing installation.
2. Provide and maintain ventilation as required to complete your work.
3. Provide gym floor line striping plan with submittals. Mobilize early to layout all sleeves as soon as gym equipment is in place.

#### **W. Resilient Flooring, Resilient Base and Accessories**

1. Provide resilient base at all areas indicated on contract documents.
2. Provide resilient tile at areas indicated on contract documents and in patterns indicated in finish schedule/drawings. In the event of a conflict between drawings and finish schedule, subcontractor shall carry more expensive pattern/quantity.
3. Level, patch, clean, detail, or otherwise prepare substrate as necessary to ensure proper adhesion and finish prior to commencing installation. Inspect substrate as soon as it becomes available.
4. Subcontractor responsible for furnishing, delivering, unloading, distributing and installing flooring materials.
5. Subcontractor responsible for ensuring a smooth and level transition between various flooring types through flash-patching, reducers, transition strips, and/or any other means necessary.
6. Install and maintain temporary protection of all finished surfaces. Adhere to cleaning

instructions per specifications, damage incurred as a result of lack of protection will be the responsibility of flooring subcontractor.

**X. Rubber Flooring**

1. Level, patch, clean, detail, or otherwise prepare substrate as necessary to ensure proper adhesion and finish prior to commencing installation.
2. Subcontractor responsible for furnishing, delivering, unloading, distributing, and installing flooring materials.
3. Subcontractor responsible for ensuring a smooth and level transition between various flooring types through flash-patching, reducers, transition strips, and/or any other means necessary.
4. Install and maintain temporary protection of all finished surfaces. Adhere to cleaning instructions per specifications, damage incurred as a result of lack of protection will be the responsibility of flooring subcontractor.

**Y. Carpeting**

1. Level, patch, clean, detail, or otherwise prepare substrate as necessary to ensure proper adhesion and finish prior to commencing installation.
2. Subcontractor responsible for furnishing, delivering, unloading, distributing and installing flooring materials.
3. Subcontractor responsible for ensuring a smooth and level transition between various flooring types through flash-patching, reducers, transition strips, and/or any other means necessary.
4. Adhere to temporary protection and cleaning instructions per specifications, damage incurred as a result of lack of protection will be the responsibility of flooring subcontractor.

**Z. Tile Carpeting**

1. Level, patch, clean, detail, or otherwise prepare substrate as necessary to ensure proper adhesion and finish prior to commencing installation.
2. Subcontractor responsible for furnishing, delivering, unloading, distributing and installing flooring materials.
3. Subcontractor responsible for ensuring a smooth and level transition between various flooring types through flash-patching, reducers, transition strips, and/or any other means necessary.
4. Adhere to temporary protection and cleaning instructions per specifications, damage incurred as a result of lack of protection will be the responsibility of flooring subcontractor.

**AA. Fabric Wrapped Panels**

1. Subcontractor shall coordinate blocking with installing subcontractor. Subcontractor shall provide locations and size of blocking required. Blocking that is installed after wallboard is installed because of Fabric Wrapped Panels sub error shall be furnished and installed by Fabric Wrapped Panels subcontractor. Patching and painting as necessary shall be charged to fabric wrapped panels subcontractor.
2. Subcontractor shall provide all cutouts in panels for wall mounted devices.

**BB. Acoustical Insulation**

1. Comply with LEED requirements including protection of absorptive materials and acoustical requirements. Provide date stamped photo documentation showing absorptive materials protected.

#### **CC.Painting**

1. Furnish and apply paint for interior and exterior surfaces.
2. Inspect and accept substrate prior to painting as soon as it becomes available. Notify the CM of any areas that do not meet specifications.
3. Provide surface preparation prior to applying paint, including field primer if necessary at hollow metal door frames.
4. Seal tops and bottoms of wood doors as required.
5. Fire rated labels shall not be painted or covered.
6. Protect surfaces not scheduled to receive paint from paint, including overspray. Paint on surfaces not scheduled to receive paint shall be removed by this subcontractor, using methods that do not damage the intended finish of such surfaces, at no additional cost to the project.
7. Properly dispose of excess materials and containers. Materials and containers that cannot be disposed of in general debris dumpsters shall be disposed of by the painting subcontractor. Create and maintain an approved washout area.
8. Paint/touch up areas where holes were created by temporary systems including temp electricity, water, propane, etc.
9. Include provisions for touchup of finish painted surfaces just prior to occupancy as directed by Fontaine.
10. Paint all access panels installed by other trades.
11. Provide stencils above ceiling at all fire rated walls.

#### **DD.Markerboards**

1. Provide off site storage for markerboards until directed to install by Fontaine.
2. Assume that separate mobilizations will be required to install mounting clips and to install markerboards.
3. Subcontractor responsible for furnishing, delivering, unloading, inventorying, distributing and installing markerboards under this scope.
4. Coordinate marker board requirements with requirements of the projection system.

#### **EE. Toilet Compartments**

1. Indicate on shop drawings all locations of in-wall blocking required for installation by others.
2. Field verify all dimensions when drywall is installed and prior to ordering material.
3. Include all fasteners, joint sealants, adhesives required to complete this work.
4. Do not damage tile finishes in the process of installation. Damage caused by installing subcontractor shall be repaired at installing subcontractor's expense.

#### **FF. Metal Lockers**

1. Metal lockers subcontractor shall be responsible for furnishing, delivering, unloading, inventorying, distributing, and installing metal lockers including fasteners, sloped tops, number tags, and hardware.
2. Metal lockers subcontractor is responsible for protecting metal lockers on site prior to installation. If necessary, store metal lockers offsite until just prior to installation. No claims shall be made for damage to metal lockers occurring prior to installation.

**GG. Kitchen Equipment**

1. Kitchen equipment subcontractor shall complete all required connections, testing, and work required to furnish and install a complete and operational system unless such work is explicitly specified as by others.
2. Kitchen equipment subcontractor shall submit shop drawings through Procore. Shop drawings shall include "rough-in" drawings. Roughing-in contractors will not be responsible for interpreting catalog cuts to determine the rough-in requirements. Indicate on shop drawings all required in-wall blocking and all floor recesses for installation by others.
3. Field measure for all critical fit custom fabricated items.
4. All equipment provided shall be installed by this Contractor. Provide all assembly of internal components to make kitchen equipment complete. Final utility connections only will be provided by others as outlined in the plans and specifications.
5. Check equipment sizes and take note to building access. Make provisions to ensure that equipment will fit through permanent doorways and/or structure.
6. Be advised that the MEPFP drawings along with the food service equipment specifications and drawings will be used as a reference for rough-in of waste, water, and electrical systems. Provide equipment to fit these requirements. Notify the Construction Manager if writing of any deviations at bid time.
7. Provide protection of equipment until final acceptance. Provide touchup painting of all finishes including factory finished equipment. Provide final cleaning of all materials and equipment. Food service equipment is required to be cleaned and sanitized by this contractor when directed by the CM.
8. Warranty periods for equipment of this bid package shall not start any earlier than July 1, 2021.
9. Participate in health department review, acceptance, and sign off.

**HH. Gym Equipment**

1. Submit receive approval, and deliver equipment and material so as to maintain the project schedule as directed by the Construction Manager
2. This contractor shall provide all switches, controllers, and necessary wiring from the controller/switch to the motors for the equipment. Power to controller/switch will be provided by the electrical contractor. Coordinate work with the electrical contractor.
3. Coordinate locations of all wall devices with the architectural drawings.
4. Provide all means of support and attachments for all equipment back to the structure. Provide all miscellaneous steel supports which are not shown on the drawings but are required to complete the work of this bid package. Include primer and touch-up paint on prefinished materials.
5. Submit complete coordination drawings in conjunction with BIM coordination indicating location of equipment in relation to MEPFP equipment, fixtures, and partition assemblies.
6. Provide and coordinate all required wall pad cut outs for wall mounted devices and signage.

**II. Theatrical Rigging**

1. Submit receive approval, and deliver equipment and material so as to maintain the project schedule as directed by the Construction Manager
2. This contractor shall provide all switches, controllers, and necessary wiring from the controller/switch to the motors for the equipment. Power to controller/switch will be provided by the electrical contractor. Coordinate work with the electrical contractor.
3. Coordinate locations of all wall devices with the architectural drawings.
4. Provide all means of support and attachments for all equipment back to the structure. Provide all miscellaneous steel supports which are not shown on the drawings but

are required to complete the work of this bid package. Include primer and touch-up paint on prefinished materials.

5. Submit complete coordination drawings in conjunction with BIM coordination indicating location of equipment in relation to MEPFP equipment, fixtures, and partition assemblies.

#### **JJ. Elevator**

1. Subcontractor shall include an allowance of (60) hours of operator time for each elevator for miscellaneous trades to complete associated work within elevator shaft. Subcontractor shall track time spent against this allowance in conjunction with Fontaine Superintendent and shall have slips signed each day reflecting time spent. Subcontractor shall be compensated or provide a credit upon project closeout based upon amount of this allowance used.
2. Subcontractor shall perform all activities related to elevator testing and commissioning as part of this scope of work at no extra charge. These activities include providing labor as required for alarm testing, elevator louver testing, and inspections.
3. Subcontractor shall include removal of all components not necessary for operation of elevator upon completion of installation including excess hydraulic oil if directed by the CM.
4. Subcontractor shall participate in and sign off on elevator room layout. Subcontractor shall make diligent efforts to avoid conflicts with other trades.
5. Include provisions for temporary power connections to operate cab during installation.
6. Subcontractor's employees shall maintain the guardrail system put in place by others during performance of their work. Subcontractors shall remove guardrails only as necessary to provide access to cab/shaft and shall replace guardrails immediately when possible. Subcontractors employees who create a safety hazard at any time will be immediately dismissed from the project.
7. Subcontractor shall make all efforts necessary to complete installation and inspection of elevator as quickly as possible to allow for temporary and permanent operation. Subcontractor shall allow temporary use of elevator with operator as feasible and shall allow use of elevator immediately after inspection regardless of whether or not substantial completion has been reached.
8. Subcontractor shall make provisions to provide specified warranty period from date of certification of occupancy or acceptance of the building, whichever is later, including provisions to provide extended warranties if necessary.
9. Provide all drawings and documentation required for inspections in a timely manner so they can be reviewed and stamped by the design team prior to elevator inspection.

#### **KK. Fire Protection**

1. Pre-install hangers prior to fireproofing.
2. Maintain as built drawings in the most recent version of AutoCAD, updated as-built drawings shall be a prerequisite to monthly payment.
3. Provide sleeves/coring as necessary for work of this subcontractor, provide firestopping through fire rated partitions. Provide acoustical sealant at all acoustical partitions.
4. All bidders are directed to review all disciplines of the bid documents prior to submitting a price. The drawings and specifications are complimentary and bidders' prices shall reflect all Fire Protection work regardless of where it is shown in the documents.
5. Furnish and install seismic bracing as required by codes and shown on drawings,

whichever is more stringent.

6. Subcontractor shall complete all commissioning and start up procedures in accordance with the specifications and as directed by the project team.
7. Fire protection contractor shall arrange for all inspections and tests, including pressure tests as required by applicable codes and engineers. Fire protection contractor shall notify Fontaine Bros. in advance of any such test and shall provide written documentation of all test performed.
8. Subcontractor shall comply with Engineer's requirements in regards to raising of fire protection piping as far above ceiling as possible at no additional cost.
9. Fire protection systems installed under this subcontract shall continue to 10 feet beyond the building perimeter. This contractor shall oversee installation of exterior fire protection system components by the site contractor as required by code.

#### **LL. Plumbing**

1. Pre-install hangers prior to fireproofing.
2. Maintain as built drawings in the most recent version of AutoCAD, updated as built drawings shall be a prerequisite to monthly payment.
3. Plumbing systems installed under this subcontract shall continue to 10 feet beyond the building perimeter.
4. Plumbing subcontractor shall include all drilling, coring, and sleeving required for this scope of work.
5. Subcontractor shall provide firestopping at all penetrations through fire rated systems and acoustical sealant at all acoustical systems.
6. Furnish and install seismic bracing as required by codes and shown on drawings, whichever is more stringent.
7. Subcontractor shall complete all commissioning and start up procedures in accordance with the specifications and as directed by the project team.
8. Plumbing contractor shall arrange for all inspections and tests, including line tests, as required by applicable codes and engineers. Plumbing subcontractor shall notify Fontaine Bros. in advance of any such test and shall provide written documentation of all tests performed.
9. Provide submittals for any materials on or penetrating the roof within 2 week of notice of intent.
10. Pressure test all lines. All testing shall be witnessed by Fontaine Bros and inspector. Provide written documentation of each test performed.
11. Protect floor drains until building has been turned over to the owner. ALL damage to floor drains will be repaired by and at the cost of the plumbing subcontractor regardless of the cause.
12. Provide all labor, equipment, and material necessary to provide temporary gas piping from LP Gas tanks provided by others outside of the building to temp heat units inside the building. Assume that there will be (5) LP gas tanks piped to a total of (5) temp heat units.
13. Furnish and install plumbing utility connections to food service equipment, including but not limited to LP, gas, sanitary waste and venting. Provide manpower to assist/work with Fontaine and Food Service equipment vendors and manufacturer's representatives to start up and commission all kitchen equipment as well as commission life safety systems.
14. Provide coring/sleeving for any work penetrating foundation walls and slabs after installation of foundation walls and slabs.
15. All bidders are directed to review all disciplines of the bid documents prior to submitting a price. The drawings and specifications are complimentary and bidders' prices shall reflect all plumbing work not explicitly included in another scope of work, regardless of where it is shown on the documents.

16. Cut metal deck penetrations at framed openings in coordination with Fontaine schedule.

**MM. HVAC**

17. Preinstall hangers prior to fireproofing.
18. Maintain as built drawings in the most recent version of AutoCAD, updated as built drawings shall be a prerequisite to monthly payment.
19. Furnish and install seismic bracing as required by codes and shown on drawings, whichever is more stringent.
20. Provide submittals for roof top units, air handlers, and other roof top units within 2 weeks of notice of intent. Provide resubmittals on this material within 1 week of returned submittal.
21. Mechanical equipment shall be procured as quickly as possible, and shall be stored off site if necessary until required for installation.
22. Comply with IAQ Management Plan, protection of ductwork, and all other **LEED** requirements.
23. Provide for full building flushout per **LEED** requirements including filter change and documentation.
24. Include construction filters and media protection for use of mechanical system during construction including filter/media changes as required.
25. Subcontractor shall provide coring/drilling/sleeving for any work associated with HVAC scope.
26. Subcontractor shall complete all commissioning and start up procedures in accordance with the specifications and as directed by the project team.
27. Furnish access panels required to access work of HVAC subcontractor, install by installer within whose finish surface they rest.
28. Subcontractor shall provide firestopping at all penetrations through fire rated systems and acoustical sealant at all acoustical systems.
29. Furnish and install all louvers on the project, including louvers connected to HVAC equipment, architectural louvers, elevator louvers, etc.
30. Provide all hoisting, staging, lifts, rigging, etc. required to complete this scope of work, including crane for setting of mechanical curbs on roof.
31. All bidders are directed to review all disciplines of the bid documents prior to submitting a price. The drawings and specifications are complimentary and bidders' prices shall reflect all HVAC work not explicitly included in another scope of work, regardless of where it is shown on the documents.
32. HVAC subcontractor shall ensure that HVAC system is fully operational prior to installation of millwork and casework as dictated by project schedule. HVAC subcontractor shall include provisions necessary to operate system during construction and deliver a fully operational and cleaned out system for occupancy including necessary filter changes etc. In the event that HVAC subcontractor fails to provide a fully operational system prior to installation of millwork and casework, HVAC subcontractor shall provide dehumidification, humidification, and temperature control to ensure that building environment meets standards within those specs.
33. Cut metal deck penetrations at framed openings in coordination with Fontaine schedule.
34. Deliver roof top equipment over multiple mobilizations as required by schedule and as coordinated with the CM.

**NN. Electrical**

1. Pre-install hangers prior to fireproofing.
2. Maintain as built drawings in the most recent version of AutoCAD, updated as built drawings shall be a prerequisite to monthly payment.
3. Furnish and install seismic bracing as required by codes and shown on drawings, whichever is more stringent.
4. Provide all submittals within four weeks of execution of subcontract
5. Subcontractor is responsible for furnishing all access panels required to access work of this subcontract. Access panels shall be installed by subcontractor within whose finished surface they rest.
6. Subcontractor shall provide temporary power
  - a. Subcontractor shall provide temporary power within building footprint and within 50 feet of perimeter of building footprint for all trades. Subcontractor shall provide power per OSHA standards within one week of notice of intent to award subcontract. Subcontractor shall provide temporary power by any means necessary, **including providing generators and fuel**. Subcontractor shall replace generators and fuel with temporary power connection from utility as soon as possible.
  - b. Subcontractor shall provide all pads, bollards, and other accessories required for temporary and permanent power provision. Subcontractor shall provide excavation, backfill, conduit, and concrete if necessary for encasement of temporary power.
  - c. Subcontractor shall provide connections to CM trailer as well as OPM/Owner trailer/office as part of bid. It is understood that these facilities may be moved during the construction period, and that these relocations will be performed at no additional cost. Power provided to CM and Owner trailers/offices shall be sufficient to power everyday operations including operation of computers, copiers, printers, and heating equipment integral to trailers/offices.
  - d. Subcontractor shall provide temporary lighting and power system within the building per OSHA requirements or specification requirements, whichever is more significant. Subcontractor shall maintain system until directed to remove system by Fontaine Bros. and shall not remove temporary system until permanent systems are in place. Subcontractor shall include dismantling system safely and without further damage to installed finishes around system. Subcontractors whose system runs through shall include provisions for patching holes left by system, painter shall include painting patches.
  - e. Subcontractor shall provide wiring to temporary heating equipment provided by Fontaine Bros, including special connections, and disconnections, as part of base bid.
7. Subcontractor shall provide labor, material, and connections to provide power to all systems requiring power shown on plans, even if wiring is not specifically shown on the electrical plans.
8. Subcontractor shall furnish and install low voltage wiring as required for window shades, gymnasium equipment, curtain and rigging, food service equipment, overhead doors and controls, and similar equipment furnished and installed by others that requires low voltage wiring to and from controls or at other connection points.
9. Furnish and install site electrical, including, but not limited to feeders, conduit, supports, and equipment. Excavation and backfill by others. Coordinate with sitework subcontractor.
10. Subcontractor responsible for all precast and prefabricated equipment pads related to Electrical work.
11. Schedule testing and inspections expeditiously and in advance of required contract dates. Coordinate with Fontaine field personnel.
12. Provide coring/drilling/sleeving at penetrations required for electrical work.

13. Subcontractor shall provide firestopping at all penetrations through fire rated systems and acoustical sealant at all acoustical systems.
14. Subcontractor shall complete all commissioning and start up procedures in accordance with the specifications and as directed by the project team.
15. Provide coring/sleeving for any work penetrating foundation walls and slabs after installation of foundation walls and slabs.
16. Subcontractor shall include in their bid provision of labor, material, and equipment necessary to make special connections for equipment requiring special power such as floor grinding machines, masonry saws, dehumidifiers, fans, etc.
17. Provide labor, equipment, and material necessary for connection and operation of temporary heating systems during winter of 2019-2021. Remove and dispose of materials when directed by Fontaine Bros.
18. All bidders are directed to review all disciplines of the bid documents prior to submitting a price. The drawings and specifications are complimentary and bidders' prices shall reflect all Electrical work not explicitly included in another scope of work, regardless of where it is shown on the documents.
19. Cut metal deck penetrations at framed openings in coordination with Fontaine schedule.
20. Commissioning and testing.

BIM EXECUTION PLAN

## **BIM Execution Plan and BIM Requirements for Subcontractors**

### **1 Introduction**

In the past years, Building Information Models (BIM) have evolved from being a specialty application that was primarily used on process industry projects to an accepted and valued tool in the general building industry. BIM for building projects has demonstrated its value to construction practitioners on the design and construction side. BIM representing design or shop drawing information in three dimensions has proven to be a beneficial tool for representing, sharing and coordinating information among the participants of a project. In addition to 3D geometrical information BIM can also contain information that is associated with building elements, spaces or buildings in general e.g. schedule information, cost information, status information, submittal information etc. At this time, BIM is still an evolving topic in our industry that will keep expanding in its use and application. While there are many aspects of BIM that are new and are in the process of being defined, other areas, such as 3D coordination of disciplines and trades, have already proven their value. To date the overwhelming majority of projects that use BIM for discipline and trade coordination, report a higher degree of accuracy and reliability of the coordination effort. This higher degree of coordination translates into reduced re-work in the field. In a secondary effect the high level of coordination and trust in the coordination effort often results in subcontractors feeling confident to raise their level of pre-fabrication on BIM projects and hence generate savings through more efficient fabrication practices. While Fontaine Bros. cannot guarantee or prescribe any certain level of trust and pre-fabrication to happen on the project, we are committed to creating an environment in which the project participants provide the best of their work product to our client and at the same time work efficiently and profitably. It is Fontaine Bros. intent to leverage the practical, tried and proven aspects of BIM to their greatest extent. At the same time, it is not Fontaine Bros. intent to use every possible facet of BIM without seeing a clear benefit for the project. The intention of this document is to provide clarity about Fontaine Bros. BIM Process and the requirements for participating in that process.

### **2 The BIM Based Trade Coordination Process**

#### **2.1 Modeling requirements for subcontractors**

On the project Fontaine Bros. will implement a collaborative BIM Process for the coordination of the trades specified in Section 8 in this document. The purpose of the coordination effort is to reach agreement on the usage of space for components installed by the different subcontractors, access space and clearance space. In this coordination process the subcontractors are required to provide models, called Component Models, for the scope of their work. Section 8 provides the minimum requirements for the objects that need to be represented in the Component Models of the respective subcontractors. The subcontractors are encouraged to represent all objects and space requirements in the model that they deem necessary to coordinate their scope of work with the other trades. The subcontractors may use reasonable abstractions for representing the objects and elements of their scope of work, e.g. box representations for cable trays and light fixtures. The abstractions must be appropriate to allow meaningful interpretation and coordination between the trades.

#### **2.2 Structuring the models**

The Component Models need to be broken down into areas that can be shown on drawings and that correspond with the general sequence of the coordination process with each of these Component Models being represented in one file. For a 10 story hospital, for instance, the models, and files, provided by the subcontractors are broken down by trades and levels. If the facility has a larger footprint the Component

Models will be structured by trades, levels and zones. The practice of breaking down a model by different trades, levels and zones serves multiple purposes: (1) the general sequence of the coordination process can be followed in which the team breaks up the building into different areas, coordinates these areas and signs-off on the coordination of these areas; (2) the models provided by the different project participants are distinct so no two subcontractors need to work on the same model or file and their contributions can be clearly delineated; and (3) the file sizes of the Component Models remain small and manageable for all project participants. The file structure of the Component Models will be determined in the BIM Kick-off Meeting. Please see the example provided in Section 4.

### 2.3 Models are a contract for installation space

For the purpose of field installation the signed off, final models are treated as a contract for space. By modeling their components and their scope of work, including access space etc. subcontractors reserve space. If a conflict arises in the field installation the subcontractor who did not reserve space for his/her components has to move his/her components for the subcontractor who did reserve space at his (the subcontractor who did not reserve space) cost. The subcontractor who did not follow the model also has to compensate other contractors/subcontractors for consequential costs arising from the incorrect installation of his/her components. Components that are not represented in the model will be installed after the components that are represented in the signed-off model.

### 2.4 The modeling and coordination sequence

The sequence and schedule of the coordination is determined by Fontaine Bros. Project Manager on the project. All models and drawings shall be developed in the time frames allotted and submitted so as to not delay the installation of the overall project schedule. In general, the traditional sequence of coordination (Structural Fabrication, Ductwork, Pitched Pipe, Pressure Pipe, Electrical, Fire Protection) will be followed. Exceptions to this sequence may be necessary. The coordination effort for each of the areas will start with a high level overview meeting in which high level agreements between the different trades are reached. These agreements may include: general elevation levels for the installation of the different trades, constraints around vertical riser cores, general agreements on the standard cross sections in corridors etc.

### 2.5 The model sharing, clash detection and coordination process

Figure 1 illustrates the BIM-Based Coordination Process. The process starts with the designers or 3<sup>rd</sup> party modelers providing the architectural and structural Component Models and uploading these models to the file sharing platform. In addition 2D dwg files of the floor plans will also be made available. The Component Models will be made available to all project participants to be used as background models for laying out their scope of work. The subcontractors should use these models and the Component Models provided by the other subcontractors as reference models (x-Refs in AutoCAD based applications), so that their work is represented in a distinct file that does not contain the information provided by the other project participants. Please refer to the provisions in Section 10 (Contract Documents and the model - legal aspects) regarding the reliability of the architectural and structural Component Models.

Fontaine Bros. will make the following material available to the subcontractors on a file sharing site:

| Component                             | Author   | File Format  |
|---------------------------------------|----------|--------------|
| Architectural Model                   | Designer | 3D rvt*      |
| Structural Model                      | Designer | 3D rvt*      |
| Mechanical Floor Plans                | Designer | 2D dwg*+ pdf |
| Electrical Floor Plans                | Designer | 2D dwg*+ pdf |
| Plumbing Floor Plans                  | Designer | 2D dwg*+ pdf |
| Architectural Floor Plans             | Designer | 2D dwg*+ pdf |
| Architectural Reflected Ceiling Plans | Designer | 2D dwg*+ pdf |

|  |          |              |
|--|----------|--------------|
| Architectural Sections and Elevations  | Designer | 2D dwg*+ pdf |
| Structural Floor Plans   | Designer | 2D dwg*+ pdf |
| Structural Sections and Elevations   | Designer | 2D dwg*+ pdf |
| Others   | TBD      | TBD          |
| * Autocad (dwg) and Revit (rvt) files will be provided if appropriate model or cad files will be provided to Fontaine Bros. by the design team |          |              |

Following the agreed upon coordination sequence the subcontractors will develop the layout of their scope of work and upload their Component Models to the file sharing platform. In accordance with an agreed upon schedule Fontaine Bros. will download the latest Component Models from the file sharing platform and create a Federated Model. A Federated Model is a model that superimposes the Component Models provided by the project participants and allows delineating the Component Models from each other in the superimposed representation. The Model Review software, in which the Federated Model is created, allows automated and efficient identification of the physical clashes between the Component Models. Fontaine Bros. BIM Manager will highlight the identified clashes and conflicts in the Federated Model. That Federated Model will be made available to all project participants on the file sharing platform before the coordination meeting. The clashes identified in the Federated Model will be discussed in the coordination meeting. The subcontractors are required to bring their laptop computers with the relevant software installed on the computers to the coordination meetings so that smaller clashes can be resolved right at the coordination meeting. For clashes that require more re-modeling work a conceptual solution will be developed and documented in the coordination meeting and the subcontractors will make adjustments to their Component Models in their home offices. Fontaine Bros. may elect to use web meetings for the coordination process. The coordination process is an iterative process that typically requires weekly in-person coordination meetings. In addition to that web-based coordination meetings (2-3) per week may be conducted. If conflicts or interferences in the coordination process cannot be satisfactory resolved the Architect shall be notified for his/her decision to be obtained.

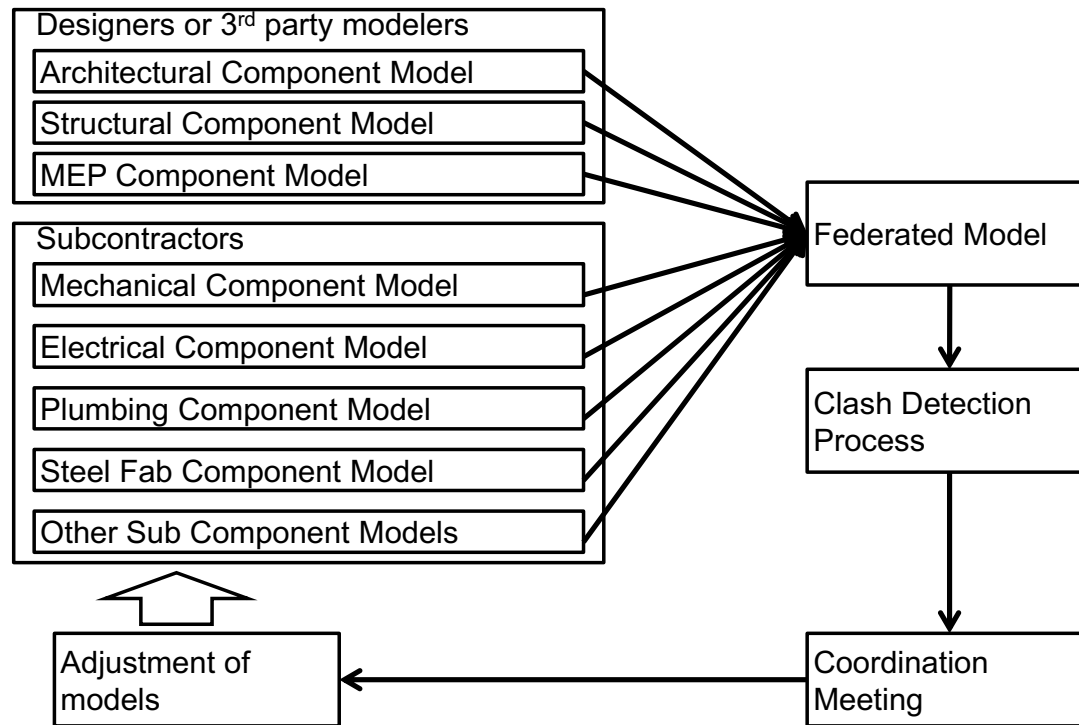

Figure 1. The BIM-Based Coordination Process (generalized version; project specific situations may be slightly different)

## 2.6 Specific Responsibilities of the Subcontractors

In the coordination process Fontaine Bros. requires the subcontractors to upload their models on a frequent basis as they are being developed to the provided file sharing platform. Uploads may be requested on a frequency between once a week and daily depending on the requirements on the project. This frequent sharing of the work as it is being developed allows the following subcontractors to make themselves familiar with the constraints on the project early and voice possible concerns before the predecessor trades finalize their work.

It is Fontaine Bros. intent to create an environment in which clashes in the models between the trades are avoided in the first place, rather than identified and resolved in an iterative process. Fontaine Bros. therefore requires the subcontractors to have a Model Review software (see section 5 of this documents) installed on their computers and perform clash tests using their own Component Models and the Component Models of the other trades that are available on the file sharing platform. These clash tests should be performed as the models are being developed, at a minimum on a daily basis. The subcontractors shall coordinate among each other via phone, through the file sharing server and by using online meeting tools to resolve as many clashes as possible before the coordination meeting.

The purpose of the modeling and coordination process is to develop a layout that works for all trades participating in the project, not just for the trades leading in the coordination process. It may therefore be necessary that portions of the model that have been developed need to be re-configured and re-coordinated. For the purpose of developing a workable solution to coordination issues that follows the design intent represented in the design documents and accommodates for the coordination constraints arising in the coordination process the subcontractors may need to develop a solution that requires additional components (e.g. pipe, fittings, elbows, hangers, cable tray etc.).

For the purpose of coordination and development of shopdrawings the design drawings created by the design team provided through Fontaine Bros. are the authoritative documents that shall be followed. It is

the responsibility of the subcontractors to check if any provided design models are in agreement with the authoritative design documents.

For each Component Model provided the respective subcontractor assumes responsibility for the constructability of the system within the spatial requirements described in the model. This includes hanging and support requirements.

Figure 1 also shows that the BIM-Based Coordination Process does not change the fundamentals of the coordination process. The design team develops the design Component Models and the sub-contractors create the shopdrawing – level Component Models. Fontaine Bros. does neither create design nor shopdrawing information. Fontaine Bros. role is to facilitate an efficient coordination process and ensure the constructability of the project.

## **2.7 Maintaining the Models and Drawings**

All subcontractors are required to install their systems in the spaces that they reserved in the model-based coordination process so that the coordinated and signed-off model becomes the AS BUILT model and the coordinated drawings become the AS BUILT drawings. If changes or adjustments become necessary, these changes or adjustments need to be represented in the respective Component Model, checked for constructability in the Federated Model and coordinated with the other subcontractors involved in the coordination effort and coordinated with Fontaine Bros. Only after Fontaine Bros. review and written approval of the updated Component Model can changes be implemented in the field. It is the subcontractor's responsibility to ensure consistency between their Component Models and drawings at any point in time.

## **2.8 Installation in the Field**

Subcontractors have to coordinate the installation sequence among each other AND with Fontaine Bros. This coordination may be required even early in the coordination process, but in any case before installation of the components in the field. Components that are not modeled will be installed after the components that are represented in the model.

## **2.9 Installation in the Field**

The design team indicated that they will make available their Design Models in Revit format. The design team states that some members of the design team are new to Revit and that they cannot make any representation regarding correctness and accuracy of the models. The authoritative contract documents are the pdf drawings issued by the design team. The design team will be available for model review sessions in order to identify and discuss area that require definition or where the design needs to be adjusted for constructability. Fontaine Bros. will moderate and facilitate the processes of collaborating with the design team and the design team has indicated interest in participating in this collaborative process, but there is no legal requirement (relative to the relationship between Fontaine Bros. and the design team) for the design team to provide particular participation or services in the process.

## **3. The Setup Process**

The setup process for BIM-Based Coordination will involve the coordinators of the project participants listed in Section 8 and will comprise the following activities:

- BIM Kick Off Meeting:
  - o Development of the coordination sequence and the coordination schedule
  - o Definition of the breakdown structure of the model into Component Models with each of the Component Models represented in one file
  - o Determination of the governing coordinate system for all model files
  - o Establishing the agreed upon origin points

- Establishing the File Naming Conventions
- Setup of the file sharing platform (done by Fontaine Bros.)
- Proof of concept of the interoperability of the different modeling systems used on the project (all participants involved)
- Training for model review and clash detection (provided by Fontaine Bros.)
- Process training and training on using the file sharing platform (provided by Fontaine Bros.)
- Development of file format exchange protocols and installation of Object Enablers

Typically, it takes up to 2 weeks after the BIM Kick-off meeting until the systems of the project participants are setup in a way so that they can efficiently exchange files.

#### **4. Modeling, Model File and Drawing File Requirements**

The subcontractors have to provide their files in a file format that is useful for the coordination team for spatial coordination. The minimum requirement for the model files are the following:

- AutoCAD 2013 \*.dwg file format with components of the subcontractor's scope represented as 3D Solids. In addition the provision of the component model files in their native file format may be requested. The use of formats other than \*.dwg needs to be coordinated with Fontaine Bros. BIM Manager.
- The coordinate system of the model(s) will be determined in the BIM Kick-off Meeting. As a default the coordinate system is the coordinate system of the structural design Component Model.
- The x,y components of model files and drawing files (e.g. for coordinated composite drawings, shop drawings and installation drawings) need to agree so that files can be superimposed in a meaningful way without adjustments to the coordinate systems. It is encouraged to make the 3D model files and the 2D drawing files one and the same file with the annotation layers turned off in the model file representation.
- The layer names of the submitted model files need to be intuitive for construction practitioners
- Access spaces and clearance spaces represented in the model need to be represented on a layer named CLEARANCE. Layers should be organized by Systems and need to be coordinated and approved by Fontaine Bros.
- Annotations have to be on layers separate from layers containing 3D geometrical information and have to be designated as annotation layers.
- The breakdown structure of the Component Models and the names of the corresponding files will be determined in the BIM Kick-off Meeting.
- The coordinate systems in the different model files provided by the subcontractor need to be coordinated with each other in a way that the models will fall into place when superimposed in NavisWorks or referenced-in in Autocad-based applications. There must be no overlap or disconnect between the components represented in different model files.
- The building elements represented in the model need to be of a granularity that corresponds with the anticipated installation sequence, so that the model can be linked to a schedule and the construction process can be simulated.

- Participants in the coordination process have to upload their respective Component Model files to the designated locations on the project file sharing platform.

## **5. Hardware and software requirements**

The requirements stated below are for the following trades:

- Structural, Mechanical, Ductwork, Plumbing, Electrical, Fire Protection, Pneumatic Tube, Controls

Requirements:

- Functional personal email address for each coordinator
- Internet connection from the office that allows general internet access, access to collaboration tools (e.g. GotoMeeting, Webex etc.) and access to the file sharing platform
- Fully functional Model Review software that can load the models and file formats specified in this document and can perform comprehensive clash detection. These Model Review software may be: Autodesk Navisworks Manage, Tekla BIM Sight (generally free software; please confirm before bidding project; <http://www.teklabimsight.com>), Solibri

## **6. BIM training and support**

Throughout the project duration Fontaine Bros. designated BIM Manager will be the direct point of contact for all subcontractors for BIM related questions. The BIM Manager will establish the protocols for efficient file sharing and hold training sessions for clash detection and for using the file sharing platform.

At the request of the contractors Fontaine Bros. can provide training and support for the model review software and the file sharing platform.

## **7. Sign Off and Coordination Drawing Requirements**

On the project it is the Sheet Metal Subcontractor's responsibility to assemble the coordinated composite drawings. Each subcontractor/trade listed in Section 8 shall provide the sheet metal subcontractor with the files in dwg-format so that he/she can assemble the coordinated composite drawings. These files must be consistent with the model files used for the model based coordination process. It is encouraged that dwg files provided for the creation of the coordinated composite drawings are the model files with the annotation layers turned on.

### **8. Minimum requirements for components represented in models and drawings:**

The requirements for objects to be included in the Component Models provided by the subcontractors are minimum requirements. The subcontractors are encouraged to provide additional objects in their models that facilitate the coordination between the trades. In case of contradictions between inclusions and exclusions in the scope description below the case that imposes the greater duty on the subcontractor shall be considered.

#### **Site Utilities:**

See respective Mechanical, Electrical and Plumbing sections of this document

#### **Structural Steel**

Inclusions: All structural steel members in their true shape and dimensions.  
Exclusions: Nuts and Bolts

#### **Miscellaneous Steel**

Inclusions: All support steel  
Exclusions: Nuts and Bolts, handrails mounted to walls (not to the floor)

#### **Mechanical Systems and Heating, Ventilation, Air Conditioning**

Inclusions: All systems included in the Mechanical Systems scope of work including but not limited to all mechanical piping, distribution, valves equipment, hanging and support systems, insulation, fittings, valves, geothermal systems.  
Exclusions:

#### **Sheet Metal**

Inclusions: All systems included in the HVAC scope of work including but not limited to all ductwork, diffusers, flex duct, VAV boxes, access space for maintenance of installed equipment, Air Handler Units, fans, pumps, tanks, control boxes and panels, heat exchanges and all components included in the subcontractor's scope that are generally relevant for space coordination.  
Exclusions: Flanges, insulation, access doors, hangers and support systems.

#### **Plumbing Systems**

Inclusions: All systems included in the plumbing scope of work, including underground lines including but not limited to pipe, pipe racks and support structures, hangers, distribution systems and equipment included in the plumbing scope of work; medical gas systems, gas, gas tanks; rain water leaders, pressure and drainage pipe  
Exclusions:

#### **Electrical Systems**

Inclusions: All systems included in the electrical scope of work, including, but not limited to all conduit in conduit racks carrying more than 3 conduits, light fixtures, required clearance space (e.g. in front of electrical panels, around light fixtures, access to electrical J-Boxes); ceiling plane, underground systems.

Receptacles, switches, junction boxes

Speakers, cameras, clocks, and similar electrical equipment. This also includes clearance and access spaces.

Exclusions: Conduit 1" and smaller if not more than 2 conduits are in the area.

#### Fire Protection Systems

Inclusions: All systems included in the Fire Protection scope of work, including but not limited to pipe, sprinkler heads, valves, fire pumps, hangers

Exclusions: none

#### Control Systems

Inclusions: All systems included in the Control Systems scope of work, required clearance space (e.g. in front of control panels)

Exclusions: Conduit 1" and smaller

#### Kitchen Equipment and Systems

Inclusions: All systems included in the Kitchen Equipment scope of work, required clearance space (e.g. in front of panels, for service and maintenance), connection points to power, water, utility lines.

Exclusions: Interior details of equipment.

#### Case Work and Mill Work

Inclusions: Case work and mill work components that are to be modeled. Case work and mill work that is accurately represented in its to be installed shape, form and location can be copied from the design model into the trade contractor's component model.

Exclusions:

#### Gym Equipment

Inclusions: All gym equipment that is attached or stationary is to be modeled. This also includes support systems, divider walls as well as clearance zones.

Exclusions:

### 9. Facility Management Related Requirements

It is the intention of the Owner and Fontaine Bros. to use the model for Facility Management related purposes. The owner and Fontaine Bros. will develop a list of elements and equipment that are of interest for Facility Management purposes. These elements are to be coded in the model with specific information.

For this reason the subcontractors are required to:

- To structure models such that elements that are of interest for Facility Management Purposes can be isolated
- Insert provided hyperlinks into these elements
- Insert specific property information into these elements

#### **10. Contract Documents and the model - legal aspects**

The models provided by the design team or 3<sup>rd</sup> party modelers and provided to the subcontractors are for information only and are not contract documents. Fontaine Bros. does not make any representation regarding completeness or fitness of models provided by the design team for the coordination process. The contract documents remain the paper or pdf versions of the design drawings provided by the design team and provided to the subcontractors. Fontaine Bros. requires coordination of the systems listed under Section 8 in BIM even though the model provided is not a contract document. It is the subcontractor's responsibility to check if the model agrees with the contract drawings and report any discrepancies and inconsistencies to Fontaine Bros.

The provided design documents do represent design intent, but are clearly not fully coordinated between disciplines and systems. In order to ensure constructability of the design the coordination process described in this document needs to be followed and implemented by relevant project participants. Deviations between the design documents and final coordinated product may need to be developed with the design team and coordinated with the design team. If these deviations are within the scope of typical coordination of comparable BIM projects the costs need to be borne by the subcontractor.

The requirement to provide coordinated and signed off drawings remains un-affected by the requirements and provisions described in this document.

The subcontractor grants a non-exclusive copyright license for the Component Models created in the modeling process to Fontaine Bros., including the right to provide or sell the model or parts of it to owner or other entities, e.g. for the use in Facility Management systems. If the model is published Fontaine Bros. or the user of the model designated by Fontaine Bros. is not required to mention the creator of the model.

#### **11. Specific Additional Requirements**

1. The Plumbing systems contractor is also to include any site utility systems related work in its scope of modeling and drawing
2. The Sheetmetal contractor is to compile composite drawings for submission to design team of the shop drawings provided by other team members.

**Note: All references to “The Joint Venture” refers to Fontaine Bros. Inc. and W.T. Rich who have contractually entered into the Worcester South High School Project as a Joint Venture.**

**\*This is a Smoke-Free Project per the Massachusetts Education Reform Act. This includes cigarettes, cigars, pipes and vaping.**

**“ No Smoking” Signs will be posted throughout the project.**

## **Introduction**

Communication and training is an integral part of the program, and should be emphasized over the duration of the project. In order to facilitate the above, every employee on site shall follow the established policies and procedures, report hazardous conditions and mitigate “areas of concern” before an illness, injury, near miss or other incident is realized. Contractors as well as other persons on this site are obligated to follow the same rules and regulations that have been implemented for the contractors in accordance with the requirements of, but not limited to; the federal Environmental Protection Agency (EPA), the Occupational Safety and Health Administration (OSHA) or other state and local agencies, and this safety program.

The goal of this program is to provide a healthy and safe working environment for everyone as well as to protect the site and the environment to the best of our ability.

## **Scope**

The Project includes, but is not limited to, a new High School constructed behind the existing South High Community School. Facade construction to be brick veneer, fiber cement panels and composite metal panels; metal stud back-up; aluminum windows and curtainwall systems; PVC roofing. Primary structural frame to be structural steel with applied fireproofing where noted. Exterior site work, play areas, parking and paving on grade are also included. Project to be phased construction, the existing school is to be demolished during the last phase.

## **Primary Requirement**

“The Joint Venture” shall make all personnel on site, including sub-contractors aware of this site-specific safety plan, and emergency action plan(s), prior to initiation of work when practical. This notification shall include; site specific program content, special project concerns and hazards, owner modifications, the training requirements for the project, including the day and time of the “tool box” talks, the reporting of hazards, illnesses, injuries and “near-misses”, any dangerous or out-of-service equipment, and the location of all the plans, manuals, SDS and JHA / JSA’s. All reports, including accidents, incidents, out-of-service equipment and other information related to this plan shall be submitted to the Project Manager/Site Superintendent for corrective action and distribution.

## Safety Vision and Guiding Principles

The management of "The Joint Venture" is very interested in working with you to provide a safe place in which to work. The prevention of accidents and injuries to employees is the prime objective.

All personnel are expected to take an active and constant interest in the prevention of accidents. We call upon all employees to use good common sense and in all their actions, take a second to think of the consequences to your fellow employees. We cannot overemphasize that all employees must do their part to minimize accidents.

Please show your support by demonstrating the following:

1. OBSERVING COMPANY SAFETY RULES.
2. KEEPING WORK AREAS FREE OF UNSAFE CONDITIONS.
3. AVOIDING AND ELIMINATING UNSAFE ACTS.
4. PROMPTLY REPORTING UNSAFE ACTS AND CONDITIONS.
5. REPORTING ALL ACCIDENTS IMMEDIATELY.

Accidents cause suffering and pain. We value each of you as individuals and hope you will cooperate with us in this important endeavor.

Any constructive criticism or suggestions toward improving safety on any of our jobs will be given prompt and careful consideration.

Sincerely,

---

*"The Joint Venture"*

## **SAFETY MISSION**

**A PRIMARY GOAL OF “THE JOINT VENTURE” IS TO ELIMINATE OR CONTROL BOTH KNOWN AND POTENTIAL SAFETY AND HEALTH HAZARDS WHICH EMPLOYEES FACE ON THE JOB.**

In order to do so, we must adhere to the following guidelines:

- Safety and Health are a shared responsibility. Everyone from top management to supervisors to each and every worker must take ownership of his/her own safety and that of co-workers.
- Maintaining a safe and healthful work environment is not just an idea, it is top priority.
- It is everyone’s job to spot hazards and to correct them or report them in a timely manner.
- Where hazards cannot be completely eliminated, they must be reduced through engineering and/or administrative controls or, as a final precaution, through the proper use of personnel protective equipment.
- Every individual will be trained to perform work safely. Should an individual feel inadequately trained to perform certain tasks, he/she shall immediately discuss the problem with his/her foreman.
- As a condition of employment, each employee must consistently work in a safe manner.

Signature:\_\_\_\_\_ Date:\_\_\_\_\_

## Code of Safe Work Practices

### Personal Protective Equipment and Project Safety Requirements

1. Hard hats are required at all times.
2. Safety glasses are strongly recommended at all times.
3. Class 2 High Visibility Clothing required at all times per latest version of ANSI 107.

“The Joint Ventures” managers and supervisors play a key role in the prevention of accidents on the job. They have direct contact with the employees and know the safety requirements for various jobs.

Safety responsibilities for these individuals include:

1. Enforce all safety rules in the Code of Safe Practices and ensure safe work procedures.
2. Verifying corrective action has been taken regarding safety hazards and accident investigations.
3. Conducting periodic documented inspections of the work sites to identify and correct unsafe actions and conditions that could cause accidents
4. To act as a leader in company safety policy and setting a good example by following all safety rules
5. Becoming familiar with local, state, and federal safety regulations. The Safety Coordinator is available for assistance
6. Train all new and existing employees in proper safety procedures and the hazards of the job
7. Instruct all employees, under their supervision, in safe work practices and job safety requirements
8. Hold weekly safety meetings with employees
9. Ensure employee proficiency when assigning work requiring specific knowledge, special operations or equipment
10. Ascertain that all machinery, equipment, and workstations are maintained in safe working condition and operate properly.
11. Correct unsafe acts and conditions that could cause accidents

12. Communicate with all employees about safety and accident prevention activities
13. Correct the cause of any accident as soon as possible
14. Ascertain that proper first aid and firefighting equipment is maintained and used when conditions warrant its use
15. Maintain good housekeeping conditions at all times
16. Investigate all injuries and accidents to determine their cause and potential corrective action
17. Ascertain that all injuries involving our employees that require medical attention are properly treated and promptly reported to the office

Every worker is responsible for working safely, both for self-protection and for protection of fellow workers. Employees must also support all company safety efforts. Specific employee safety responsibilities include:

1. If you are unsure how to do any task safely, ask your supervisor.
2. Read and abide by all requirements of the Safety Manual.
3. Know and follow the Code of Safe Practices and all company safety policies and rules.
4. Wear all required personal protective equipment.
5. Report all accidents and injuries, no matter how minor, to your supervisor immediately.
6. Do not operate any equipment you have not been trained and authorized to use.
7. Report any safety hazards or defective equipment immediately to your supervisor.
8. Do not remove, tamper with or defeat any guard, safety device or interlock.
9. Never use any equipment with inoperative or missing guards, safety devices or interlocks.
10. Never possess, or be under the influence of, alcohol or controlled substances while on the premises.
11. Never engage in horseplay or fighting.
12. Participate in, and actively support, the company safety program.

## TRAINING

**Training must be provided by competent person/qualified person and documented or “certified” as required.**

Training must be provided for all personnel, specific to the types of work being performed by same.

- Training must be provided and documented for, but shall not be limited to; Fall Protection, Fork Lifts (Powered Industrial Truck Standard), Lockout/Tag out, Personnel Lifts, Respiratory Protection, welding certifications, scaffolding etc.
- All employees must have proof of OSHA 10-Hour Training
- All persons must complete New Employee Orientation prior to the start of work or as practical.

Some training can be provided through “Tool Box” talks, training or similar. Contractors must have proof of training, which can include, but is not limited to:

- Sign-in sheets
- Quizzes
- Training can also be provided by an outside agency or company with special knowledge on the topic being covered.
- Trainer must be competent in the subject material
- Sign in sheets or quizzes can be used for record of attendance
- Trainer providing the information shall provide a copy of training documentation, including information covered

A copy of the training documentation and the accompanying rosters should be maintained by “The Joint Venture”

The Tool Box / Training Sessions for this project or site shall be held on;

*Day of the Week* at \_\_: am

## Job Hazard Analysis (JHA) or Job Safety Analysis (JSA)

A JHA or JSA shall be developed for **all non-routine activities**, as well as for major construction operations. The Analysis shall be performed by a competent person, and shall be appropriately documented.

A copy of the JHA / JSA shall be provided to "The Joint Venture" for review.

The JHA or JSA is performed to be used as an operating procedure, and shall be made available for review and training for personnel performing the identified work.

- A copy of the JHA / JSA shall remain on site.

## OSHA Inspections

The Occupational Safety and Health Administration is part of the U. S. Department of Labor. The OSH Act was promulgated to insure every working man and woman in the nation a safe and healthful working environment and to preserve our human resources. This said, it falls upon all of us to make sure we meet this requirement in our work places.

Our first, best line of defense is the Field Foreman, the person responsible for the day-to-day operation of a construction project. This individual is also known as the "Competent Person", meaning he is capable of identifying existing and predictable hazards in the surroundings, or working conditions which are unsanitary, hazardous or dangerous to employees, AND has the authorization to take prompt corrective measure to eliminate them. The Competent Person is so designated by the employer.

The best practice for an inspection is preparedness. Following the guidelines in the manual will assist you. Here is a brief guide to the steps in an inspection. There may be some variations depending on the Compliance Officer.

NOTE: Discuss if you have questions but NEVER ARGUE with the C.O.

The Compliance Officer arrives on site and presents his credentials to the General Contractor (Prime or Construction Manager). (Now is the time for you to notify the office and call your Safety Manager). He will review the G.C.'s site specific written program (if one exists) as well as the method by which safety is managed on site. If certain criteria are met, he may conduct a "focused inspection". This is a short form inspection and it is often dealt with quickly.

### Typically, a General, Comprehensive Inspection follows this pattern:

1. The C.O. will
  - a. Request for review, a copy of your safety manual and MSDS.
  - b. Ask you where your written Hazard Communication Program is.
  - c. Ask for your name, employer, local no.
  - d. Request a copy of the Company's OSHA 300 log
2. The inspection begins:
  - a. Anyone who has an interest in the inspection (that is you) may accompany the C.O. during his walk thru (bring paper, pencil, camera)
  - b. Make notes as to what the C.O. alleges is a violation on your part
  - c. Take the same pictures the C.O. takes
  - d. Your troops will be interviewed away from your presence
  - e. A closing conference will be held at the job site at which you must be present. This is when the C.O. will spell out what violations may be cited. Make notes.
3. Post inspection

- a. Citations are mailed to the employer and are to be posted at the job site.
- b. The employer makes an appointment for an Informal Conference, at which he presents a defense.
- c. The violations listed on the citation must be abated (removed, corrected and/or protected) within the time constraints listed on the citation.
- d. A letter stating the methods by which violations were abated must be sent to the issuing OSHA office.
- e. A conclusion is reached and fines are paid or violations are contested.

## **TYPICAL SERIOUS HAZARD DEFINITIONS**

1. Fire hazards and lack of fire extinguishers.
2. Lack of fall protection.
3. Objects falling from above which could strike and injure an employee working below
4. Open-sided floors and unprotected floor openings where a fall would result in serious injury or death
5. Trenching and excavations which are not protected from cave-in or slide
6. Unprotected energized electrical systems/parts which would result in electrocution
7. Lack of grounding of temporary wiring, flexible cords, electrical tools, etc. or ground fault circuit interrupters which could cause electrical shock or electrocution.
8. Environmental hazards such as toxic fumes, toxic mists, or dusts, etc.

## **Project Safety Orientation**

### **All new employees shall receive safety orientation.**

Each employee will receive a New Employee Orientation provided by the Construction Management Team. The orientation session will include a summary of the key aspects of the "The Joint Venture" Policy and identification of hazards of the site.

### **Orientation attendance shall be documented.**

## **PROGRAM ENFORCEMENT**

Each Subcontractor:

- Shall assume responsibility for safety program enforcement by his/her foremen
- Shall see that all accidents or losses are properly investigated and the information passed on to the Construction Management in a timely manner
- Shall see that all new employees receive proper safety indoctrination
- Shall provide proper personal protection equipment (PPE) including hard hat and safety glasses for each worker
- Shall enforce proper use of PPE
- Shall hold weekly Safety Meetings and return signed attendance sheets to the construction manager
- Shall assist with accident investigation to insure proper reporting and documentation, using the information to prevent future loss incidents from occurring.
- During job progress audits, the foreman should be alert for hazardous conditions which could cause a lost time injury or property damage and unnecessary costs to the company
- Shall have the conditions corrected immediately or remove employees from exposure
- Contact the construction manager and communicate the hazard, identify the hazard and its specific locations so that formal contact can be made.

## EMPLOYEE ORIENTATION

Each individual being hired to work at this jobsite will be required to attend an Employee Orientation session prior to beginning employment. The goal of the employee orientation session is to familiarize each employee with the policies and procedures of the work site. The sessions will be conducted prior to the start of work for all new employees.

The following is an outline of the items to be reviewed at each session.

| Task                               | Responsibility |
|------------------------------------|----------------|
| Safety and Loss Control Policy     |                |
| _____                              |                |
| Review of Safety Manual/Procedures |                |
| _____                              |                |
| Review the Emergency Action Plan   |                |
| _____                              |                |

At the conclusion of the orientation, the employees will be given the training confirmation Sheet to fill out. The company representative should review the completed Safety and Health Information for any potential work limitations and advise the Project Manager/Foreman accordingly. The employee then proceeds to the jobsite, and reports to the project foreman for employment.

## **SAFETY HANDBOOK ORIENTATION**

### **YOUR SAFETY REQUIREMENTS**

THIS SHEET MUST BE REVIEWED WITH EACH NEW EMPLOYEE WHEN HE IS ISSUED THE HANDBOOK AND SIGNS THE TEAR OUT FORM IN THE FRONT OF THE HANDBOOK.

#### **Personal Equipment**

- A hard hat must be worn at all times
- Wear a safety harness in elevated areas (6' or more) not protected by guard rails
- Respirators and rubber gloves are to be used on special jobs
- Safety glasses are required when the potential for flying object hazard exists

#### **Tools and Equipment**

- Do not alter tools or guards and use only for their designated purpose.

#### **Barricades**

- Required for excavations and around overhead work. Hole covers or barricades must be placed at all floor openings.
- Do Not cross barricades or taped off areas.

#### **Ladders**

- Straight and extension ladders must be tied off.
- Stepladders must be fully opened and set level.
- Stay off the top step of stepladders.

#### **Welding, Cutting and Burning**

- Remove combustible materials from the immediate area.
- Check equipment for safe working condition.
- Always have a fire extinguisher for the job.

#### **Rigging**

- Never raise or load over people.
- Use tag lines to control a load.
- Know capacities of chain falls, come-alongs, chokers, shackles and clamps and know the weight of the loads.

#### **Orderliness**

- Keep everything in its proper place.
- Put scrap, trash and other waste in the right containers.
- Clean up tools and work areas as your job progresses.

- Keep cords and hoses raised seven (7) feet overhead or Protect them in walkways.
- Keep all material, tools and equipment in a stable position to prevent rolling or falling.
- Maintain clear access to all work areas.

#### **Other**

- Never enter a tank or confined space without a valid "Tank Entry" permit.
- Read all labels on containers of petroleum fuels, solvents, thinners, degreasers, protective coatings, acids and caustics. Ask for a copy of the Material Safety Data Sheet (MSDS) for more detailed information.
- Inspect all electrical tools and cords before each use.

## **COMPLIANCE AND ENFORCEMENT**

The compliance of all employees with our Safety Manual is mandatory and shall be considered a condition of employment.

The following programs will be utilized to ensure employee compliance with the safety program and all safety rules.

- Training programs
- Retraining
- Disciplinary action
- Optional safety incentive programs

### **Training Programs**

The importance of safe work practices and the consequences of failing to abide by safety rules will be covered in the New Employee Safety Orientation and safety meetings. This will help ensure that all employees understand and abide by company safety policies.

### **Retraining**

Employees that are observed performing unsafe acts or not following proper procedures or rules will be retrained by their supervisor. A Safety Contact Report may be completed by the supervisor to document the training. If multiple employees are involved, additional safety meetings will be held.

### **Disciplinary Action**

The failure of an employee to adhere to safety policies and procedures can have a serious impact on everyone concerned. An unsafe act can threaten not only the health and well-being of the employee committing the unsafe act but can also affect the safety of his/her coworkers

and customers. Accordingly, any employee who violates any of the company's safety policies will be subject to disciplinary action.

Note: Failure to promptly report any on-the-job accident or injury, on the same day as occurrence, is considered a serious violation of the Company's Code of Safe Practices. Any employee who fails to immediately report a work-related accident or injury, no matter how minor shall be subject to disciplinary action.

Employees will be disciplined for infractions of safety rules and unsafe work practices that are observed, not just those that result in an injury. Often, when an injury occurs, the accident investigation will reveal that the injury was caused because the employee violated an established safety rule and/or safe work practice(s). In any disciplinary action, the supervisor should be cautious that discipline is given to the employee for safety violations, and not because the employee was injured on the job or filed a Workers' Compensation claim.

Violations of safety rules and the Code of Safe Practices are to be considered equal to violations of other company policy. Discipline for safety violations will be administered in a manner that is consistent with the company's system of progressive discipline. If, after training, violations occur, disciplinary action will be taken as follows:

1. Verbal warning / \*Possible monetary fine
2. Written Warning. Retrain as to correct procedure or work practice / \*Possible monetary fine
3. Written Warning with 3 day suspension / \* Possible monetary fine
4. Termination from the project / \*Possible monetary fine

As in all disciplinary actions, each situation is to be carefully evaluated and investigated. The particular step taken in the disciplinary process will depend on the severity of the violation, employee history, and regard to safety. Managers and supervisors should consult with the office if there is any question about whether or not disciplinary action is justified. Employees may be terminated immediately for willful or extremely serious violations. Union or contract employees are entitled to the grievance process specified by their contract.

**\*Note: Monetary Fine Classification System is located on page 148**

## SAFETY ORIENTATION VERIFICATION FORM

The Supervisor will verbally cover the following items with each new employee on the first day of their employment.

Employee Name: \_\_\_\_\_

Start Date: \_\_\_\_\_

Job Title / Position: \_\_\_\_\_

Instruction has been received in the following areas.

- ☐ 1. Code of Safe Practices. \*
- ☐ 2. Hazard Communication (chemicals hazards) \*
- ☐ 3. Driving Safety Rules. \*
- ☐ 4. Safety rule enforcement procedures.
- ☐ 5. Necessity of reporting ALL injuries, no matter how minor.
- ☐ 6. Proper method of reporting safety hazards.
- ☐ 7. Emergency procedures and First Aid.
- ☐ 8. Proper work clothing & required personal protective equipment.
- ☐ 9. List all special equipment, such as lifts, employee is trained and authorized to use.
- ☐ 10. Emergency Exits and Fire Extinguishers.

\_\_\_\_\_  
\_\_\_\_\_

\* Give a copy of these items to the employee.

I agree to abide by all company safety policies and the Code of Safe Practices. I also understand that failure to do so may result in disciplinary action and possible termination.

### Employee Warning Notice

## Personal Protective Equipment (PPE)

Includes, but is not limited to the following;

### Eye Protection

Contractors shall be responsible for employees wearing the appropriate personal protective equipment on the construction site, if there is an exposure to a hazardous condition, or if regulations require the use of specified equipment to reduce the hazards on site.

- Safety glasses shall be used for impact and flying objects protection.
- Prescription safety glasses (that meet ANSI Rating) shall have side shields in place, if being used as safety glasses
- Goggles shall be worn whenever chemicals are used, or there is a splash potential
- Face Shields are secondary protection. They must be worn over safety glasses or goggles.

Eye Protections for this project shall be worn;

- When performing work that involves impact
- When using chemicals
- As required by the tool or products manufacturer.

**The use of safety glasses at all times is strongly recommended.**

### Fall Protection

- Shall be supplied and maintained by the appropriate contractor(s)
- All contractors are responsible for the use of fall protection on site.
- All fall protection equipment shall be properly inspected before use, and shall be maintained in accordance with the requirements of the manufacturer
- Fall protection shall be kept clean and stored in appropriate containers (when not in use) to protect it from environmental conditions and other damage
- **Fall protection is required at 6 feet for employees of from trades.**

### Foot Protection

- Appropriate footwear is required. No sneakers, sandals, etc.
- Foot protection shall be work-type specific (i.e. EH – Electrical Hazards, Metatarsal, Etc.)

### Hand Protection

- For this project, the following types of hand protection shall be used;
- \_\_\_\_\_

## **Hearing Protection**

All employees shall be provided with hearing protection to reduce the dB levels in accordance with OSHA requirements.

- The contractors shall make the following hearing protection available :
  - Ear Plugs
  - Ear Muffs
  - Other Engineering Control:
  - \_\_\_\_\_

## **Head Protection**

- Hard Hats shall be worn by all persons at all times.

## **High Visibility Clothing**

- High visibility Class 2 or greater outerwear is required on this project at all times.

## **Safety Requirements**

### **GENERAL RULES**

#### **All Employees**

#### **Ladders and Step Ladders**

1. Read and follow the manufacturer's instruction label affixed to the ladder.
2. Do not use ladders that have loose rungs, cracked, or split side rails, missing rubber footpads, or are otherwise visibly damaged.
3. Keep ladder rungs clean and free of grease. Remove buildup of material such as dirt or mud.
4. Do not place ladders in a passageway or doorway without posting warning signs or cones that detour pedestrian traffic away from the ladder. Lock the doorway that you are blocking with the ladder and post signs that will detour traffic away from your work.
5. Do not place a ladder at a blind corner or doorway without diverting foot traffic by blocking or roping off the area.
6. Allow only one person on the ladder at a time.
7. Face the ladder when climbing up or down it.
8. Maintain a three-point contact by keeping both hands and one foot or both feet and one hand on the ladder at all times when climbing up or down the ladder.
9. When performing work from a ladder, face the ladder and do not lean backward or sideways from the ladder.
10. Do not stand on tables, chairs, boxes or other improvised climbing devices to reach high places. Use the ladder or stepstool.
11. Do not stand on the top two rungs of any ladder.
12. Do not stand on a ladder that wobbles, or that leans to the left or right of center.
13. When using a straight or extension ladder, extend the top of the ladder at least 3 feet above the edge of the landing.
14. Secure the ladder in place by having another employee hold it if it cannot be tied to the structure.
15. Do not move a rolling ladder while someone is on it.
16. Do not place ladders on barrels, boxes, loose bricks, pails, concrete blocks, or other unstable bases.
17. Do not carry items in your hands while climbing up or down a ladder.
18. Do not try to "walk" a ladder by rocking it. Climb down the ladder, and then move it.
19. Do not use a ladder as a horizontal platform.

## **Lifting Procedures**

1. Plan the move before lifting; ensure that you have an unobstructed pathway.
2. Test the weight of the load before lifting by pushing the load along its resting surface.
3. If the load is too heavy or bulky, use lifting and carrying aids such as hand trucks, dollies, pallet jacks and carts, or get assistance from a co-worker.
4. If assistance is required to perform a lift, coordinate and communicate your movements with those of your co-worker.
5. Position your feet 6 to 12 inches apart with one foot slightly in front of the other.
6. Face the load.
7. Bend at the knees, not at the back.
8. Keep your back straight.
9. Get a firm grip on the object using your hands and fingers. Use handles when they are present.
10. Hold the object as close to your body as possible.
11. While keeping the weight of the load in your legs, stand to an erect position.
12. Perform lifting movements smoothly and gradually; do not jerk the load.
13. If you must change direction while lifting or carrying the load, pivot your feet and turn your entire body. Do not twist at the waist.
14. Set down objects in the same manner as you picked them up, except in reverse.
15. Do not lift an object from the floor to a level above your waist in one motion. Set the load down on a table or bench and then adjust your grip before lifting it higher.
16. Never lift anything if your hands are greasy or wet.
17. Wear protective gloves when lifting objects that have sharp corners or jagged edges.

## **Electric Powered Tools**

1. Do not use power equipment or tools on which you have not been trained.
2. Keep power cords away from the path of drills, saws, vacuum cleaners, floor polishers, mowers, slicers, knives, grinders, irons, and presses.
3. Do not carry plugged-in equipment or tools with your finger on the switch.
4. Do not carry equipment or tools by the cord.
5. Disconnect the tool from the outlet by pulling on the plug, not the cord.
6. Turn the tool off before plugging or unplugging it.
7. Do not leave tools that are "On" unattended.
8. Do not handle or operate electrical tools when your hands are wet or when you are standing on wet floors.

9. Do not operate spark inducing tools such as grinders, drills, or saws near containers labeled "Flammable" or in an explosive atmosphere such as a paint spray booth.
10. Turn off electrical tools and disconnect the power source from the outlet before attempting repairs or service work. Tag the tool "Out of Service."
11. Do not connect multiple electrical tools into a single outlet.
12. Do not run extension cords through doorways, through holes in ceilings, walls, or floors.
13. Do not drive over, drag, step on or place objects on a cord.
14. Do not operate a power hand tool or portable appliance with a two-pronged adapter or a two-conductor extension cord.
15. Do not use a power hand tool while wearing wet cotton gloves or wet leather gloves.
16. Never operate electrical equipment barefooted. Wear rubber-soled or insulated work boots.
17. Do not operate a power hand tool or portable appliance while holding a part of the metal casing or holding the extension cord in your hand. Hold all portable power tools by the plastic handgrips or other nonconductive areas designed for gripping purposes.
18. Do not operate a power hand tool or portable appliance that has a frayed, worn, cut, improperly spliced, or damaged power cord.
19. Do not operate a power hand tool or portable appliance if the ground pin from the three-pronged power plug is missing or has been removed.

## **Hand Tools**

1. Use tied-off containers to keep tools from falling off scaffolds and other elevated work platforms.
2. Keep the blades of all cutting tools sharp.
3. Carry all sharp tools in sheaths or holsters.
4. Tag worn, damaged, or defective tools "Out of Service" and do not use them.
5. Do not use a tool if its handle has splinters, burrs, cracks, splits or if the head of the tool is loose.
6. Do not use impact tools such as hammers, chisels, punches, or steel stakes that have mushroomed heads.
7. When handing a tool to another person, direct sharp points and cutting edges away from yourself and the other person.
8. Do not chop at heights above your head when working with a hand axe.
9. Do not carry sharp or pointed hand tools such as screwdrivers, scribes, aviation snips, scrapers, chisels or files in your pocket unless the tool or pocket is sheathed.
10. Do not perform "make-shift" repairs to tools.
11. Do not use "cheaters" on load binders or "boomers."
12. Do not carry tools in your hand when climbing. Carry tools in tool belts or hoist the tools to the work area with a hand line.

13. Do not throw tools from one location to another, from one employee to another, from scaffolds or other elevated platforms.

### **Chisels**

1. Keep the cutting edge of the chisel sharp.
2. Do not use chisels with damaged striking ferrules.
3. Hold a chisel with a tool holder if possible.
4. Clamp a small work piece in a vise and chip towards the stationary jaw when working with a chisel.

### **Clamps**

1. Do not use the C-clamp for hoisting materials.
2. Do not use the C-clamp as a permanent fastening device.

### **Files/Rasps**

1. Do not use a file as a pry bar, hammer, screwdriver, or chisel.
2. When using a file or a rasp, grasp the handle in one hand and the toe of the file in the other.
3. Do not hammer on a file.

### **Hammers**

1. Use a claw hammer for pulling nails and driving nails.
2. Do not strike nails or other objects with the cheek of the hammer.
3. Do not strike a hardened steel surface, such as a cold chisel, with a claw hammer.
4. Do not strike one hammer against another hammer.
5. Do not use a hammer if your hands are oily, greasy, or wet.
6. Do not use a hammer as a wedge, a pry bar or for pulling large spikes.
7. Use only a sledge-type hammer on a striking face wrench.

### **Knives/Sharp instruments**

1. When handling knife blades and other cutting tools, direct sharp points and edges away from you.
2. Store knives in knife blocks or in sheaths after use.
3. Do not use knives with dull blades.
4. Do not use honing steels that do not have disc guards.
5. Do not attempt to catch a falling knife.

6. Use knives for the operation for which they are named.
7. Do not use knives with broken or loose handles.
8. Do not use knives as screwdrivers, pry bars, can openers or ice picks.
9. Do not pick up knives by their blades.
10. Carry knives with their tips pointed towards the floor.

## **Pliers**

1. Do not attempt to force pliers by using a hammer on them.
2. Do not slip a pipe over the handles of pliers to increase leverage.
3. Use pliers with insulated handles for electrical work.
4. Do not use pliers that are cracked, broken, or sprung.
5. When using diagonal cutting pliers, shield the loose pieces of cut material from flying into the air by using a cloth or your gloved hand.

## **Saws**

1. Do not use an adjustable blade saw such as a hacksaw, coping saw, keyhole saw, or bow saw, if the blade is not taut.
2. Do not use a saw that has dull saw blades.
3. Keep hands and fingers away from the saw blade while using the saw.
4. Do not carry a saw by the blade.
5. When using a handsaw, hold the work piece firmly against the worktable.
6. Do not use woodworking equipment such as circular saws, radial saws, or jointers if they do not have guards on the saw blade.
7. Keep control of saws by decreasing downward pressure at the end of the stroke.
8. When operating scroll saws, stop the machine before removing scrap pieces from the table.
9. Clamp work when using a hole saw.

## **Screwdrivers**

1. Always match the size and type of screwdriver blade to fit the head of the screw.
2. Do not hold the work piece against your body while using a screwdriver.
3. Do not put your fingers near the blade of the screwdriver when tightening a screw.
4. Use an awl, drill or a nail to make a starting hole for screws.
5. Do not force a screwdriver by using a hammer or pliers on it.
6. Do not use a screwdriver as a punch, chisel, pry bar or nail puller.
7. Use a screwdriver that has an insulated handle for electrical work.

8. Do not use a screwdriver if your hands are wet, oily, or greasy.
9. Do not use a screwdriver to test the charge of a battery.
10. When using a spiral ratchet screwdriver, push down firmly and slowly.

### **Snips**

1. Wear safety glasses or safety goggles when using snips to cut materials.
2. Wear work gloves when cutting materials with snips.
3. Do not use straight cut snips to cut curves.
4. Keep the blade aligned by tightening the nut and bolt on the snips.
5. Do not use snips as a hammer, screwdriver, or pry bar.
6. Use the locking clip on the snips after use.

### **Vises**

1. When clamping a long work piece in a vise, support the far end of the work piece by using an adjustable pipe stand, sawhorse, or box.
2. Position the work piece in the vise so that the entire face of the jaw supports the work piece.
3. Do not use a vise that has worn or broken jaw inserts, or has cracks or fractures in the body of the vise.
4. Do not slip a pipe over the handle of a vise to gain extra leverage.

### **Personal Protective Equipment**

1. Do not paint or drill holes in hard hats.
2. Do not wear hard hats that are dented or cracked.
3. Wear safety glasses, goggles, or face shield when using chippers, grinders, lathes, or sanders.
4. Wear earplugs or earmuffs in areas posted "Hearing Protection Required."

### **Pneumatic Tools**

1. Do not point a compressed air hose at bystanders or use it to clean your clothing.
2. Do not use tools that have handles with burrs or cracks.
3. Do not use compressors if their belt guards are missing. Replace belt guards before use.
4. Turn the tool "off" and let it come to a complete stop before leaving it unattended.
5. Disconnect the tool from the airline before making any adjustments or repairs to the tool.
6. Engage positive locks on hoses and attachments before use.

7. Shut off pressure valve and disconnect airline when not in use.
8. Tag damaged or defective pneumatic tools "Out of Service" to prevent usage of the tool by other employees.

### **Powder Actuated Tools**

1. Only employer-authorized personnel, with a valid certification card may operate powder-actuated tools.
2. Wear safety glasses, goggles, or face shields when operating powder actuated tools.
3. Wear earplugs or earmuffs when making fastenings.
4. Do not permit bystanders in the area when using a powder-actuated tool.
5. Do not load tool until ready to make a fastening.
6. Keep tool pointed in a safe direction (away from personnel).
7. Post a sign alerting co-workers that a powder actuated tool is being used.
8. After use, lock powder actuated tools and powder loads in a container and store in a safe place such as a locker or the trunk of a car.

### **SCA**

1. Follow the manufacturer's instructions when erecting the scaffold.
2. Do not work on scaffolds outside during stormy or windy weather.
3. Do not climb on scaffolds that wobble or lean to one side.
4. Initially inspect scaffold prior to mounting. Do not use a scaffold if any pulley, block, hook, or fitting is visibly worn, cracked, rusted, or otherwise damaged. Do not use a scaffold if any rope is frayed, torn, or visibly damaged.
5. Do not use any scaffold tagged "Out of Service."
6. Do not use unstable objects such as barrels, boxes, loose brick or concrete blocks to support scaffolds or planks.
7. Do not use a scaffold unless guardrails and all flooring are in place.
8. Level the scaffold after each move. Do not extend adjusting leg screws more than 12 inches.
9. Do not walk or work beneath a scaffold unless a wire mesh has been installed between the mid-rail and the toe board or planking.
10. Use safety belts and lanyards when working from scaffolds that are higher than 10 feet and that do not have top and mid-guard rails.
11. Do not climb the cross braces for access to the scaffold. Use a ladder.
12. Do not jump from, to, or between scaffolding.
13. Do not slide down cables, ropes or guys used for bracing.

14. Keep both feet on the decking. Do not sit or climb on the guardrails.
15. Do not lean out from the scaffold. Do not rock the scaffold.
16. Keep the scaffold free of scraps, loose tools, tangled lines and other obstructions.
17. Do not throw anything "overboard" unless a spotter is available. Use debris chutes or lower things by hoist or by hand.
18. Do not move a mobile scaffold with anyone on the scaffold.
19. Lock and chock wheels on rolling scaffolds before using.

## **Stairways, Floors and Openings**

1. Do not work on open sided floors, elevated walkways or elevated platforms if there are no guardrails in place.
2. Stand clear of floor openings if guardrails or covers are removed or displaced.

## **Heavy Equipment Operators**

### **Site Safety**

1. Do not start work until barricades, barrier logs, fill or other protection have been installed to isolate the work area from local traffic.
2. Do not work outdoors during lightning storms.
3. Drink plenty of clear liquids during your breaks.
4. Take breaks in shaded areas.

### **Forklifts Pre-Use Inspection**

Do not use forklift if any of the following conditions exist:

1. The mast has broken or cracked weld-points.
2. The roller tracks are not greased or the chains are not free to travel.
3. Forks are unequally spaced or cracks exist along the blade or at the heels.
4. Hydraulic fluid levels are low.
5. Hydraulic line and fitting have excessive wear or are crimped.
6. Fluid is leaking from the lift or the tilt cylinders.
7. The hardware on the cylinders is loose.
8. Tires are excessively worn, split, or have missing tire material.
9. Air filled tires are not filled to the operating pressure indicated on the tire.
10. Batteries have cracks or holes, uncapped cells, frayed cables, broken cable insulation, loose connections, or clogged vent caps.

### **Starting the Forklift**

1. Apply the foot brake and shift gears to neutral before turning the key.

### **Picking Up a Load**

1. Square up on the center of the load and approach it straight on with the forks in the travel position.
2. Stop when the tips of your forks are about a foot from the load.
3. Level the forks and slowly drive forward until the load is resting against the backrest of the mast.
4. Lift the load high enough to clear whatever is under it.
5. Back up about one foot, and then slowly and evenly tilt the mast backwards to stabilize the load.

### **Putting a Load Down**

1. Square up and stop about one foot from desired location.
2. Level the forks and drive to the loading spot.
3. Slowly lower the load to the floor.
4. Tilt the forks slightly forward so that you do not hook the load.
5. When the path behind you is clear of obstructions, back straight out until the forks have cleared the pallet.

### **Stacking One Load on Top of Another**

1. Stop about one foot away from the loading area and lift the mast high enough to clear the top of the stack.
2. Slowly move forward until the load is squarely over the top of the stack.
3. Level the forks and lower the mast until the load is no longer supported by the forks.
4. Look over both shoulders for obstructions and back straight out if the path is clear.

### **Forklift Safety Rules**

1. Do not exceed the lift capacity of the forklift. Read the lift capacity plate on the forklift if you are unsure.
2. Follow the manufacturer's guidelines concerning changes in the lift capacity before adding attachments, such as wedges, to a forklift.
3. Lift the load an inch or two to test for stability: If the rear wheels are not in firm contact with the floor, take a lighter load or use a forklift with a higher lift capacity.
4. Do not raise or lower a load while you are en-route. Wait until you are in the loading area and have stopped before raising or lowering the load.
5. After picking up a load, adjust the forks so that the load is tilted slightly backward for added stability.

6. Drive with the load at a ground clearance height of 4-6 inches at the tips and 2 inches at the heels in order to clear most uneven surfaces and debris.
7. Drive at a walking pace and apply brakes slowly to stop when driving on slippery surfaces such as icy or wet floors.
8. Approach angle railroad tracks at a 45
9. Do not drive over objects in your pathway.
10. Do not drive into an area with a ceiling height that is lower than the height of the mast or overhead guard.
11. Steer wide when making turns.
12. Do not drive up to anyone standing or working in front of a fixed object such as a wall.
13. Do not drive along the edge of an unguarded elevated surface such as a loading dock or staging platform.
14. Obey all traffic rules and signs.
15. Sound horn when approaching blind corners, doorways, or aisles to alert other operators and pedestrians.
16. Do not exceed a safe working speed of five miles per hour. Slowdown in congested areas.
17. Stay a minimum distance of three truck lengths from other operating mobile equipment.
18. Drive in reverse and use a signal person when your vision is blocked by the load.
19. Look in the direction that you are driving; proceed when you have a clear path.
20. Do not use bare forks as a man-lift platform.
21. Do not drive the forklift while people are on the attached man-lift platform.
22. Drive loaded forklifts forward up ramps.
23. Raise the forks an additional two inches to avoid hitting or scraping the ramp surface as you approach the ramp.
24. Drive loaded forklifts in reverse when driving down a ramp.
25. Drive unloaded forklifts in reverse going up a ramp and forward going down a ramp.
26. Do not attempt to turn around on a ramp.
27. Do not use "Reverse" to brake.
28. Lower the mast completely, turn off the engine, and set the parking brake before leaving your forklift.

### **Power Hoist Safety**

1. Use manufacturer approved counter weights to secure the hoist. Do not use roofing materials such as rolls of felt or bundles of shingles,
2. Do not exceed the manufacturer's recommended load capacity limits.
3. Only trained personnel, approved by the employer, are allowed to operate a power hoist.

4. Use the power hoist in an area that permits the operator to stand clear of the load at all times.
5. Use safety hooks or shackles to attach the load whenever possible.
6. Use 'tag lines' to control the load when necessary.
7. Keep your fingers and clothing clear of hoist machinery.
8. Do not attempt adjustments while the hoist is running.

### **Portable Welding Equipment**

1. Wear a welding helmet or welding goggles during welding operations.
2. Do not use personal or employee-owned power tools and portable appliance while at work.
3. Do not perform welding tasks while wearing wet cotton gloves or wet leather gloves.
4. Insulated work gloves are required for all welders when using welding equipment.
5. Do not use welding apparatus if power plug is cut, frayed, split or otherwise visibly damaged or modified.
6. When replacing power plugs and cords of welding apparatus, always check to ensure that the ground wire is connected and the power plug prongs are not worn off, allowing the plug to be inserted backward.

### **Compressed Gas Cylinders**

#### **Storage and Handling**

1. Do not handle oxygen cylinders if your gloves are greasy or oily.
2. Store all cylinders in the upright position.
3. Place valve protection caps on gas cylinders that are in storage or not in use.
4. Do not lift cylinders by the valve protection cap.
5. Do not store compressed gas cylinders in areas where they can come in contact with chemicals labeled "Corrosive."
6. Place cylinders on a cradle, sling board, pallet or cylinder basket to hoist them.
7. Do not place cylinders against electrical panels or live electrical cords where the cylinder can become part of the circuit.
8. Do not use a flame to check for propane cylinder leak, use a leak or monitor detector.
9. Use of Cylinders
10. Do not use dented, cracked, or other visually damaged cylinders.
11. Use only an open ended or adjustable wrench when connecting or disconnecting regulators and fittings.
12. Do not transport cylinders without first removing regulators and replacing the valve protection caps.

13. Close the cylinder valve when work is finished, when the cylinder is empty or at any time, the cylinder is moved.
14. Do not store oxygen cylinders near fuel gas cylinders such as propane or acetylene or near combustible material such as oil or grease.
15. Stand to the side of the regulator when opening the valve.
16. If a cylinder is leaking around a valve or a fuse plug, move it to an outside area away from where work is performed and tag it to indicate the defect.
17. Do not hoist or transport cylinders by means of magnets or choker slings.
18. Do not use compressed gas to clean the work area, equipment, or yourself.
19. Do not remove the valve wrench from acetylene cylinders while the cylinder is in use.
20. Open compressed gas cylinder valves slowly. Open fully when in use to eliminate possible leakage around the cylinder valve stem.
21. Purge oxygen valves, regulators, and lines before use.

### **Torch on Applications**

1. "Blow Out" hoses before attaching the torch.
2. Inspect hoses and torches before use. Replace damaged, burned, worn, or leaking parts.
3. Use a pressure gauge on every regulator. Do not use an adjustable regulator with a higher-pressure range than the original regulator that came with the torch.
4. Never face the gauge while opening the cylinder valve.
5. Before lighting a torch, purge the hose, adjust the working pressures, then use a friction lighter to ignite the gases. Do not use matches or a cigarette lighter.
6. Do not use oil, grease or other lubricants on the regulator.
7. When shutting off the torch, close the gas cylinder valve first and let the remaining gas burn out of the hose before closing off the torch valve.
8. Never overfill a gas cylinder. It could explode.
9. Use only hoses listed for liquid petroleum (LP) gas.
10. Use soap solution to test for gas leaks before lighting.
11. Visually check and ensure that the flow of gas through the regulator is flowing in the proper direction. Directional flow is stamped on the regulator.
12. To keep 'frosting' from occurring, increase the size of the bottle or cylinder.
13. Secure propane tanks in an upright position and place them at least 10 feet from the open flame.
14. Keep non-applicators at least 10 feet from the flame.
15. Keep vent in pressure regulator clear at all times.
16. When shutting off the torch, close the propane cylinder valve first and let the remaining gas burn out of the hose.

17. Do not leave a lighted torch unattended.
18. Do not heat a cylinder to increase pressure.
19. Place a fire extinguisher near you, but away from the torch and other parts of LP gas equipment, when performing torch on operations.
20. Do not lay an operating torch over the edge of a roof.
21. Do not use a trowel as a torch stand.
22. Do not lay an operating torch to rest on a gas cylinder. If there is a gas leak in the cylinder area, there could be a fire.

### **Vehicle Loading**

1. Plan the move before loading; ensure that you have an unobstructed pathway and that the vehicle is parked as close to the equipment or material as possible.
2. Keep bumpers/tailgates free of grease, water, etc.; remove buildup of material such as dirt, mud, etc.
3. Use lifting aids such as dollies, pallet jack, and forklift or get assistance from a co-worker to place dock plate resting between loading dock and truck surface.
4. If equipment or material that is to be loaded into truck is too heavy or bulky, use lifting aids such as hand trucks, dollies, pallet jacks and carts, or get assistance from co-workers.
5. Secure all equipment and material within the truck to eliminate or reduce movement.

## Emergency Action Plan

### Fire Alarms

All employees and visitors are required to evacuate the building or site in the event of a fire alarm, regardless of cause or time.

1. For reasons of muster, "The Joint Venture" shall, before any work is initiated, identify specific **muster area** for each contractor, trade or manageable group.
2. Muster areas shall be  $\geq 50'$  from the building.
3. **The Muster Area for this project will be outside the Construction Manager Trailers unless otherwise directed by the Construction Manager**
  - It is the responsibility of the individual group, (by contractor, trade etc.), to determine whether or not all of their personnel evacuated the building, and if not, to report the names of the missing (or unaccounted person(s)) to the fire department incident commander, the local police/security department, and the project superintendent.

### Fire

In the event of an actual fire or smoke condition, the previously identified (through training) procedures shall be followed: Notify all persons in the immediate area of the fire to initiate evacuation.

- **Close** the door to the fire area/room to contain the fire and/or smoke condition after everyone has left area.
- **Activate Alarm** (fire alarm, horn or other suitable warning device) to initiate building evacuation.
- **Evacuate the building**
- **Phone Police** (911)

### Medical Emergency

Emergencies (which include significant lacerations, amputations, head, neck or back injuries, loss of consciousness, allergic reactions, diabetic emergencies, seizures, difficulty breathing, stroke and unknown illness or injuries) shall require the response of an ambulance. 911 or the local emergency number;

Unless required for reasons of personal safety (such as explosion, fire, structural failure etc.), no person needing emergency first aid shall be relocated, as this may compromise their health, safety and well-being.

- A designated person shall be identified to meet the ambulance at a pre-determined location, and direct the ambulance crew into the area or building where the incident has occurred.

## **First-Aid**

Every work site shall have access to at least one first-aid kit in a weatherproof container. The first-aid kit will be inspected regularly to ensure that it is well stocked, in sanitary condition, and any used items are promptly replaced. The contents of the first-aid kit shall be arranged to be quickly found and remain sanitary. First-aid dressings shall be sterile and in individually sealed packages.

Drugs, antiseptics, eye irrigation solutions, inhalants, medicines, or proprietary preparations shall not be included in first-aid kits unless specifically approved, in writing, by an employer-authorized, licensed physician. Other supplies and equipment, if provided, shall be in accordance with the documented recommendations of an employer-authorized licensed physician upon consideration of the extent and type of emergency care to be given based upon the anticipated incidence and nature of injuries and illnesses and availability of transportation to medical care.

Each project will have a Blood-Borne Pathogens Kit for the safe cleaning of surfaces contaminated by blood or other bodily fluids.

Proper equipment for the prompt transportation of the injured or ill person to a physician or hospital where emergency care is provided, or an effective communication system for contacting hospitals or other emergency medical facilities, physicians, ambulance and fire services, shall also be provided. The telephone numbers of the following emergency services in the area shall be posted near the job telephone, or otherwise made available to the employees where no job site telephone exists:

1. A company authorized physician or medical clinic, and at least one alternate if available.
2. Hospitals.
3. Ambulance services
4. Fire-protection services.

Prior to the commencement of work at any site, the Supervisor or Manager shall locate the nearest preferred medical facility and establish that transportation or communication methods are available in the event of an employee injury.

Each employee shall be informed of the procedures to follow in case of injury or illness through our new employee orientation program, Code of Safe Practices, and safety meetings. Where the eyes or body of any person may be exposed to injurious or corrosive materials, suitable facilities for drenching the body or flushing the eyes with clean water shall be conspicuously and readily accessible.

## **Area Hospitals:**

### **U-Mass Memorial**

26 Queen Street

Worcester, Ma 01603

855-862-7763

### **Saint Vincent**

123 Summer Street

## Voluntary Respirator Use

Voluntary respirator use by workers is permitted as long as the equipment is proper for the intended use, NIOSH Approved, and has been inspected and the worker signs a Voluntary Respirator Use Waiver.

Appendix D to Sec. 1910.134 (Mandatory) Information for Employees Using Respirators When Not Required Under the Standard

### VOLUNTARY RESPIRATOR USE FORM

I, \_\_\_\_\_, am requesting to use the

following dust/mist respirator (\_\_\_\_\_)

for the following tasks (\_\_\_\_\_).

I understand the hazard to myself is minimal, and I should be able to complete the task without a respirator, if necessary. I am not aware of any current health conditions or family history involving heart/lung disease or breathing disorders that may be affected by the wearing of a disposal respirator. Should I develop any health conditions, I will immediately stop work, notify my immediate supervisor and consult with a medical professional for further evaluation.

I have read 29CFR1910.134 (1998) (Appendix D) (below).

Questions on respirator use can be answered by my supervisor or the Safety Director.

\_\_\_\_\_ (Respirator User) \_\_\_\_\_ (Date)

\_\_\_\_\_ (Immediate Supervisor) \_\_\_\_\_ (Date)

## **Appendix D to Sec. 1910.134 (Mandatory) Information for Employees Using Respirators When Not Required Under the Standard**

Respirators are an effective method of protection against designated hazards when properly selected and worn. Respirator use is encouraged, even when exposures are below the exposure limit, to provide an additional level of comfort and protection for workers. However, if a respirator is used improperly or not kept clean, the respirator itself can become a hazard to the worker. Sometimes, workers may wear respirators to avoid exposures to hazards, even if the amount of hazardous substance does not exceed the limits set by OSHA standards. If your employer provides respirators for your voluntary use, or if you provide your own respirator, you need to take certain precautions to be sure that the respirator itself does not present a hazard.

You should do the following:

1. Read and heed all instructions provided by the manufacturer on use, maintenance, cleaning and care, and warnings regarding the respirators limitations.
2. Choose respirators certified for use to protect against the contaminant of concern. NIOSH, the National Institute for Occupational Safety and Health of the U.S. Department of Health and Human Services, certifies respirators. A label or statement of certification should appear on the respirator or respirator packaging. It will tell you what the respirator is designed for and how much it will protect you.
3. Do not wear your respirator into atmospheres containing contaminants for which your respirator is not designed to protect against. For example, a respirator designed to filter dust particles will not protect you against gases, vapors, or very small solid particles of fumes or smoke.
4. Keep track of your respirator so that you do not mistakenly use someone else's respirator. [63 FR 1152, Jan. 8, 1998; 63 FR 20098, April 23, 1998]

## Means of Egress

All means of egress within the area or building shall be properly maintained for health and safety reasons.

- Personnel must be able to enter and exit the area, building or facility without hazard.
- All corridors and other walk / work surfaces shall be free of accumulated dust(s) and waste.
- Boxes, cardboard and other combustible material shall be kept to a minimum to reduce the risk of fire.
- Cords and other potential trip hazards shall be run along the base of the wall or overhead.
  - Cords run overhead shall not be run above ceilings, ceiling grids or through walls.
  - Cords run overhead should be hung by non-metallic means such as rope, string or tape.
- Corridors shall not be used for the storage or placement of gases.
  - Combustible storage should be placed in a separate area or room, in case of fire.
  - Equipment should be properly stored to prevent trip and fall, and for ease of retrieval.
- Flammable Gas and Liquid storage shall be kept to a minimum, and shall be stored in a manner acceptable to the owner and the local fire department.
  - Flammable gases and liquids shall not be placed or otherwise stored in a “means of egress”, such as a corridor or exit.
  - Flammable and combustible liquids shall be placed in approved metal (self-closing) cans and Flammable Storage Cabinets.
- All floors, unless otherwise permitted by the Building Official, shall have (2) separate and distinct means of egress.
  - If a stairwell must be removed, or temporarily made inaccessible, it shall be the responsibility of “The Joint Venture” to create another means of emergency egress, which could include, but is not limited to;
- Ladders to lower floor or ground
- Access to scaffold/staging
  - Whenever an Exit is temporarily closed or relocated, “The Joint Venture” shall make the following site modifications;
    - Cover or remove any reference to the existing signage
    - Post exit signage at the new location and
    - Direct employees and visitors to the new or temporary exit, as required

All means of egress must be properly identified, as required by the building official and OSHA. At a minimum the EXIT sign must be;

- Green or Red in color
- At least 2' above the floor
- Easily recognizable
- All **EXIT** signs that no longer serve an actual exit, must...

- be covered to prevent confusion, and
- shall have alternative exit signage (with arrows) in place to re-direct occupants to the new exit.
- Lighting is the responsibility of “The Joint Venture”, or their identified designee. Adequate illumination must be maintained at all times for reasons of safety.
- Emergency lighting is required in areas where work may be necessary at night, or in locations below grade, in cases of power failure
- All temporary lighting must have the appropriate guards, as required
- The wattage of the light bulbs shall not exceed the manufacturers specifications for the light fixture

## ENVIRONMENTAL

### Hazardous Materials

- “The Joint Venture” shall make the owner or the owner’s designee/representative aware of any hazardous materials found on site that were not previously addressed or identified at the beginning of the project.
- “The Joint Venture” shall notify the owner or the owner’s designee/representative about any hazardous material incidents on site, regardless of size or quantity.
  - Leaks, spills or other types of contamination to air, soil or water which include chemicals, gasoline, hydraulic fluids and oils must be reported immediately
    - If the leak or spill is a “reportable quantity” of a chemical, gas or oil greater than 10 gallons (may be less depending on material), spilled directly to water regardless of quantity, or spilled to a direct pathway to water (i.e. storm drain), the owner or the owner's designee / representative must be notified, the local fire department and/or the Massachusetts Department of Environmental Protection shall be notified.
  - Hazardous materials shall be contained and labeled in a manner acceptable to the authority having jurisdiction.
  - Hazardous materials shall be properly labeled, as referenced in the Hazard Communications section of this program.

Hazardous materials including chemicals, cleaning agents, including those used for power washing of buildings and oil shall not be discharged or disposed of; to driveway, ground, road, sewer, storm drain or trash / waste receptacle or any other non-approved manner.

- The facility (owner) shall identify, with appropriate environmental assistance, the most appropriate manner in which to properly discard the hazardous material or waste, in accordance with the requirements of the state and federal environmental protection requirements.
  - For additional information and regulatory requirements, see the following sections;
    - Hazardous Waste

- Solid Waste and Recycling
- Storm Water
- Universal Waste

## **Hazardous Waste**

Each contractor and sub-contractor is ultimately responsible for the identification, disposal and record keeping requirements of hazardous waste generated from the site and processes, such as lead based paint, asbestos, contaminated materials, and chemicals present at the facility. Contractors and sub-contractors are responsible for any waste they create on the site that is unrelated to the owner, including but not limited to; cutting oil, and concrete cleaners, cleaning compounds, solvents etc..

## **Storm Water**

- As part of this requirement, this project shall have a storm water pollution protection plan (SWPPP) to limit the discharge of construction materials, waste, including chemicals, cleaning materials, mud and sand into a storm drain and other "navigable" waterways.
  - The SWPPP, because it applies to ground water and water run-off must take into consideration all potential wastes leaving the construction site.
    - Acid or power washing of buildings must be controlled in a manner acceptable to the DEP / EPA
    - Areas for the washing of vehicles and concrete equipment must be controlled.
    - Oil must be stored in a manner to prevent the release in the case of a spill. "The Joint Venture" must check with the Owner to determine if SPCC regulations apply. If so, "The Joint Venture" must supply a list of all oil being stored in 55 gallons or larger to the owner, and must abide by the SWPPP.
- The responsible contractor shall control run-off with appropriate measures that may include, but are not limited to;
  - Catch basin filters
  - Soil retaining measures
  - Street sweeping (frequent)
- "The Joint Venture", the sub-contractor (if applicable) and the Owner shall meet and discuss all options available to decide on the best management practices for the control of run-off.

## HEALTH

### General Health and Sanitation

- Housekeeping practices are reflective of the site health and sanitation program
- Contractors and sub-contractors shall be responsible for providing their workers with adequate potable water and disposable cups for the purpose of employee hydration.
- "The Joint Venture" shall provide the appropriate sanitary restroom facilities, unless otherwise negotiated with the owner.
- All restroom facilities shall have, as a minimum alcohol-based hand cleaners and disposable toilet paper.

### HAZARD COMMUNICATION (GHS) SAFETY PLAN

**DEFINITIONS:** For purposes of HAZARD COMMUNICATION (GHS) SAFETY PLAN, the following will apply:

1. **"Article"** means a manufactured item other than a fluid or particle that is formed to a specific shape or design during manufacture, and has use function(s) dependent in whole or in part upon its shape or design during end use; and under normal conditions of use does not release more than very small quantities, e.g., minute or trace amounts of a Hazard chemical and does not pose a physical hazard or health risk to employees.
2. **"Assistant Secretary"** means the Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, or designee.
3. **"Chemical"** means any substance, or mixture of substances.
4. **"Chemical Manufacturer"** means a manufacturer with a workplace where chemical(s) are produced for use or distribution.
5. **"Chemical Name"** means the scientific designation of a chemical in accordance with the nomenclature system developed by the International Union of Pure and Applied Chemistry (IUPAC) or the Chemical Abstracts Service (CAS) rules of nomenclature, or a name that will clearly identify the chemical for the purpose of conducting a hazard classification.
6. **"Classification"** means to identify the relevant data regarding the hazards of a chemical; review those data to ascertain the hazards associated with the chemical; and decide whether the chemical will be classified as Hazard according to the definition of a Hazard chemical. In addition, classification for health and physical hazards includes the determination of the degree of hazard by comparing the data with the criteria for health and physical hazards.
7. **"Commercial Account"** means an arrangement where a retail distributor sells Hazard chemicals to a company, generally in large quantities over time and/or at costs that are below the regular retail price.

8. **"Common Name"** means any designation or identification such as code name, code number, trade name, brand name or generic name used to identify a chemical other than by its chemical name.
9. **"Container"** means any bag, barrel, bottle, box, can, cylinder, drum, reaction vessel, storage tank, or the like that contains a Hazard chemical. Pipes or piping systems, and engines, fuel tanks, or other operating systems in a vehicle, are not considered to be containers.
10. **"Designated Representative"** means any individual or organization that our employee gives written authorization to exercise such employee's rights. A recognized or certified collective bargaining agent will be treated automatically as a designated representative without regard to written employee authorization.
11. **"Director"** means the Director, National Institute for Occupational Safety and Health, U.S. Department of Health and Human Services, or designee.
12. **"Distributor"** means a business, other than a chemical manufacturer or importer that supplies Hazard chemicals to other distributors or to employers.
13. **"Employee"** means employee who may be exposed to Hazard chemicals under normal operating conditions or in foreseeable emergencies. Employees who encounter Hazard chemicals only in non-routine, isolated instances are not covered.
14. **"Employer"** means a person engaged in a business where chemicals are either used, distributed, or are produced for use or distribution, including a contractor or subcontractor.
15. **"Exposure or Exposed"** means that an employee is subjected in the course of employment to a chemical that is a physical or health hazard, and includes potential (e.g. accidental or possible) exposure. "Subjected" in terms of health hazards includes any route of entry (e.g. inhalation, ingestion, skin contact or absorption.)
16. **"Foreseeable Emergency"** means any potential occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment that could result in an uncontrolled release of a Hazard chemical into the workplace.
17. **"Hazard Category"** means the division of criteria within each hazard class, e.g., oral acute toxicity and flammable liquids include four hazard categories. These categories compare hazard severity within a hazard class and should not be taken as a comparison of hazard categories more generally.
18. **"Hazard Class"** means the nature of the physical or health hazards, e.g., flammable solid, carcinogen, oral acute toxicity.
19. **"Hazard Not Otherwise Classified (HNOC)"** means an adverse physical or health effect identified through evaluation of scientific evidence during the classification process that does not meet the specified criteria for the physical and health hazard classes addressed in this section. This does not extend coverage to adverse physical and health effects for that there is a hazard class

but the effect either falls below the cut-off value/concentration limit of the hazard class or is under a GHS hazard category that has not been adopted by OSHA.

20. **"Hazard Statement"** means a statement assigned to a hazard class and category that describes the nature of the hazard(s) of a chemical, including the degree of the hazard.
21. **"Hazard Chemical"** means any chemical that is classified as a physical hazard or a health hazard, a simple combustible dust, pyrophoric gas, or hazard not otherwise classified.
22. **"Hazard Classification"** means chemical manufacturers and importers will evaluate chemicals produced in their workplaces or imported by them to classify the chemicals in accordance with this section. For each chemical, the chemical manufacturer or importer will determine the hazard classes, and where appropriate, the category of each class that apply to the chemical being classified. The company is not required to classify chemicals unless they choose not to rely on the classification performed by the chemical manufacturer or importer for the chemical to satisfy this requirement.
23. **"Health Hazard"** means a chemical that is classified as posing one of the following Hazard effects: acute toxicity (any route of exposure); skin corrosion or irritation; serious eye damage or eye irritation; respiratory or skin sensitization; germ cell mutagenicity; carcinogenicity; reproductive toxicity; specific target organ toxicity (single or repeated exposure); or aspiration hazard.
24. **"Immediate Use"** means that the Hazard chemical will be under the control of and used only by the person who transfers it from a labeled container and only within the work shift where it is transferred.
25. **"Importer"** means the first business with employees within the Customs Territory of the United States that receives Hazard chemicals produced in other countries for the purpose of supplying them to distributors or other employers within the United States.
26. **"Label"** means an appropriate group of written, printed or graphic information elements concerning a Hazard chemical that is affixed to, printed on, or attached to the immediate container of a Hazard chemical, or to the outside packaging.
27. **"Label Elements"** means the specified pictogram, hazard statement, signal word and precautionary statement for each hazard class and category.
28. **"Mixture"** means a combination or a solution composed of two or more substances in that they do not react.
29. **"Physical Hazard"** means a chemical that is classified as posing one of the following Hazard effects: explosive; flammable (gases, aerosols, liquids, or solids); oxidizer (liquid, solid or gas); self-reactive; pyrophoric (liquid or solid); self-heating; organic peroxide; corrosive to metal; gas under pressure; or in contact with water emits flammable gas.
30. **"Pictogram"** means a composition that may include a symbol plus other

graphic elements, such as a border, background pattern, or color, that is intended to convey specific information about the hazards of a chemical. Eight pictograms are designated under this standard for application to a hazard category.

31. **"Precautionary Statement"** means a phrase that describes recommended measures that should be taken to minimize or prevent adverse effects resulting from exposure to a Hazard chemical or improper storage or handling.
32. **"Product Identifier"** means the name or number used for a Hazard chemical on a label or in the SDS. It provides a unique means so that the user can identify the chemical. The product identifier used will permit cross-references to be made among the list of Hazard chemicals required in the written hazard communication program, the label and the SDS.
33. **"Produce"** means to manufacture, process, formulate, blend, extract, generate, emit, or repackage.
34. **"Pyrophoric Gas"** means a chemical in a gaseous state that will ignite spontaneously in air at a temperature of 130 degrees F (54.4 degrees C) or below.
35. **"Responsible Party"** means someone who can provide additional information on the Hazard chemical and appropriate emergency procedures, if necessary.
36. **"Safety Data Sheet (SDS)"** means written or printed material concerning a Hazard chemical that is prepared in accordance with the Hazard Communication regulations.
37. **"Signal Word"** means a word used to indicate the relative level of severity of hazard and alert the reader to a potential hazard on the label. The signal words used in this section are "danger" and "warning." "Danger" is used for the more severe hazards, while "warning" is used for the less severe.
38. **"Simple Asphyxiate"** means a substance or mixture that displaces oxygen in the ambient atmosphere, and can thus cause oxygen deprivation in those who are exposed, leading to unconsciousness and death.
39. **"Specific Chemical Identity"** means the chemical name, Chemical Abstracts Service (CAS) Registry Number, or any other information that reveals the precise chemical designation of the substance.
40. **"Substance"** means chemical elements and their compounds in the natural state or obtained by any production process, including any additive necessary to preserve the stability of the product and any impurities deriving from the process used, but excluding any solvent that may be separated without affecting the stability of the substance or changing its composition.
41. **"Trade Secret"** means any confidential formula, pattern, process, device, information or compilation of information that is used in business, and that gives the business an opportunity to obtain an advantage over competitors who do not know or use it.

42. **"Use"** means to package, handle, react, emit, extract, generate as a byproduct, or transfer.
43. **"Work Area"** means a room or defined space in a workplace where Hazard chemicals are produced or used, and where employees are present.
44. **"Workplace"** means an establishment, job site, or project, at one geographical location containing one or more work areas.
1. **Hazard Classification:** Chemical manufacturers and importers are required to determine the hazards of the chemicals they produce or import. Hazard classification under the new, updated standard provides specific criteria to address health and physical hazards as well as classification of chemical mixtures.
2. **Labels:** Chemical manufacturers and importers must provide a label that requires the use of a safety data sheet format and provides detailed information regarding the chemical. This includes a signal word, pictogram, hazard statement, and precautionary statement for each hazard class and category.
3. **Safety Data Sheets:** The new format requires **16 specific sections** that will provide consistency in presentation of important protection information.
4. **Information and Training:** To facilitate understanding of the new system, the new standard requires that employees be trained on the new label elements and safety data sheet format, in addition to the current training requirements.

## Labeling Requirements

1. Chemical manufacturers and importers must provide a label that requires the use of a safety data sheet format and provides detailed information regarding the chemical. This includes a signal word, pictogram, hazard statement, and precautionary statement for each hazard class, category and mixed chemicals.
2. The HCS now requires the following label elements on labels of Hazard chemicals:
- a. **Name, Address and Telephone Number** of the chemical manufacturer, importer or other responsible party.
  - b. **Product Identifier** is how the Hazard chemical is identified. This can be (but is not limited to) the chemical name, code number or batch number. The manufacturer, importer or distributor can decide the appropriate product identifier. The same product identifier must be both on the label and in section 1 of the SDS.
  - c. **Signal Words** are used to indicate the relative level of severity of the hazard and alert the reader to a potential hazard on the label. There are only two

words used as signal words, “Danger” and “Warning.” Within a specific hazard class, “Danger” is used for the more severe hazards and “Warning” is used for the less severe hazards. There will only be one signal word on the label no matter how many hazards a chemical may have. If one of the hazards warrants a “Danger” signal word and another warrants the signal word “Warning,” then only “Danger” should appear on the label.

- d. **Hazard Statements** describe the nature of the hazard(s) of a chemical, including where appropriate, the degree of hazard. For example: “Causes damage to kidneys through prolonged or repeated exposure when absorbed through the skin.” All of the applicable hazard statements must appear on the label. Hazard statements may be combined where appropriate to reduce redundancies and improve readability. The hazard statements are specific to the hazard classification categories, and chemical users should always see the same statement for the same hazards no matter what the chemical is or who produces it.
  - e. **Precautionary Statements** describe recommended measures that should be taken to minimize or prevent adverse effects resulting from exposure to the Hazard chemical or improper storage or handling. There are four types of precautionary statements: prevention (to minimize exposure); response (in case of accidental spillage or exposure emergency response, and first-aid); storage; and disposal. For example, a chemical presenting a specific target organ toxicity (repeated exposure) hazard would include the following on the label: “Do not breathe dust, fumes, gas, mist, vapors, and/or spray.”
3. **Precautionary Statements** may be combined on the label to save on space and improve readability. When a chemical is classified for a number of hazards and the precautionary statements are similar, the most stringent statements must be included on the label. In this case, the chemical manufacturer, importer, or distributor may impose an order of precedence where phrases concerning response require rapid action to ensure the health and safety of the exposed person. In the self-reactive hazard category.
  4. To develop labels under the revised HCS regulations, the manufacturers, importers and distributors must first identify and classify the chemical hazard(s) by including **Pictogram(s)** on the label. After classifying the Hazard chemicals, the manufacturer, importer or distributor then determines the appropriate pictogram(s) signal words, and hazard and precautionary statement(s), for the chemical label. Once this information has been identified and gathered, then a label may be created. In most cases, the precautionary statements are independent; however, OSHA does allow flexibility for applying precautionary statements to the label, such as combining statements, using an order of precedence or eliminating an inappropriate statement.
  5. The label producer may provide supplementary Information and additional instructions or information that it deems helpful. It may also list any hazards not otherwise classified under this portion of the label. This section must also identify

the percentage of ingredient(s) of unknown acute toxicity when it is present in a concentration of  $\geq 1\%$  (and the classification is not based on testing the mixture as a whole). If the company decides to include additional information regarding the chemical that is above and beyond what the standard requires, it may list this information under what is considered "supplementary information." There is also no required format for how a workplace label must look and no particular format the company has to use; however, it cannot contradict or detract from the required information.

6. An example of an item that may be considered supplementary is the personal protective equipment (PPE) pictogram indicating what workers handling the chemical may need to wear to protect them. For example, the **Hazard Materials Information System (HMIS)** pictogram of a person wearing goggles may be listed. Other supplementary information may include directions of use, expiration date, or fill date, all of that may provide additional information specific to the process in that the chemical is used.
7. Pictograms are graphic symbols used to communicate specific information about the hazards of a chemical. On Hazard chemicals being shipped or transported from a manufacturer, importer or distributor, the required pictograms consist of a red square frame set at a point with a black hazard symbol on a white background, sufficiently wide to be clearly visible. A square red frame set at a point without a hazard symbol is not a pictogram and is not permitted on the label. The pictograms OSHA has adopted improve worker safety and health, conform to the GHS, and are used worldwide. While the GHS uses a total of nine pictograms, OSHA will only enforce the use of eight. The environmental pictogram is not mandatory but may be used to provide additional information. Employees may see the ninth symbol on a label because label preparers may choose to add the environment pictogram as supplementary information.
8. It is important to note that the OSHA pictograms do not replace the diamond shaped labels that the U.S. Department of Transportation (DOT) requires for the transport of chemicals, including chemical drums, chemical totes, tanks or other containers. Those labels must be on the external part of a shipped container and must meet the DOT requirements set forth in 49 CFR 172. While the DOT diamond label is required for all Hazard chemicals on the outside shipping containers, chemicals in smaller containers inside the larger shipped container do not require the DOT diamond but do require the OSHA pictograms.
9. The company is responsible for maintaining the labels on the containers, including, tanks, totes, and drums. This means that labels must be maintained on chemicals in a manner that continues to be legible and the pertinent information does not get defaced (i.e., fade, get washed off) or removed in any way.

## **Respirable Crystalline Silica Program**

### **PURPOSE**

This Respirable Crystalline Silica Program was developed to prevent employee exposure to hazardous levels of Respirable Crystalline Silica that could result through construction activities or nearby construction activities occurring on worksites. Respirable Crystalline Silica exposure at hazardous levels can lead to lung cancer, silicosis, chronic obstructive pulmonary disease, and kidney disease. It is intended to meet the requirements of the Respirable Crystalline Silica Construction Standard (29 CFR 1926.1153) established by the Occupational Safety and Health Administration (OSHA).

All work involving chipping, cutting, drilling, grinding, or similar activities on materials containing Crystalline Silica can lead to the release of respirable-sized particles of Crystalline Silica (i.e. Respirable Crystalline Silica). Crystalline Silica is a basic component of soil, sand, granite and many other minerals. Quartz is the most common form of Crystalline Silica. Many materials found on construction sites include Crystalline Silica; including but not limited to – cement, concrete, asphalt, pre-formed structures (inlets, pipe, etc.) and others. Consequently, this program has been developed to address and control these potential exposures to prevent our employees from experiencing the effects of occupational illnesses related to Respirable Crystalline Silica exposure.

### **SCOPE**

This Respirable Crystalline Silica Program applies to all employees who have the potential to be exposed to Respirable Crystalline Silica when covered by the OSHA Standard. The OSHA Respirable Crystalline Silica Construction Standard applies to all occupational exposures to Respirable Crystalline Silica in construction work, except where employee exposure will remain below 25 micrograms of Respirable Crystalline Silica per cubic meter of air ( $25 \mu\text{g}/\text{m}^3$ ) as an 8-hour time-weighted average (TWA) under any foreseeable conditions.

### **RESPONSIBILITIES**

“The Joint Venture” firmly believes protecting the health and safety of our employees is everyone’s responsibility. This responsibility begins with upper management providing the necessary support to properly implement this program. However, all levels of the organization assume some level of responsibility for this program including the following positions.

## Safety Department

- Conduct job site assessments for Silica containing materials and perform employee Respirable Crystalline Silica hazard assessments in order to determine if an employee's exposure will be above  $25 \mu\text{g}/\text{m}^3$  as an 8-hour TWA under any foreseeable conditions.
- Select and implement into the project's ECP the appropriate control measures in accordance with the Construction Tasks identified in OSHA's Construction Standard Table 1; and potentially including (but not limited to) - a written Exposure Control Plan (ECP), exposure monitoring, Hazard Communication training, medical surveillance, housekeeping and others.

NOTE: OSHA's Construction Standard Table 1 is a list of 18 common construction tasks along with acceptable exposure control methods and work practices that limit exposure for those tasks.

- Ensure that the materials, tools, equipment, personal protective equipment (PPE), and other resources (such as worker training) required to fully implement and maintain this Respirable Crystalline Silica Program are in place and readily available if needed.
- Ensure that Project Managers, Site Managers, Competent Persons, and employees are educated in the hazards of Silica exposure and trained to work safely with Silica in accordance with OSHA's Respirable Crystalline Silica Construction Standard and OSHA's Hazard Communication Standard. Managers and Competent Persons may receive more advanced training than other employees.
- Maintain written records of training (for example, proper use of respirators), ECPs, inspections (for equipment, PPE, and work methods/practices), medical surveillance (under lock and key), respirator medical clearances (under lock and key) and fit-test results.
- Conduct an annual review (or more often if conditions change) of the effectiveness of this program and any active project ECP's that extend beyond a year. This includes a review of available dust control technologies to ensure these are selected and used when practical.
- Coordinate work with other employers and contractors to ensure a safe work environment relative to Silica exposure.

## **Project Manager**

- Ensure all applicable elements of this Respirable Crystalline Silica Program are implemented on the project including the selection of a Competent Person.
- Assist the Safety Department in conduct job site assessments for Silica containing materials and perform employee Respirable Crystalline Silica hazard assessments in order to determine if an ECP, exposure monitoring, and medical surveillance is necessary.
- Assist in the selection and implementation of the appropriate control measures in accordance with the Construction Tasks identified in OSHA's Construction Standard Table 1; and potentially including (but not limited to) - a written Exposure Control Plan (ECP), exposure monitoring, Hazard Communication training, medical surveillance, housekeeping and others.
- Ensure that employees using respirators have been properly trained, medically cleared, and fit-tested in accordance with the company's Respiratory Protection Program. This process will be documented.
- Ensure that work is conducted in a manner that minimizes and adequately controls the risk to workers and others. This includes ensuring that workers use appropriate engineering controls, work practices, and wear the necessary PPE.
- Where there is risk of exposure to Silica dust, verify employees are properly trained on the applicable contents of this program, the project-specific ECP, and the applicable OSHA Standards (such as Hazard Communication). Ensure employees are provided appropriate PPE when conducting such work.

## **Competent Person and/or Site Manager (Superintendent, Foreman, etc.)**

- Make frequent and regular inspections of job sites, materials, and equipment to implement the written ECP.
- Identify existing and foreseeable Respirable Crystalline Silica hazards in the workplace and take prompt corrective measures to eliminate or minimize them.
- Notify the Project Manager and/or Safety Department of any deficiencies identified during inspections in order to coordinate and facilitate prompt corrective action.
- Assist the Project Manager and Safety Department in conducting job site assessments for Silica containing materials and perform employee Respirable Crystalline Silica hazard assessments in order to determine if an ECP, exposure monitoring, and medical surveillance is necessary.

## **Employees:**

- Follow recognized work procedures (such as the Construction Tasks identified in OSHA's Construction Standard Table 1) as established in the project's ECP and this program.
- Use the assigned PPE in an effective and safe manner.
- Participate in Respirable Crystalline Silica exposure monitoring and the medical surveillance program.
- Report any unsafe conditions or acts to the Site Manager and/or Competent Person.
- Report any exposure incidents or any signs or symptoms of Silica illness.

## **DEFINITIONS**

If a definition is not listed in this section, please contact your supervisor. If your supervisor is unaware of what the term means, please contact the Competent Person or your Safety Department.

- Action Level means a concentration of airborne Respirable Crystalline Silica of  $25 \mu\text{g}/\text{m}^3$ , calculated as an 8-hour TWA.
- Competent Person means an individual who is capable of identifying existing and foreseeable Respirable Crystalline Silica hazards in the workplace and who has authorization to take prompt corrective measures to eliminate or minimize them.
- Employee Exposure means the exposure to airborne Respirable Crystalline Silica that would occur if the employee were not using a respirator.
- High-Efficiency Particulate Air (HEPA) Filter means a filter that is at least 99.97 percent efficient in removing monodispersed particles of 0.3 micrometers in diameter.
- Objective Data means information, such as air monitoring data from industry-wide surveys or calculations based on the composition of a substance, demonstrating employee exposure to Respirable Crystalline Silica associated with a particular product or material or a specific process, task, or activity. The data must reflect workplace conditions closely resembling or with a higher exposure potential than the processes, types of material, control methods, work practices, and environmental conditions in the employer's current operations.
- Permissible Exposure Limit (PEL) means the employer shall ensure that no employee is exposed to an airborne concentration of Respirable Crystalline Silica in excess of  $50 \mu\text{g}/\text{m}^3$ , calculated as an 8-hour TWA.
- Physician or Other Licensed Health Care Professional (PLHCP) means an individual whose legally permitted scope of practice (i.e., license, registration, or certification) allows him or her to independently provide or be delegated the responsibility to provide some or all of the

particular health care services required by the Medical Surveillance Section of the OSHA Respirable Crystalline Silica Standard.

- Respirable Crystalline Silica means Quartz, Cristobalite, and/or Tridymite contained in airborne particles that are determined to be respirable by a sampling device designed to meet the characteristics for respirable-particle size- selective samplers specified in the International Organization for Standardization (ISO) 7708:1995: Air Quality-Particle Size Fraction Definitions for Health-Related Sampling.
- Specialist means an American Board Certified Specialist in Pulmonary Disease or an American Board Certified Specialist in Occupational Medicine.

## REQUIREMENTS

### Specified Exposure Control Methods

When possible and applicable, “The Joint Venture” will conduct activities involving potential Silica exposure to be consistent with OSHA’s Construction Standard Table 1. Supervisors will ensure each employee under their supervision and engaged in a task identified on OSHA’s Construction Standard Table 1 have fully and properly implemented the engineering controls, work practices, and respiratory protection specified for the task on Table 1 (unless Fontaine Bros Inc. has assessed and limited the exposure of the employee to Respirable Crystalline Silica in accordance with the Alternative Exposure Control Methods Section of this program).

The task(s) being performed by Fontaine Bros Inc. identified on OSHA’s Construction Standard Table 1 is/are: **Select any/all of the following that apply:**

Table 1: Specified Exposure Control Methods When  
Working With Materials Containing Crystalline Silica

| Construction Task or Equipment Operation |  | Engineering and Work Practice Control Methods  | Required Respiratory Protection                              |  |
|--|--|--|--|--|

| 18b                                      | Heavy equipment and utility vehicles for tasks such as grading and excavating but not including demolishing, abrading, or fracturing silica-containing materials | <ul style="list-style-type: none"> <li>When the equipment operator is the only employee engaged in the task, operate equipment from within an enclosed cab.</li> </ul> | None                            | None           |

When implementing the control measures specified in Table 1, "The Joint Venture" shall:

- For tasks performed indoors or in enclosed areas, provide a means of exhaust as needed to minimize the accumulation of visible airborne dust;
- For tasks performed using wet methods, apply water at flow rates sufficient to minimize release of visible dust;
- For measures implemented that include an enclosed cab or booth, ensure that the enclosed cab or booth:
  - Is maintained as free as practicable from settled dust;
  - Has door seals and closing mechanisms that work properly;
  - Has gaskets and seals that are in good condition and working properly;
  - Is under positive pressure maintained through continuous delivery of fresh air;
  - Has intake air that is filtered through a filter that is 95% efficient in the 0.3-10.0 µm range (e.g., MERV-16 or better); and
  - Has heating and cooling capabilities.
- Where an employee performs more than one task included on OSHA's Construction Standard Table 1 during the course of a shift, and the total duration of all tasks combined is

more than four hours, the required respiratory protection for each task is the respiratory protection specified for more than four hours per shift. If the total duration of all tasks on Table 1 combined is less than four hours, the required respiratory protection for each task is the respiratory protection specified for less than four hours per shift.

## **Alternative Exposure Control Methods**

Alternative Exposure Control Methods apply for tasks not listed in OSHA's Construction Standard Table 1, or where "The Joint Venture" cannot not fully and properly implement the engineering controls, work practices, and respiratory protection described in Table 1.

First, "The Joint Venture" will assess the exposure of each employee who is or may reasonably be expected to be exposed to Respirable Crystalline Silica at or above the Action Level in accordance with either the Performance Option or the Scheduled Monitoring Option.

- **Performance Option** – "The Joint Venture" will assess the 8-hour TWA exposure for each employee on the basis of any combination of air monitoring data or objective data sufficient to accurately characterize employee exposures to Respirable Crystalline Silica.
- **Scheduled Monitoring Option:**
  - "The Joint Venture" will perform initial monitoring to assess the 8-hour TWA exposure for each employee on the basis of one or more personal breathing zone air samples that reflect the exposures of employees on each shift, for each job classification, and in each work area. Where several employees perform the same tasks on the same shift and in the same work area, "The Joint Venture" will plan to monitor a representative fraction of these employees. When using representative monitoring, "The Joint Venture" will sample the employee(s) who are expected to have the highest exposure to Respirable Crystalline Silica.
  - If initial monitoring indicates that employee exposures are below the Action Level, "The Joint Venture" will probably discontinue monitoring for those employees whose exposures are represented by such monitoring.
  - Where the most recent exposure monitoring indicates that employee exposures are at or above the Action Level but at or below the PEL, "The Joint Venture" will repeat such monitoring within six months of the most recent monitoring.
  - Where the most recent exposure monitoring indicates that employee exposures are above the PEL, "The Joint Venture" will repeat such monitoring within three months of the most recent monitoring.
  - Where the most recent (non-initial) exposure monitoring indicates that employee exposures are below the Action Level, "The Joint Venture" will repeat such monitoring within six months of the most recent monitoring until two consecutive measurements, taken seven or more days apart, are below the Action Level, at which time "The Joint Venture" will probably discontinue monitoring for those employees whose exposures are represented by such monitoring, except when a reassessment is required. "The Joint Venture" will reassess exposures whenever a change in the production, process, control

equipment, personnel, or work practices may reasonably be expected to result in new or additional exposures at or above the Action Level, or when “The Joint Venture” has any reason to believe that new or additional exposures at or above the Action Level have occurred.

“The Joint Venture” will ensure that all Respirable Crystalline Silica samples taken to satisfy the monitoring requirements of this program and OSHA are collected by a qualified individual (i.e. a Certified Industrial Hygienist) and the samples are evaluated by a qualified laboratory (i.e. accredited to ANSI/ISO/IEC Standard 17025:2005 with respect to Crystalline Silica analyses by a body that is compliant with ISO/IEC Standard 17011:2004 for implementation of quality assessment programs).

Within five working days after completing an exposure assessment, “The Joint Venture” will individually notify each affected employee in writing of the results of that assessment or post the results in an appropriate location accessible to all affected employees.

Whenever an exposure assessment indicates that employee exposure is above the PEL, “The Joint Venture” will describe in the written notification the corrective action being taken to reduce employee exposure to or below the PEL.

Where air monitoring is performed, “The Joint Venture” will provide affected employees or their designated representatives an opportunity to observe any monitoring of employee exposure to Respirable Crystalline Silica. When observation of monitoring requires entry into an area where the use of protective clothing or equipment is required for any workplace hazard, “The Joint Venture” will provide the observer with protective clothing and equipment at no cost and shall ensure that the observer uses such clothing and equipment.

Once air monitoring has been performed, “The Joint Venture” will determine its method of compliance based on the monitoring data and the hierarchy of controls. “The Joint Venture” will use engineering and work practice controls to reduce and maintain employee exposure to Respirable Crystalline Silica to or below the PEL, unless “The Joint Venture” can demonstrate that such controls are not feasible. Wherever such feasible engineering and work practice controls are not sufficient to reduce employee exposure to or below the PEL, “The Joint Venture” will nonetheless use them to reduce employee exposure to the lowest feasible level and shall supplement them with the use of respiratory protection.

In addition to the requirements of this program, “The Joint Venture” will comply with other programs and OSHA standards (such as 29 CFR 1926.57 [Ventilation]), when applicable where abrasive blasting is conducted using Crystalline Silica-containing blasting agents, or where abrasive blasting is conducted on substrates that contain Crystalline Silica.

## **Control Methods**

“The Joint Venture” will provide control methods that are either consistent with Table 1 or otherwise minimize worker exposures to Silica. These exposure control methods can include engineering controls, work practices, and respiratory protection. Listed below are control methods to be used when Table 1 is not followed:

## **List Control Methods**

### **Respiratory Protection**

Where respiratory protection is required by this program, "The Joint Venture" will provide each employee an appropriate respirator that complies with the requirements of the company's Respiratory Protection Program and the OSHA Respiratory Protection Standard (29 CFR 1910.134).

Respiratory protection is required where specified by the OSHA Construction Standard Table 1, for tasks not listed in Table 1, or where the company has not fully and properly implemented the engineering controls, work practices, and respiratory protection described in Table 1. Situations requiring respiratory protection include:

- Where exposures exceed the PEL during periods necessary to install or implement feasible engineering and work practice controls;
- Where exposures exceed the PEL during tasks, such as certain maintenance and repair tasks, for which engineering and work practice controls are not feasible; and
- During tasks for which an employer has implemented all feasible engineering and work practice controls and such controls are not sufficient to reduce exposures to or below the PEL.

### **Housekeeping**

"The Joint Venture" does not allow dry sweeping or dry brushing where such activity could contribute to employee exposure to Respirable Crystalline Silica unless wet sweeping, HEPA-filtered vacuuming, or other methods that minimize the likelihood of exposure are not feasible.

"The Joint Venture" does not allow compressed air to be used to clean clothing or surfaces where such activity could contribute to employee exposure to Respirable Crystalline Silica unless:

- The compressed air is used in conjunction with a ventilation system that effectively captures the dust cloud created by the compressed air; or
- No alternative method is feasible.

### **Written Exposure Control Plan**

When employee exposure on a construction project is expected to be at or above the Action Level, a Written Exposure Control Plan (ECP) will be established and implemented. This ECP will contain at least the following elements:

- A description of the tasks in the workplace that involve exposure to Respirable Crystalline Silica;

- A description of the engineering controls, work practices, and respiratory protection used to limit employee exposure to Respirable Crystalline Silica for each task;
- A description of the housekeeping measures used to limit employee exposure to Respirable Crystalline Silica; and
- A description of the procedures used to restrict access to work areas, when necessary, to minimize the number of employees exposed to Respirable Crystalline Silica and their level of exposure, including exposures generated by other employers or sole proprietors.

The written ECP will designate a Competent Person to make frequent and regular inspections of job sites, materials, and equipment to ensure the ECP is implemented.

The written ECP will be reviewed at least annually to evaluate the effectiveness of it and update it as necessary. Having said this, ECP's are project specific and most project durations do not exceed a year. The written ECP will be readily available for examination and copying, upon request, to each employee covered by this program and/or ECP, their designated representatives, and OSHA.

## **Medical Surveillance**

Medical surveillance will be made available for each employee who will be required to use a respirator for 30 or more days per year due to their Respirable Crystalline Silica exposure. Medical surveillance (i.e. medical examinations and procedures) will be performed by a PLHCP and provided at no cost to the employee at a reasonable time and place.

"The Joint Venture" will make available an initial (baseline) medical examination within 30 days after initial assignment, unless the employee has received a medical examination that meets the requirements of the OSHA Respirable Crystalline Silica Construction Standard within the last three years. The examination shall consist of:

- A medical and work history, with emphasis on past, present, and anticipated exposure to Respirable Crystalline Silica, dust, and other agents affecting the respiratory system in addition to any history of respiratory system dysfunction, including signs and symptoms of respiratory disease (e.g., shortness of breath, cough, wheezing), history of tuberculosis, and smoking status and history;
- A physical examination with special emphasis on the respiratory system;
- A chest X-ray (a single postero-anterior radiographic projection or radiograph of the chest at full inspiration recorded on either film [no less than 14 x 17 inches and no more than 16 x 17 inches] or digital radiography systems) interpreted and classified according to the International Labour Office (ILO) International Classification of Radiographs of Pneumoconiosis by a NIOSH-certified B Reader;
- A pulmonary function test to include forced vital capacity (FVC) and forced expiratory volume in one second (FEV1) and FEV1/FVC ratio, administered by a spirometry technician with a current certificate from a NIOSH-approved spirometry course;

- Testing for latent tuberculosis infection; and
- Any other tests deemed appropriate by the PLHCP.

“The Joint Venture” will make available medical examinations that include the aforementioned procedures (except testing for latent tuberculosis infection) at least every three years. If recommended by the PLHCP, periodic examinations can be more frequently than every three years.

“The Joint Venture” will ensure that the examining PLHCP has a copy of the OSHA Respirable Crystalline Silica Construction Standard, this program, and the following information:

- A description of the employee's former, current, and anticipated duties as they relate to the employee's occupational exposure to Respirable Crystalline Silica;
- The employee's former, current, and anticipated levels of occupational exposure to Respirable Crystalline Silica;
- A description of any personal protective equipment (PPE) used or to be used by the employee, including when and for how long the employee has used or will use that equipment; and
- Information from records of employment-related medical examinations previously provided to the employee and currently within the control of “The Joint Venture”

“The Joint Venture” will ensure that the PLHCP explains to the employee the results of the medical examination and provides each employee with a written medical report within 30 days of each medical examination performed. The written report shall contain:

- A statement indicating the results of the medical examination, including any medical condition(s) that would place the employee at increased risk of material impairment to health from exposure to Respirable Crystalline Silica and any medical conditions that require further evaluation or treatment;
- Any recommended limitations on the employee's use of respirators;
- Any recommended limitations on the employee's exposure to Respirable Crystalline Silica; and;
- A statement that the employee should be examined by a Specialist if the chest X-ray is classified as 1/0 or higher by the B Reader, or if referral to a Specialist is otherwise deemed appropriate by the PLHCP.

“The Joint Venture” will also obtain a written medical opinion from the PLHCP within 30 days of the medical examination. The written opinion shall contain only the following in order to protect the employee's privacy:

- The date of the examination;

- A statement that the examination has met the requirements of the OSHA Respirable Crystalline Silica Construction Standard; and
- Any recommended limitations on the employee's use of respirators.

If the employee provides written authorization, the written opinion shall also contain either or both of the following:

- Any recommended limitations on the employee's exposure to Respirable Crystalline Silica; and/or
- A statement that the employee should be examined by a Specialist if the chest X-ray is classified as 1/0 or higher by the B Reader, or if referral to a Specialist is otherwise deemed appropriate by the PLHCP.

If the PLHCP's written medical opinion indicates that an employee should be examined by a Specialist, "The Joint Venture" will make available a medical examination by a Specialist within 30 days after receiving the PLHCP's written opinion. "The Joint Venture" will ensure that the examining Specialist is provided with all of the information that the employer is obligated to provide to the PLHCP.

"The Joint Venture" will ensure that the Specialist explains to the employee the results of the medical examination and provides each employee with a written medical report within 30 days of the examination. The written report will contain:

- A statement indicating the results of the medical examination, including any medical condition(s) that would place the employee at increased risk of material impairment to health from exposure to Respirable Crystalline Silica and any medical conditions that require further evaluation or treatment;
- Any recommended limitations on the employee's use of respirators; and
- Any recommended limitations on the employee's exposure to respirable crystalline Silica.

In addition, "The Joint Venture" will obtain a written opinion from the Specialist within 30 days of the medical examination. The written opinion shall contain the following:

- The date of the examination;
- Any recommended limitations on the employee's use of respirators; and
- If the employee provides written authorization, the written opinion shall also contain any recommended limitations on the employee's exposure to Respirable Crystalline Silica.

## **Hazard Communication**

“The Joint Venture” will include Respirable Crystalline Silica in the company’s Hazard Communication Program established to comply with the OSHA Hazard Communication Standard (29 CFR 1910.1200).

“The Joint Venture” will ensure that each employee has access to labels on containers of Crystalline Silica and those containers respective Safety Data Sheets (SDS’s).

All employees will be trained in accordance with the provisions of the OSHA Hazard Communication Standard and the Training Section of this program. This training will cover concerns relating to cancer, lung effects, immune system effects, and kidney effects.

“The Joint Venture” will ensure that each employee with the potential to be exposed at or above the Action Level for Respirable Crystalline Silica can demonstrate knowledge and understanding of at least the following:

- The health hazards associated with exposure to Respirable Crystalline Silica;
- Specific tasks in the workplace that could result in exposure to Respirable Crystalline Silica;
- Specific measures “The Joint Venture” has implemented to protect employees from exposure to Respirable Crystalline Silica, including engineering controls, work practices, and respirators to be used;
- The contents of the OSHA Respirable Crystalline Silica Construction Standard;
- The identity of the Competent Person designated by “The Joint Venture”; and
- The purpose and a description of the company’s Medical Surveillance Program.

“The Joint Venture” will make a copy of the OSHA Respirable Crystalline Silica Construction Standard readily available without cost to any employee who requests it.

## **Recordkeeping**

“The Joint Venture” will make and maintain an accurate record of all exposure measurements taken to assess employee exposure to Respirable Crystalline Silica. This record will include at least the following information:

- The date of measurement for each sample taken;
- The task monitored;
- Sampling and analytical methods used;
- Number, duration, and results of samples taken;

- Identity of the laboratory that performed the analysis;
- Type of personal protective equipment (PPE), such as respirators, worn by the employees monitored; and
- Name, social security number, and job classification of all employees represented by the monitoring, indicating which employees were actually monitored.

“The Joint Venture” will ensure that exposure records are maintained and made available in accordance with 29 CFR 1910.1020. Exposure records will be kept for at least 30 years.

The employer shall make and maintain an accurate record of all objective data relied upon to comply with the requirements of the OSHA Respirable Crystalline Silica Construction Standard. This record shall include at least the following information:

- The Crystalline Silica-containing material in question;
- The source of the objective data;
- The testing protocol and results of testing;
- A description of the process, task, or activity on which the objective data were based; and
- Other data relevant to the process, task, activity, material, or exposures on which the objective data were based.

“The Joint Venture” will ensure that objective data are maintained and made available in accordance with 29 CFR 1910.1020. Objective data records will be kept for at least 30 years.

“The Joint Venture” will make and maintain an accurate record for each employee enrolled in the Medical Surveillance portion of this program. The record shall include the following information about the employee:

- Name and social security number;
- A copy of the PLHCPs' and/or Specialists' written medical opinions; and
- A copy of the information provided to the PLHCPs and Specialists.

“The Joint Venture” will ensure that medical records are maintained and made available in accordance with 29 CFR 1910.1020. Medical records will be kept under lock and key for at least the duration of employment plus 30 years. It is necessary to keep these records for extended periods because Silica-related diseases such as cancer often cannot be detected until several decades after exposure. However, if an employee works for an employer for less than one year, the employer does not have to keep the medical records after employment ends, as long as the employer gives those records to the employee.

## **PROGRAM EVALUATION**

This program will be reviewed and evaluated on an annual basis by the Safety Department unless changes to operations, the OSHA Respirable Crystalline Silica Construction Standard (29 CFR 1926.1153), or another applicable OSHA Standard require an immediate re-validation of this program.

## **Asbestos**

It is the responsibility of each contractor and sub-contractor to determine the presence of hazardous materials and invoke safe work practices meeting all federal, state, and local mandates regarding disturbing, handling, removing, storage, and disposing of same.

Based on information available, it has been determined that this site has;

X Asbestos

No Asbestos

Possibility of  
Asbestos

Asbestos may be found in the following locations on this project;

☐ Boilers and Heating Systems

☐ Ceiling tiles

☐ Floor tile(s)

☐ Glue daubs

☐ Window caulking and glazing

☐ Linoleum and cove base

☐ Pipe insulation

☐ Plaster

☐ Roofing adhesives, flashing and membranes

☐ Sheetrock and joint compound

- Although some materials can be identified as non-asbestos by touch (such as fiberglass), the only way to confirm whether or not the material is non-asbestos is to test it.
- All material that has not been tested, but has the possibility of being asbestos must be treated as "presumed asbestos containing material" or PACM
- Review any survey that has been done by the facility for the project.

## **Lead**

Lead contaminated materials, including glazed blocks and tiles, paints, plumbing and stains may be present on site.

- The following materials has tested positive for lead on this project;

☐ **Wood**      ☐ **Glazed Block**      ☐ **Glazed Tile**      ☐ **Paint**      ☐ **Steel**

- Lead containing materials shall be properly removed and disposed of using lead safe work practices.
  - Lead contaminated wastes shall not be discarded into a construction dumpster, as the level of lead may exceed a TCLP (*Toxicity Characteristic Leaching Procedure*) test, rendering the dumpster contaminated and unable to be disposed of, except at an approved lead landfill, with appropriate documentation.
- “The Joint Venture”, with the permission of the owner or owner's representative, is responsible for the safe removal and disposal of all lead containing materials.

For this project, the contact person for lead safe work practices and disposal requirements is;

## **Cranes, Derricks, Hoists and Lifts**

- All cranes derricks and lifts shall comply with the requirements of OSHA Final Rule effective date November 8, 2010 (Subpart CC.)
  - “The Joint Venture”, working with the crane operator shall insure that a “competent” person has been appointed to act as the person-in-charge for all lifts involving cranes, regardless of size and/or weight capacity.

The person-in-charge is required to have a pre-lift plan for regulatory and safety reasons. The plan must include, but is not limited to the following requirements;

- The operators name and proof of certification, as well as the signaler name and verification of training
- Area survey to ensure that the work site is stable and appropriate for the weight and work activities of the crane
- Description, type and rated capacity of the crane being used for the lift
- The list of the equipment or material being lifted, including weight, dimensions and other applicable information
- Appropriate sketches or blueprints of how the material will be lifted.
- Boom and swing angles, crane orientations, lifting points, methods of attachment and rated capacity.
- A pre-lift meeting with all personnel that will be involved with the lift, or in close proximity to same.

“The Joint Venture” or their designee is required to barricade or provide warnings to alert persons in close proximity about the overhead work. This shall include, but is not limited to;

- protection of doorways and exits, which might include redirection to an alternative entrance / exit
- tape off hazardous areas, including swing zones and areas where overhead hazards are likely to fall
- Inspections of cranes, derricks and associated attachments shall be made by a competent person prior to each use

Crane Operators are responsible for operations under their direct control. They shall;

- Not engage in any practice that will divert their attention while operating the hoisting equipment
- Not operate the lift if their operation is / might be impaired (mentally or physically)
- Perform an equipment assessment (walk around inspection) to verify personnel, equipment and site safety
- Place appropriate barriers or warning lines around the superstructure to prevent unauthorized entry into the site / area of swing
- Test all controls and emergency stops
  - improperly functioning / working controls must be adjusted / repaired before the equipment is used.
  - If not repairable, the unit must be removed from service and locked and / or tagged "Out Of Service DO Not Use".

- Respond appropriately to any signals from a trained "signalperson", or by radio or phone contact (hands-free).
- Be responsible for anyone working under their direct control, and shall stop any unsafe or potential unsafe operation until corrections can be made
- Secure and make safe any unattended hoisting equipment
- Not permit any person to work under the boom or suspended load

A competent, authorized and properly trained person shall inspect cranes, derricks and associated equipment, as specified by the manufacturer, prior to each use.

- Crane operators are responsible for their cranes and derricks before, during and after any lift.
  - If the safety of the personnel, equipment or facility is in question, the competent person shall;
    - Stop all hoist activities
    - Refuse to handle or lift non-conforming loads

Hoisting employees on a personal platform of cranes and derricks, when steel erection is being conducted is permitted, provided that all provisions of 29 CFR 1926.550 [except 1926.550(g)(2)] are met.

- Headache balls cannot be used to transport personnel
- Safety latches on crane hooks (regardless of hook capacity and size) shall not be deactivated, removed or disabled
- Crane Inspections shall;
  - Be performed by a competent person and shall include all aspects, as specified by the manufacturer of the crane.
  - **A qualified rigger must be used during all rigging and hoisting operations**

Use of cranes, including lifting procedures, assembling and disassembling shall be done in accordance with manufactures specifications.

## **Demolition: Subpart T**

**A Written Demolition Plan must be submitted and approved prior to building demolition.**

- All demolition work, which creates dust (regardless of type), shall incorporate the use of dust control methods, such as a water spray, or other engineering controls to limit dust migration. The use of HEPA Vacuums will be used in conjunction with 6mil poly barriers to control airborne dust concentrations as needed.

### **Demolition Safety Tips**

Demolition work involves many of the same hazards that arise during other construction activities. However, demolition also involves additional hazards due to a variety of other factors. Some of these include: lead-based paint, sharp or protruding objects and asbestos-containing material.

### **Preventing Falls**

- Brace or shore up the walls and floors of structures which have been damaged and which employees must enter.
- Inspect personal protective equipment (PPE) before use.
- Select, wear and use appropriate PPE for the task.
- Inspect all stairs, passageways, and ladders; illuminate all stairways.
- Shut off or cap all electric, gas, water, steam, sewer, and other service lines; notify appropriate utility companies.
- Guard wall openings to a height of 42 inches; cover and secure floor openings with material able to withstand the loads likely to be imposed.
- Floor openings used for material disposal must not be more than 25% of the total floor area.
- Use enclosed chutes with gates on the discharge end to drop demolition material to the ground or into debris containers.
- Demolition of exterior walls and floors must begin at the top of the structure and proceed downward.
- Structural or load-supporting members on any floor must not be cut or removed until all stories above that floor have been removed.
- All roof cornices or other ornamental stonework must be removed prior to pulling walls down.
- Employees must not be permitted to work where structural collapse hazards exist until they are corrected by shoring, bracing, or other effective means.

## IAQ Indoor Air Quality Management Program

Incorporate indoor air quality goals into the construction process.

Ensure that all members of the construction project team are knowledgeable about indoor quality issues and have defined responsibilities for implementation of good indoor air quality practices.

Require the development and use of this indoor air quality management plan. The purpose of the management plan is to prevent residual problems with indoor air quality in the completed building and protect workers on the site from undue health risks during construction. The plan should identify specific measures to address:

- Problem substances, including: construction dust, chemical fumes, off-gassing materials, and moisture. The plan should ensure that these problems are not introduced during construction, or, if they must be, eliminates or reduces their impact.
- Areas of planning, including: product substitutions and materials storage, safe installation, proper sequencing, regular monitoring, and safe and thorough cleanup.

**Conduct regular inspection and maintenance of indoor air quality measures including ventilation system protection and ventilation rate.**

**Conduct safety meetings, develop signage, and establish subcontractor agreements that communicate the goals of the construction indoor air quality plan.** The indoor air quality construction plan is also a good opportunity to proscribe behaviors unacceptable to the owner that represent a potentially negative impact on long term indoor air quality such as smoking, using chew tobacco, or wearing contaminated work clothes.

**Require contractors to provide information on product substitutions sufficient to enable operations and maintenance staff to properly maintain and repair materials in place.**

### Construction Practices

During construction, there are several simple actions contractors can perform that will minimize the potential for indoor air quality problems. Trades that need to be especially careful include: flooring, roofing, painting, drywall, HVAC, insulators, and the clean-up crew.

**Keep building materials dry.** Building materials, especially those with moisture absorbing properties like wood, insulation, paper, and fabric, should be kept dry to prevent the growth of mold and bacteria. If moisture is present, mold will grow on any virtually any material. Some building materials such as wood may arrive at the construction site with a high- moisture content or may have been wetted before arrival or during the transport process. Wet materials need to be allowed to dry as much as possible as weather permits. Cover dry materials with plastic to prevent rain damage, and if resting on the ground, use spacers to allow air to circulate between the ground and the materials.

**Dry water damaged materials quickly.** Water damaged materials should be dried within 24 hours. Due to the possibility of mold growth, materials that are damp or wet for more than 72 hours may need to be discarded.

**Clean spills immediately.** If solvents, cleaners, gasoline, or other odorous or potentially toxic liquids are spilled onto the floor, they should be cleaned up immediately. If a spill occurs on an

easily replaced building material, it may be safest to discard it and replace it with new material. Odors from significant spills can linger sometimes for years, causing comfort and health problems for the future occupants of the building.

**Seal unnecessary openings.** Seal all unnecessary openings in walls, floors, and ceilings that separate conditioned space (heated or cooled) from unconditioned space. For example, it is common to punch large holes in the floor to allow pipes and wires to run between the rooms above and the crawlspaces or tunnels below. These oversized openings can cause two significant indoor air quality problems. Air that is contaminated with mold, radon, moisture, and pesticides can easily enter the rooms; and pests such as roaches or rodents can enter the rooms, leaving behind odors and allergens.

**Temporarily seal duct-work.** As duct-work is being installed, all return and supply air vents and any open duct-work should be temporarily sealed to prevent the duct-work and air handling units from being contaminated with construction debris or dust.

**Ventilate when needed.** Some construction activities can release large amounts of VOCs into the building, and if the building is already enclosed with walls, windows, and doors, outdoor air can no longer easily flow through the building and remove the VOCs. In addition to affecting the health of the construction workers, these VOCs can also be adsorbed onto other building materials and be re-released into the air later when the building is occupied by children and staff. During certain construction activities, temporary ventilation systems should be installed to quickly remove the gases.

Ventilation is generally needed when "wet" building materials are in use, when using materials that give off an odor, or when using materials that carry a manufacturer's warning regarding the need for ventilation. Odors from building materials are the result of chemicals being released from the materials into the air, so if there is an odor present, it is safest to provide ventilation that will quickly remove those odors from the building. Examples of potentially problematic construction activities include painting (even with no- or low-VOC paints), spreading of floor adhesives, and use of large amounts of caulk, sealants, and cleaning agents. Additionally, the installation of large amounts of building materials, such as carpet or vinyl-based flooring products and composite wood cabinets and shelves, can require extra ventilation if the material has not been carefully selected or aired-out before being unrolled or unpackaged within the building.

**During installation of carpet, paints, furnishings, and other VOC-emitting products, provide supplemental (spot) ventilation for at least 72 hours after work is completed.**

It is important that an exhaust fan be used to pull the polluted air out of the building, not to push outdoor air into the building. Simply opening windows or doors is not enough to effectively exhaust contaminants in most cases. The fan should be placed in a window or exterior door as close to the work area as possible, and any openings in the window or door around the fan be temporarily sealed with plastic or cardboard. Then open a window or exterior door at the opposite end of the room or building, so that fresher outdoor air will flow across the work area and sweep polluted air out through the exhaust fan. The size of exhaust fan needed will increase as the size of the room increases, and as the amount of gases being released into the air increases. The fan should provide about 5 air changes per hour (5 ACH). Divide the volume of the room in cubic feet by 12 to get the minimum amount of cubic feet per minute (CFM) that the fan must be able to exhaust. For example, a room with a volume of 9000 cubic feet (1000 square feet of floor area with 9 foot ceilings) divided by 12 results in a fan of 750 CFM. A 21 inch box fan may be sufficient for a single room if the materials are not too strong a source of gases, but would certainly not be sufficient for a wing or a whole

building. As a rule of thumb, there may be enough airflow if odors do not spread out of the immediate area where the work is being performed, if dust or smoke released into the air can be seen to be drawn towards the exhaust fan. As long as the odors or air pollutants are present, the temporary exhaust ventilation must continue to be operated, even during nights and weekends if necessary. Ventilation should continue for a minimum of 24 hours after completion, or until there are no longer any noticeable odors.

**Barriers** are to be installed to prevent dust mitigation into occupied areas. The barriers will be made from 6mil poly held into place with tensioners or high quality duct-tape.

A negative pressure will be created in the work zone using one or more negative pressure ventilation machines. The filter media on each machine will be inspected and replaced at regular intervals.

**Reduce construction dust.** Minimize the amount of dust in the air and on surfaces. Examples include use of vacuum assisted drywall sanding equipment, and use of vacuums instead of brooms to clean construction dust from floors.

**Use wet sanding for gypsum board assemblies when possible.**

**Exception:** Dry sanding is acceptable if the following measures are taken:

- Full isolation of space under finishing
- Vacuum systems are used
- Plastic protection sheeting is installed to provide air sealing during the sanding
- Closure of all air system devices and ductwork
- Sequencing of construction precludes the possibility of contamination of other spaces with gypsum dust
- Worker protection is provided. Use safety meetings, signage, and subcontractor agreements to communicate the goals of the construction indoor air quality plan.

**Avoid use of combustion equipment indoors.** Engines and heaters that run on gasoline, diesel, kerosene, or other fossil fuels should not be operated indoors unless absolutely necessary, and only when large quantities of exhaust ventilation are provided to remove combustion pollutants such as carbon monoxide and moisture.

**Store liquids outdoors.** To reduce the possibility of spills during storage, transfer, or mixing, store all odorous or toxic liquids outside the building and protect against freezing.

**Smoking** will only be allowed in designated areas. No exceptions.

**Use less toxic cleaning agents.** Ensure that the cleaning crews do not use highly toxic or odorous cleaning agents inside the building.

## **RESPIRATORY PROTECTION PROGRAM**

### **Policy Statement**

To control and or minimize the threat of occupational diseases caused by breathing air contaminated with harmful dusts, fumes, mists, gases, smokes, sprays, or vapors, the primary objective of this program shall be to prevent atmospheric contamination.

This shall be accomplished as far as feasible by accepted engineering control measures (for example, enclosure or confinement of the operation, general and local ventilation, and substitution of less toxic substance). When effective engineering controls are not feasible, or while they are being instituted, appropriate respirators shall be used.

### **Written Program**

Effective implementation of this program requires support from all levels of management within "The Joint Venture". This written program will be communicated to all personnel that are affected by it. It encompasses the total workplace, regardless of the number of workers employed or the number of work shifts. It is designed to establish clear goals, and objectives.

### **Medical Evaluations**

All contractors shall provide a medical evaluation to determine the employee's ability to use a respirator. "The Joint Venture" shall identify a physician or other licensed health care professional to perform medical evaluations using a medical questionnaire and an initial medical examination.

### **Employer and Employee Responsibility**

#### **Employer's Responsibility**

Respirators shall be provided by the respective employer when they are necessary to protect employee's health.

The respirator provided shall be suitable for the intended use,

Each contractor shall be responsible for establishing and maintaining a respiratory program whenever respirators are used.

#### **Employee's Responsibility**

The employee shall use the respiratory protection in accordance with instructions and training received or contracted by their employer.

The employee shall guard against damage to the respirator, and immediately replace suspect respirators.

The employee shall report any trouble with or malfunction of the respirator to his/her Foreman.

## Respirators

Respirators shall be provided by the respective employer when such equipment is necessary to protect the health of the employees:

### Contractors shall:

- Provide the respirators, which are applicable and suitable for the purpose intended.
- **Be responsible for the establishment and maintenance of a written respiratory protection program.**
- The employee shall use the provided respiratory protection in accordance with instructions and training received.
- Respirators shall be selected on the basis of hazards to which the worker is exposed.
- The user shall be instructed and trained in the proper use of respirators and their limitations.
- Respirators shall be regularly cleaned and disinfected. Those worn by more than one worker shall be thoroughly cleaned and disinfected after each use.
- Respirators shall be stored in a convenient, clean, and sanitary location.
- Respirators used routinely shall be inspected during cleaning. Worn or deteriorated parts shall be replaced. Respirators for emergency use such as self-contained devices shall be thoroughly inspected at least once a month and after each use.
- Appropriate surveillance of work area conditions and degree of employee exposure or stress shall be maintained.
- There shall be regular inspection and evaluation to determine the continued effectiveness of the program.
- Employees will not be assigned to tasks requiring use of respirators unless it has been determined that they are physically able to perform the work and use the equipment. A physician shall determine what health and physical conditions are pertinent. The respirators user's medical status will be reviewed on a periodic basis.
- NIOSH approved or accepted respirators shall be used when they are available. The respirator furnished shall provide adequate respiratory protection against the particular hazard for which it is designed.

## Confined Space Entry

### ASSIGNMENT OF RESPONSIBILITY

Typically, while performing work on a construction site, the Company may serve in the role of an Entry Employer or as the Host Employer or Controlling Contractor, as defined herein. The following outlines the Assignment of Responsibilities as well as guidance and recommendations pertaining to each of these roles.

**Company Policy:** *When the scale of the project is such that Host Employer does not possess confined space entry resources and the requirements of the OSHA regulation are beyond the capability of the Company, contracting the confined space entry work to a qualified entity that has this capability is highly recommended to ensure the health and safety of the Company's workers is protected.*

The effectiveness of this program depends on **proactive engagement and communication** of construction site management and employees. Before work begins at a construction site, each employer must ensure that a competent person identifies all confined spaces in which one or more of the employees it directs may work and identifies each space that is a permit space, through consideration and evaluation of the elements of that space, including testing as necessary.

If any employer conducting work on a construction site decides that employees it directs will enter a permit space, that employer (Entry Employer) must have a written permit space program implemented at the construction site. A written program, as outlined here, must be made available prior to and during entry operations for inspection by employees and their authorized representatives.

Interaction and information sharing with client facility representatives, general contractors and all related trade contractors is critical to this construction confined space process since hazards may be part of the jobs, tasks, and processes being completed by these multi-employer work environments. Clients may have confined spaces in their facilities or on active construction sites and it is important the Company work closely with these related organizations to identify these areas and take proper precautions.

This program (and the OSHA standard) is dependent upon the Controlling Contractor, rather than the Host Employer or Entry Employer, be the primary point of contact for information about permit spaces at the work site. The Host Employer must provide information it has about permit spaces at the work site to the Controlling Contractor, who then passes it on to the employers whose employees will enter the spaces (deemed "Entry Employers").

Likewise, Entry Employers must give the Controlling Contractor information about their entry program and hazards they encounter in the space and the Controlling Contractor passes that information on to other Entry Employers and back to the Host Employer.

The Controlling Contractor is also responsible for making sure employers outside a space know not to create hazards in the space and that Entry Employers working in a space at the same time do not create hazards for one another's workers.

**Note:** *If there is no Controlling Contractor, the Host Employer or another employer will perform these duties; or if the Controlling Contractor owns or manages the property, then it is both a Controlling Contractor also serves as the Host Employer.*

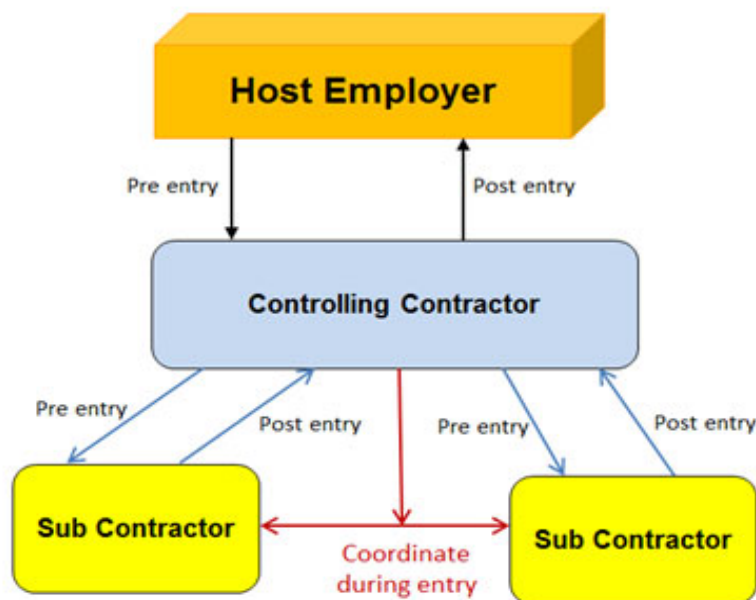

Before entry operations begin, the Controlling Contractor must:

- Obtain the Host Employer's information about the permit space hazards and previous entry operations; and
- Provide the following information to each entity entering a permit space and any other entity at the worksite whose activities could foreseeably result in a hazard in the permit space:
  - The information received from the Host Employer;
  - Any additional information the Controlling Contractor has about the subjects the Host Employer is responsible for listed above; and
  - The precautions that the Host Employer, Controlling Contractor, or other Entry Employers implemented for the protection of employees in the permit spaces.

If the workplace contains one or more permit spaces, the Host Employer responsibilities include:

- Before entry operations begin, the Host Employer must provide the following information to the Controlling Contractor if available:
  - The location of each known permit space and inform exposed employees by posting signs reading "DANGER – PERMIT REQUIRED CONFINED SPACE, DO NOT ENTER" providing sufficient notification of the existence and location of, and danger posed by each permit space.
  - Inform, in a timely manner and in a manner other than posting, its employees' authorized representatives and Controlling Contractor of the existence and location of, and the danger posed by, each permit space.
  - The hazards or potential hazards in each space or the reason it is a permit space; and
  - Any precautions that the Host Employer or any previous Controlling Contractor or Entry Employer implemented for the protection of employees in the permit space.

The following diagram should help to illustrate this flow of communication requirements, their assigned responsibilities within this program and the critical relationships between these key roles.

The Company Safety Manager is responsible for:

- Providing oversight and technical support,
- Securing the resources necessary to implement this program;
- Ensuring that routine safety checks of work operations are performed;
- Conducting an annual review of this program;
- Updates (as needed) to ensure the effectiveness of the program; and,
- Ensuring that proper reporting and record keeping is executed.

**The Entry Supervisor is the Company *qualified person*** (such as the site supervisor, foreman, or crew chief) responsible for determining if acceptable entry conditions are present at a permit space where entry is planned, for authorizing entry and overseeing entry operations, and for terminating entry as required by this standard. **Note:** An entry supervisor may also serve as an attendant or as an authorized entrant, as long as that person is trained and equipped as required by this standard for each role he or she fills. Also, the duties of entry supervisor may be passed from one individual to another during the course of an entry operation.

Specifically, the Entry Supervisor is responsible for:

- Assessing the space prior to entry to determine if the space meets the characteristics of a permit-required confined space;
- Knowing space hazards including information on the mode of exposure, signs, or symptoms and consequences of exposure;
- Verifying emergency plans and specified entry conditions such as permits, tests, procedures, equipment, and availability of rescue services before allowing entry;
- Terminating entry and canceling permits when entry operations are complete or if a new condition exists;
- Taking appropriate measures to remove unauthorized entrants; and,
- Ensuring that entry operations remain consistent with the entry permit and acceptable entry conditions are maintained.

The Authorized Entrant is the properly trained employee who has been authorized by the Entry Supervisor to enter a permit space. Specifically, the Authorized Entrant is responsible for:

- Knowing the hazards that may be faced during entry, including information on the mode, signs, or symptoms, and consequences of the exposure;
- Properly using equipment as required;
- Communicating with the Attendant during the entry so that the Attendant can monitor the status of the entry;
- Exiting from the permit space as soon as possible when ordered by the Attendant, when the entrant recognizes the warning signs or symptoms of exposure exists, when a prohibited condition exists, or when an automatic alarm is activated; and,
- Alert the Attendant immediately when a prohibited condition exists or when warning signs or symptoms of exposure exist.

The Attendant is an individual stationed outside one or more permit spaces who assesses the status of authorized entrants and who must perform the following duties:

- Is familiar with and understands the hazards that may be faced during entry, including information on the mode, signs or symptoms, and consequences of the exposure;
- Is aware of possible behavioral effects of hazard exposure in authorized entrants;
- Continuously maintains and ensures an accurate count of Authorized Entrants in the permit space;
- Remains outside the permit space during entry operations until relieved by another attendant; Note: Once an Attendant has been relieved by another Attendant, the relieved attendant may enter a permit space to attempt a rescue when the employer's permit space program allows attendant entry for rescue and the Attendant has been trained and equipped for rescue operations.
- Communicates with authorized entrants as necessary to assess entrant status and to alert entrants of the need to evacuate the space;
- Assesses activities and conditions inside and outside the space to determine if it is safe for entrants to remain in the space and orders the Authorized Entrants to evacuate the permit space immediately under any of the following conditions:
  - If there is a prohibited condition;
  - If the behavioral effects of hazard exposure are apparent in an authorized entrant;
  - If there is a situation outside the space that could endanger the authorized entrants;
  - or
  - If the Attendant cannot effectively and safely perform all the duties as required under this standard;
- Summons rescue and other emergency services as soon as the Attendant determines that authorized entrants may need assistance to escape from permit space hazards;
- Takes the following actions when unauthorized persons approach or enter a permit space while entry is underway:
  - Warns the unauthorized persons that they must stay away from the permit space;
  - Advises the unauthorized persons that they must exit immediately if they have entered the permit space; and
  - Informs the Authorized Entrants and the entry supervisor if unauthorized persons have entered the permit space;
- Performs non-entry rescues as specified by the employer's rescue procedure; and
  - Performs no duties that might interfere with the Attendant's primary duty to assess and protect the Authorized Entrants.

### Confined Space Entry Permit

This permit must remain at job site until the entry is completed

Project Address: \_\_\_\_\_ Project No: \_\_\_\_\_  
 Space Description: \_\_\_\_\_ Date: \_\_\_\_\_  
 Purpose of Entry: \_\_\_\_\_ Time of Entry: \_\_\_\_\_  
 Entry Supervisor: \_\_\_\_\_ Time Expires: \_\_\_\_\_  
 Hazards and Controls \_\_\_\_\_ Check here if NO HAZARDS are Present: ☐

| Atmospheric Hazards (check if present)                     |  | Controls Required (check if required)  |  |
|--|--|--|--|
| Oxygen levels below 19.5%                                  |  | Initial testing (O <sub>2</sub> , LEL, CO, H <sub>2</sub> S)   |  |
| Oxygen levels above 23.5%                                  |  | Continuous monitoring (O <sub>2</sub> , LEL, CO, H <sub>2</sub> S)   |  |
| Flammable/combustible gases, vapors or dust (specify):     |  | Other testing* (specify type and duration):  |  |
| Toxic gases, vapors or dust (specify):                     |  | Ventilation – Blower w/ sufficient duct length   |  |
| Pressurized atmosphere                                     |  | Air purifying respirator (circle)  |  |
| Other (specify):   |  | Mask type: Half-face Full-face<br>Cartridge: P100 Combo P100/organic vapor<br>Other (specify):   |  |
| Configuration Hazard (specify):                            |  | Lines Broken-Capped or Blanked   |  |
| Engulfment Hazard (specify):                               |  | Purge-Flush and Vent   |  |
| Shock hazard/electrocution                                 |  | Lockout De-energize-Tested and Verified  |  |
| Slips, trips, falls (specify):                             |  | If Early Warning System is required, is it installed and operational:  |  |
| Moving parts (specify):                                    |  | Lighting (Explosion Proof)   |  |
| Connecting pipes, drains, ducts (specify):                 |  | Form of Communication (circle):<br>Voice Radio Other:  |  |
| Biological hazard (specify):                               |  | Visual Contact with Attendant  |  |
| Other (specify):   |  | Ground Fault Circuit Interrupter   |  |
| Person Protective Equipment (check if required)            |  | Rescue / Retrieval (check if required)   |  |
| Safety glasses / goggles (circle one)                      |  | Full body harness  |  |
| Hearing protection   |  | Retrieval tripod with winch  |  |
| Hard hat   |  | Lanyard and lifeline   |  |
| Steel-toed/steel shank shoes                               |  | Coordination with Responsible Person   |  |
|  |  | Coordination with local EMS and verify EMS is available the entire duration of the entry operation. If EMS become unavailable, require immediate notification and suspend entry operations until EMS becomes available |  |
| Disposable coveralls (Tyvek)                               |  | SCBA available for rescue  |  |
| Shoe covers  |  | Other (specify):   |  |
| Gloves (circle):<br>Disposable Chemical Protective Leather |  |  |  |
| Face shield  |  | Fire Extinguisher  |  |
| Other (specify):   |  |  |  |

### Atmospheric Testing

Test Interval (circle): Initial      Prior to Each Entry      Continuous

Tester's Name: \_\_\_\_\_

|                  | Time of Test              |              |        |        |        |        |        |        |
|------------------|---------------------------|--------------|--------|--------|--------|--------|--------|--------|
|                  | Initials of Tester        |              |        |        |        |        |        |        |
| Parameter        | Acceptable Entry Criteria | Initial Test | Test 2 | Test 3 | Test 4 | Test 5 | Test 6 | Test 7 |
| % Oxygen         | 19.5% to 23.5%            |              |        |        |        |        |        |        |
| % LEL*           | Less than 5%              |              |        |        |        |        |        |        |
| Carbon Monoxide  | Less than 25 ppm          |              |        |        |        |        |        |        |
| Hydrogen sulfide | Less than 10 ppm          |              |        |        |        |        |        |        |
|                  |                           |              |        |        |        |        |        |        |
|                  |                           |              |        |        |        |        |        |        |
|                  |                           |              |        |        |        |        |        |        |
|                  |                           |              |        |        |        |        |        |        |

List other gases or parameters to be tested in blank fields.

Was evacuation of space required at any time?      \_\_ YES      \_\_ NO

If so, why? \_\_\_\_\_

Time of evacuation: \_\_\_\_\_ Time of re-entry: \_\_\_\_\_

Controls or actions taken to correct reason for evacuation: \_\_\_\_\_

| Testing Instrument Used | Manufacturer | Serial No. | Date of Last Calibration |
|-------------------------|--------------|------------|--------------------------|
|                         |              |            |                          |
|                         |              |            |                          |

### Permit Authorization

I certify that I have reviewed the permit, understand the hazards that are or may be present, and have verified that the appropriate controls have been implemented. I understand the procedures necessary to ensure safe entry. No entry can be initiated until this permit is completed and signed by all Entrants, Attendants and the Entry Supervisor.

#### Authorized Entrants

**PERMIT CLOSED AT:** Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

## Electrical Safety

The person(s) responsible for electrical safety on this project are;

---

**Electrical Contractor:** \_\_\_\_\_

The Hazardous Energy Control Policy must include all known and potential energy sources, including but not limited to;

- electrical
- pneumatic
- plumbing and steam

All electrical power is considered to be **energized** until the responsible electrician or appropriate **competent** person has **verified** and **tested** the system to make sure that it has been **de-energized**.

- The electrical safety program for this project shall include the effective management of the following;

### Electrical Cords

- **Must be protected from physical damage**
  - flexible cords must be free of damage, splices and taps
  - flexible cords shall be properly maintained and stored
  - twisted cords shall be removed from service and destroyed to prevent future use
  - free of splices
  - flexible cords should not be so placed that they are considered a trip and fall hazard
  - flexible cords shall have the appropriate grounding pins, or shall be double-insulate

### Lighting

- shall be adequate for the job site and per specifications.
- lighting shall be of the appropriate wattage, and placed in fixtures, including temporary in a manner specified by the lighting manufacturer
- emergency lighting is required if work on the project will extend to after daylight hours
- emergency lighting is required for below grade areas of the project and other areas where natural lighting is not available, in the event of a power failure

### Power Tools

- portable electrical equipment and tools must be grounded or double insulated
- the tools shall be free of damage, and if not removed from service

- Any power tool removed from service, because of damage, shall be labeled "Do Not Use."

### **Ground Fault Circuit Interrupters (GFCI)**

- GFCI protected equipment and tools can be accomplished by one of the following;
- a GFCI outlet
- an outlet protected by a GFCI breaker, or
- a portable GFCI pigtail
- GFCI protection for all power tools and flexible cords is required for the duration of the project.
- When permanent wiring for the building / project or site has been completed, GFCI protection shall still be required. All contractors on site shall either;
- obtain power from a permanently wired GFCI protected outlet, or
- utilize a GFCI adapter / pigtail between the power supply and the flexible cord or tool being used

### **Lock-Out / Tag-Out**

- As part of the Hazardous Energy Control Policy, "The Joint Venture" must have a written Lockout / Tag out program on site.
- The Lockout / Tag out program shall take all types of hazardous energy into consideration.
- For this project, the following systems will need to be part of the Lockout /

**Chemical**

**Electrical**

**HVAC**

**Plumbing**

**Pneumatic**

**Steam**

**Other(s)**

*Check off or otherwise identify all forms of energy that apply to the project*

- “The Joint Venture” can default to the electrical contractor’s lockout / tagout program.
- As part of the Hazardous Energy Control Policy, “The Joint Venture” must identify the Lockout / Tagout program that will be used on site. This program, typically the most stringent shall be used by all of the contractors working on site, and shall incorporate the owners Hazardous Energy Program, as the owner will most likely be part of a hazardous energy control / shutdown.
- For this project, “The Joint Venture” will use and train to the Hazardous Energy Control Policy of:

☐ **General Contractor**

☒ **Electrical Sub-Contractor**

**Owner**

☐ \_\_\_\_\_

*Check off the appropriate program to be used for this project*

## Trenching and Excavation

### GENERAL REQUIREMENTS

Protection of employees is required against cave-ins except when the excavation is in stable rock or less than five feet deep and where examination by a competent person provides no evidence that a cave-in should be expected; and against falling rock, soil or other material, by use of scaling to remove loose rock or soil

Material or equipment must be kept at least two feet from the edge of the trench

Daily inspection of excavations and adjacent areas by a competent person, and removal of exposed employees if evidence of possible cave-ins, failure of protective systems, hazardous atmospheres or other hazardous conditions, until necessary precautions have been taken

A competent person means one who is capable of identifying existing and predictable hazards in the surroundings, or working conditions which are unsanitary or dangerous to employees and, and who has the authority to take immediate corrective action or measures to eliminate them

Ramps, runways, ladders or stairs as a means of access or egress must be within 25 feet of an employee work area if a trench is four feet deep or more

Support systems such as shoring, bracing, or underpinning to ensure the stability of adjacent structures such as buildings, walls or sidewalks

The standard allows an employer to use a trench box or shield that is either designed or approved by a registered professional engineer (R.P.E.) or is based on tabulated data by an R.P.E

The standard allows construction workers to remain inside trench shields that are being repositioned, provided that the shields are moved horizontally only and the shields are not stable and level on a flat surface.

**FIGURE V:2-12. SLOPE AND SHIELD CONFIGURATIONS.**

□ **SLOPING AND BENCHING**

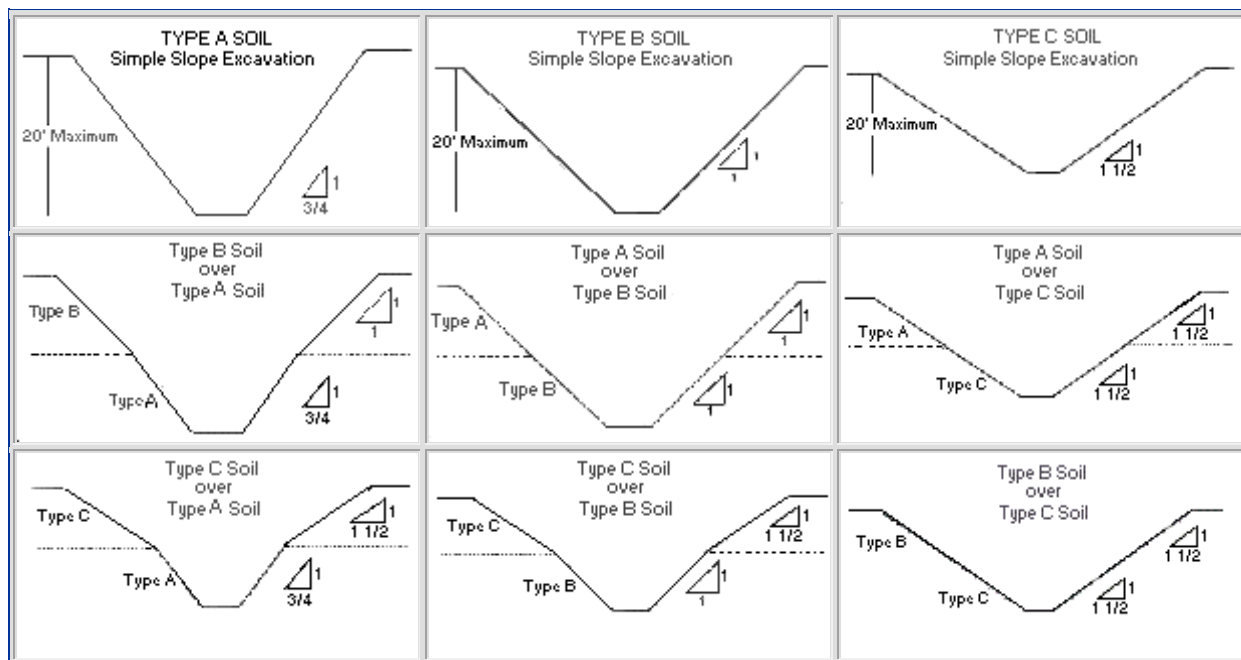

- A. **Sloping.** Maximum allowable slopes for excavations less than 20 ft (6.09 m) based on soil type and angle to the horizontal are as follows:

**TABLE V:2-1. ALLOWABLE SLOPES.**

| Soil type           | height/Depth ratio | Slope angle |
|---------------------|--------------------|-------------|
| Stable Rock         | Vertical           | 90°         |
| Type A              | $\frac{3}{4}:1$    | 53°         |
| Type B              | 1:1                | 45°         |
| Type C              | $1\frac{1}{2}:1$   | 34°         |
| Type A (short-term) | $\frac{1}{2}:1$    | 63°         |

(For a maximum excavation depth of 12 ft)

**FIGURE V:2-13. SLOPE CONFIGURATIONS: EXCAVATIONS IN LAYERED SOILS.**

**SPECIAL HEALTH AND SAFETY CONSIDERATIONS**

- A. **Competent Person.** The designated competent person should have and be able to demonstrate the following:

- Training, experience, and knowledge of:
  - soil analysis;
  - use of protective systems; and
  - requirements of 29 CFR Part 1926 Subpart P.
- Ability to detect:
  - conditions that could result in cave-ins;
  - failures in protective systems;
  - hazardous atmospheres; and
  - other hazards including those associated with confined spaces.
- Authority to take prompt corrective measures to eliminate existing and predictable hazards and to stop work when required.

**B. Surface Crossing of Trenches.** Surface crossing of trenches should be discouraged; however, if trenches must be crossed, such crossings are permitted only under the following conditions:

- Vehicle crossings must be designed by and installed under the supervision of a registered professional engineer.
- Walkways or bridges must be provided for foot traffic. These structures shall:
  - have a safety factor of 4;
  - have a minimum clear width of 20 in (0.51 m);
  - be fitted with standard rails; and
  - extend a minimum of 24 in (.61 m) past the surface edge of the trench.

**C. Ingress and Egress.** Access to and exit from the trench require the following conditions:

- Trenches 4 ft or more in depth should be provided with a fixed means of egress.
- Spacing between ladders or other means of egress must be such that a worker will not have to travel more than 25 ft laterally to the nearest means of egress.
- Ladders must be secured and extend a minimum of 36 in (0.9 m) above the landing.
- Metal ladders should be used with caution, particularly when electric utilities are present.

**D. Exposure to Vehicles.** Procedures to protect employees from being injured or killed by vehicle traffic include:

- Providing employees with and requiring them to wear warning vests or other suitable garments marked with or made of reflectorized or high-visibility materials.
- Requiring a designated, trained flagperson along with signs, signals, and barricades when necessary.

**E. Exposure to Falling Loads.** Employees must be protected from loads or objects falling from lifting or digging equipment. Procedures designed to ensure their protection include:

- Employees are not permitted to work under raised loads.
- Employees are required to stand away from equipment that is being loaded or unloaded.
- Equipment operators or truck drivers may stay in their equipment during loading and unloading if the equipment is properly equipped with a cab shield or adequate canopy.

**F. Warning Systems for Mobile Equipment.** The following steps should be taken to prevent vehicles from accidentally falling into the trench:

- Barricades must be installed where necessary.
- Hand or mechanical signals must be used as required.
- Stop logs must be installed if there is a danger of vehicles falling into the trench.
- Soil should be graded away from the excavation; this will assist in vehicle control and channeling of run-off water.

**G. Hazardous Atmospheres and Confined Spaces.** Employees shall not be permitted to work in hazardous and/or toxic atmospheres. Such atmospheres include those with:

- Less than 19.5% or more than 23.5% oxygen;
- A combustible gas concentration greater than 20% of the lower flammable limit; and
- Concentrations of hazardous substances that exceed those specified in the *Threshold Limit Values for Airborne Contaminants* established by the ACGIH (American Conference of Governmental Industrial Hygienists).

All operations involving such atmospheres must be conducted in accordance with OSHA requirements for occupational health and environmental controls (see Subpart D of 29 CFR 1926) for personal protective equipment and for lifesaving equipment (see Subpart E of 29 CFR 1926). Engineering controls (e.g., ventilation) and respiratory protection may be required.

When testing for atmospheric contaminants, the following should be considered:

- Testing should be conducted before employees enter the trench and should be done regularly to ensure that the trench remains safe.
- The frequency of testing should be increased if equipment is operating in the trench.
- Testing frequency should also be increased if welding, cutting, or burning is done in the trench.

Employees required to wear respiratory protection must be trained, fit-tested, and enrolled in a respiratory protection program. Some trenches qualify as confined spaces. When this occurs, compliance with the Confined Space Standard is also required.

H. **Emergency Rescue Equipment.** Emergency rescue equipment is required when a hazardous atmosphere exists or can reasonably be expected to exist. Requirements are as follows:

- Respirators must be of the type suitable for the exposure. Employees must be trained in their use and a respirator program must be instituted.
- Attended (at all times) lifelines must be provided when employees enter bell-bottom pier holes, deep confined spaces, or other similar hazards.
- Employees who enter confined spaces must be trained.

I. **Standing Water and Water Accumulation.** Methods for controlling standing water and water accumulation must be provided and should consist of the following if employees are permitted to work in the excavation:

- Use of special support or shield systems approved by a registered professional engineer.
- Water removal equipment, i.e. well pointing, used and monitored by a competent person.
- Safety harnesses and lifelines used in conformance with 29 CFR 1926.104.
- Surface water diverted away from the trench.
- Employees removed from the trench during rainstorms.
- Trenches carefully inspected by a competent person after each rain and before employees are permitted to re-enter the trench.

J. **Inspections.** Inspections shall be made by a competent person and should be documented. The following guide specifies the frequency and conditions requiring inspections:

- Daily and before the start of each shift;
- As dictated by the work being done in the trench;
- After every rainstorm;
- After other events that could increase hazards, e.g. snowstorm, windstorm, thaw, earthquake, etc.;
- When fissures, tension cracks, sloughing, undercutting, water seepage, bulging at the bottom, or other similar conditions occur;
- When there is a change in the size, location, or placement of the spoil pile; and
- When there is any indication of change or movement in adjacent structures.

|   |                 |                              |                    |   |  |
|---|-----------------|------------------------------|--------------------|---|--|
| <b>LOCATION:</b>  |                 |                              |                    | <b>DATE:</b>  |  |

## **Scaffold Safety Highlights**

1. Only qualified persons should design, build or inspect scaffolds. Each application must be planned to ensure that the scaffolding conforms to all specified assembly requirements.
2. Lean to scaffolds and makeshift platforms are prohibited.
3. Only materials currently being used should be stored on scaffolds. Materials are to be placed over cross members at all times. All materials should be removed from the scaffold nightly.
4. All scaffolds should be designed to carry four times the maximum intended load. At no time, should the scaffold be overloaded. Unstable objects such as barrels, boxes, and loose bricks should not be used to support scaffolds.
5. All scaffolds over ten feet high are required to have load footprints and limits that can be obtained from the scaffold manufacturer. A copy of all load footprints and limits should be given to any supplier stocking material on the scaffold.
6. All scaffolds must be maintained in safe condition and scaffolds damaged or weakened must be replaced immediately.
7. Scaffolds more than ten feet above the ground must have standard guardrails and toe boards attached.
8. Scaffolds should be braced and tied horizontally and vertically at intervals according to specified regulations.
9. Scaffolds with any dimension less than 45 inches should be equipped with outriggers or secured and guarded with standard four feet high railings.
10. Mobile scaffolds should be equipped with guardrails, midrails, toe boards, and outriggers.
11. All casters should be locked. Mobile scaffolds should not be used if there is a change in the floor level elevation.
12. Scaffold tags should be completed and attached to each scaffold prior to it being used.
13. Safe access must be available to each working level at all times. Workers should never climb a scaffold's cross bracing. Both hands should be free of tools/materials when ascending or descending a scaffold. Employees should not propel themselves while working on scaffolds.
14. At the start of each shift, a competent person should inspect each scaffold for requirements of the standard and as needed.
15. Adjusting or leveling screw jacks must not be extended more than 12 inches of thread.
16. Swinging stages boatswain chains, floats and needle beams require special approval by a safety representative before use plus require independent life lines and required training.
- 17. All persons occupying scaffold must have scaffold user training.**
18. All scaffold components must be inspected prior to installation

## Fall Protection

In accordance with the requirements of OSHA 29 CFR 1926.500, **all employers are required to provide fall protection equipment and training to their employees when working at elevations is 6' or more, above a lower level**, which includes but is not limited to the ground, platforms, roof or dangerous equipment. Each subcontractor on this project is responsible for their employees, as well as to be sure the sub-contractor has a written fall protection program and a competent person, and shall have a "competent person" on-site at all times.

For this project, the following work activities and fall protection height requirements are;

|                                |    |
|--------------------------------|----|
| <b>General Fall Protection</b> | 6' |
| <b>Excavations</b>             | 6' |
| <b>Scaffolding / Staging</b>   | 6' |
| <b>Roof Work</b>               | 6' |

For work on the roof, the contractor will utilize the following safety practices;

|   |                                  |   |                   |   |                      |   |
|---|----------------------------------|---|-------------------|---|----------------------|---|
| — | <b>Fall Protection Equipment</b> | — | <b>Guardrails</b> | — | <b>Warning Lines</b> | — |
|---|----------------------------------|---|-------------------|---|----------------------|---|

Guardrails shall be at least 42" in height (+/- 3") with mid rails and toe boards in place. If materials are placed on the elevated surfaces, higher than the level of the toe board, a protective measure shall be attached to the elevated surface (guardrail system) to prevent the storage from being displaced, over the edge of the toe boards. If the protective measure used is netting/screening or similar attached to the guardrail system is used on the exterior scaffold / staging, its use must be approved of by a "competent person" for the scaffolding / staging company and the local fire department for fire rating.

All wall openings, including windows with elevation differences >6' shall be properly protected with suitable guardrails or other recognized fall protection systems. When holes or openings are used for the passage of materials, such as through a window or elevated level of scaffolding/staging, the opening must be guarded on at least 3 sides when being used for the transfer of materials, and the 4th side, when not being used should be protected with a suitable (removable) guardrail or gate as specified by the competent person.

Guardrails are required around points of access, such as a ladder-way. The open side of the opening shall have a gate, or be off-set to prevent person(s) from falling through or into the opening. When the use of ladders or stilts are required that places the user above the level of fall protection, the competent person shall select an appropriate means of fall protection to cover the increase in height.

Options include the use of harness and lifelines, extending the guardrail system up, or placing the workers in a guardrail system in an elevated platform. When using warning lines for fall protection, in place of guardrail systems, the warning lines must be;

- Rigged and supported to a height of 39' Rigged and supported to a height of 39 – 45"
- the lowest point is 34' the lowest point is 34" – 39"
- be flagged every 6'

Fall Protection Equipment including, but not limited to harnesses, lanyards, deceleration devices, anchors, straps and other fall protection equipment shall be:

Inspected by a competent person before each use for damage and deficiencies

- Any fall protection equipment that has been damaged, must be removed from service and labeled out-of-service.
- Kept clean and placed in suitable containers to prevent exposure to abuse, damage and adverse environmental conditions.
- Holes  $\geq 2$ " (inches) in diameter in a walk or work area must be covered or otherwise protected to prevent items, materials and tools from falling through.
- The hole cover must be labeled "HOLE" or "COVER"
- All ramps, stairs and walkways, including those that are temporary are required to have hand / guard rails on both sides if there are  $\geq 3$  steps, or a drop of  $\geq 6'$ .

### Roof Work

- All roof work which is greater than 6' above a lower level is required to have fall protection, including flat and low-slope roofs.
- A competent person must identify the appropriate means of fall protection to be used, for the work being performed.

For this project, the roof slopes are:

### No Slope (Flat)

☐  $< 4:12$     ☐  $> 4:12, < 6:12$     ☐  $> 6:12, < 8:12$     ☐  $\geq 8:12$

the use of the following types of fall protection will be required:

**Controlled Access Zones**

**Guardrails**

**Monitor(s)**

☐ **Scaffold/Staging**

**Warning Lines**

☐ **Other:**

**For this project the use of a roof monitor**

is  
permitted

is not  
permitted

If a roof monitor is used as fall protection, the roof must be flat (no pitch) and less than 50' in length and width, the monitor is not permitted to perform any work, shall wear a reflective vest or blue hard hat and shall not permit any equipment to be running during the roof work.

**Warning lines, if used on the roof for fall protection must:**

- be placed at least 6' back from the roofs edge,
- be flagged every 6' in contrasting color,
- not be permitted (at any point) to be lower than 34" above the roof, and
- be able to withstand a force of 16 lbs. applied at the stanchions

No person, unless actually performing work between the warning line and the roofs edge is permitted outside of the warning line.

## **FIRE PREVENTION**

Whenever the fire detection system must be altered, shut-down or removed from service, the local fire department shall be notified in advance.

- “The Joint Venture” shall also notify the owner and verify notification of the owner's insurance company.

In the event of a fire alarm, all persons within the building are required to evacuate as referenced in the Emergency Action Program section referenced at the beginning of the site specific environmental health and safety program.

### **Fire Extinguishers**

Extinguishers shall be conspicuously placed in appropriate areas of the construction or project site. As a minimum, a suitable (code compliant) extinguisher must be placed at;

- each EXIT door on all floors
- within 25' of all hot work activities and operations, as well as on each welding cart
- no greater than 100 feet between units

Fire Extinguishers on site shall have the following;

- annual (in date) inspection tag
- a gauge indicating fully charged, and
- pin with security seal

**Fire extinguishers shall only be used by personnel who have been trained to use this equipment**

**Persons without training shall evacuate the building**

**In the event of a fire emergency, regardless of size, the following shall occur;**

- Notify person(s) within the immediate vicinity of the fire, and request that they evacuate.
- Leave the area or room, and if possible close the door to the room
- Activate the closest fire alarm pull station, which is typically located next to the stairs or exit door.
- From a safe location, such as outside by cell phone, dial the local emergency number or 911 and report the emergency.
- If the above requirements have been completed, you are trained, and you are comfortable with the size of the fire and the use of the extinguisher, then attempt to extinguish the fire, but do not place yourself at risk.
- Report all fires, and complete the appropriate incident reports. Return any damaged, defective, discharged or outdated extinguisher to the project superintendent for replacement.

## **Fire Suppression**

The fire suppression systems (sprinkler, standpipe or other specialized system) shall be installed and maintained in accordance with the requirements of the Massachusetts State Building Code, 780 CMR 9.

- For alterations and renovations, existing sprinklers and/or standpipes must remain in place and operational until it is absolutely necessary to remove parts thereof.
- Whenever the fire suppression system must be altered, shut-down or removed from service, the local fire department shall be notified in advance.

## **HEATING EQUIPMENT**

- Heating equipment used on site shall meet the requirements of OSHA 29 CFR 1926.53; 1926.154 and the local and state fire prevention regulations.
  - Permits are required for the use of salamanders and other heating equipment that utilize natural gas and/or propane.
    - Propane gas tanks and cylinders require;
      - permits for the storage and use of gas
      - a suitable base
      - gas cylinders require a chain or strap to secure
  - No flammable or combustible gases or liquids, or open flames can be located near any means of egress on a construction site. If heaters are located in close proximity to a door, the fuel supplying same shall be a minimum of 25' from the door.
  - When heating devices are utilized on site, which require combustible fuels, including coal, fuels, gases and wood, an approved carbon monoxide detector shall be used to verify that levels are carbon monoxide do not exceed 30ppm.
  - L.P.G. Cylinders must be protected by contact with motorized vehicles.
  - Non-vented open flame heaters will not be used.
  - No propane-type heating units will be used in an enclosed building.

## **Concrete and Masonry**

### **SCOPE AND APPLICATION**

The standard, Subpart Q, prescribes performance-oriented requirements designed to help protect all construction workers from the hazards associated with concrete and masonry construction operations at construction, demolition, alteration or repair worksites. Other relevant provisions in both general industry and construction standards (29 CFR Part 1910 and 1926) also apply to these operations.

### **GENERAL REQUIREMENTS**

Cleaning of masonry: No cleaning agents that contain acid shall be used.

#### **Construction Loads**

Employers must not place construction loads on a concrete structure or portion of a concrete structure unless the employer determines, based on information received from a person who is qualified in structural design, that the structure or portion of the structure is capable of supporting the intended loads.

#### **Reinforcing Steel**

All protruding reinforcing steel, onto and into which employees could fall, must be guarded to eliminate the hazard of impalement.

#### **Concrete Buckets**

Employees must not be permitted to ride concrete buckets.

#### **Working Under Loads**

Employees must not be permitted to work under concrete buckets while the buckets are being elevated or lowered into position.

To the extent practicable, elevated concrete buckets must be routed so that no employee or the fewest employees possible are exposed to the hazards associated with falling concrete buckets.

#### **Personal Protective Equipment**

Employees must not be permitted to apply a cement, sand, and water mixture through a pneumatic hose unless they are wearing protective head and face equipment.

Employees must not be permitted to place or tie reinforcing steel more than 6 feet above any adjacent working surfaces unless they are protected by the use of a safety belt or equivalent fall protection meeting the criteria in OSHA standards on Personal Protective and Life Saving Equipment (29 CFR 1926 Subpart E).

## **Equipment and Tools**

The standard also includes requirements for the following equipment and operations:

- Bulk cement storage,
- Concrete mixers,
- Power concrete trowels,
- Concrete buggies,
- Concrete pumping systems,
- Concrete buckets,
- Tremies,
- Bull floats,
- Masonry saws, and
- Lockout/tagout procedures.

## CAST-IN-PLACE CONCRETE

### General Requirements for Formwork

Formwork must be designed, fabricated, erected, supported, braced, and maintained so that it will be capable of supporting without failure all vertical and lateral loads that might be applied to the formwork. As indicated in the Appendix to the standard, formwork that is designed, fabricated, erected, supported, braced and maintained in conformance with Sections 6 and 7 of the *American National Standard for Construction and Demolition Operations - Concrete and Masonry Work* (ANSI A10.9-1983) also meets the requirements of this paragraph.

### Drawings or Plans

Drawings and plans, including all revisions for the jack layout, formwork (including shoring equipment), working decks and scaffolds, must be available at the jobsite.

### Shoring and Reshoring

All shoring equipment (including equipment used in reshoring operations) must be inspected prior to erection to determine that the equipment meets the requirements specified in the formwork drawings.

Damaged shoring equipment must not be used for shoring. Erected shoring equipment must be inspected immediately prior to, during, and immediately after concrete placement. Shoring equipment that is found to be damaged or weakened after erection must be immediately reinforced.

- Designed by a qualified designer and the erected shoring must be inspected by an engineer qualified in structural design,
- Vertically aligned,
- Spliced to prevent misalignment, and
- Adequately braced in two mutually perpendicular directions at the splice level. Each tier also must be diagonally braced in the same two directions.

Adjustment of single-post shores to raise formwork must not be made after the placement of concrete.

Reshoring must be erected, as the original forms and shores are removed, whenever the concrete is required to support loads in excess of its capacity.

### Reinforcing Steel

Reinforcing steel for walls, piers, columns, and similar vertical structures must be adequately supported to prevent overturning and collapse.

Employers must take measures to prevent unrolled wire mesh from recoiling. Such measures may include, but are not limited to, securing each end of the roll or turning over the roll.

### Removal of Formwork

- The plans and specifications stipulate conditions for removal of forms and shores, and such conditions have been followed, or
- The concrete has been properly tested with an appropriate American Society for Testing and Materials (ASTM) standard test method designed to indicate the concrete compressive strength, and the test results indicate that the concrete has gained sufficient strength to support its weight and superimposed loads.

Reshoring must not be removed until the concrete being supported has attained adequate strength to support its weight and all loads in place upon it.

### **Limited Access Zone is Required;**

- Equal to the height of the wall to be constructed plus 4 feet, and shall run the entire length of the wall;
- Restricted to entry only by employees actively engaged in constructing the wall; and
- Kept in place until the wall is adequately supported to prevent overturning and collapse unless the height of wall is more than 8 feet and unsupported; in which case, it must be braced. The bracing must remain in place until permanent supporting elements of the structure are in place.
- Workers not allowed under concrete buckets when being elevated or lowered.
- Workers must wear protective head, face, and eye equipment when placing concrete with a pneumatic hose.
- Manually guided concrete troweling machine must be equipped with automatic controls to shut off power when hands are removed.
- Compressed air hoses must be provided with positive fail-safe joint connectors.
- Concrete buckets must have positive safety features or similar devices to prevent accidental dumping.
- Tremie Sections must be secured with wire rope ( or equivalent materials) in addition to regular couplings or connections.
- Drawing or plans for the jack layout, framework, working decks, and scaffolds must be available on site.
- Shoring and Reshoring
  - Inspected prior to erection
  - Damaged equipment shall not be used
  - Inspected immediately prior to swing and immediately after concrete placement
  - Damaged equipment immediately removed from service
- No adjustments to single post shores to raise formwork made after placement of concrete
- Reshoring must be erected as original forms are removed

## **Precast Concrete**

### **SUMMARY**

OSHA's standard includes the following:

- Expands and toughens protection against masonry wall collapses by requiring bracing and a limited access zone prior to the construction of a wall;
- Permits employers to use several more recently developed methods of testing concrete instead of just the one currently recognized method; and
- Sets and clarifies requirements for both cast-in-place concrete and precast concrete during construction.

Compliance with the common-sense requirements of the OSHA standard discussed here should greatly reduce or eliminate the injuries and accidents that occur too frequently during concrete and masonry construction.

### **HOUSEKEEPING**

- Contractors are responsible for the overall housekeeping practices on the site.
- In the event contractors do not comply, the service will be subcontracted to others and the responsible contractor/ subcontractor may be back-charged.
- As a minimum, the aisles, exits and other parts of the means of egress shall be properly maintained and free of unnecessary storage and waste.
- Sawdust and other combustible materials such as cardboard and paper shall be removed daily to reduce the risk of injury and fire.
- Trip and fall hazards shall be removed as soon as possible, especially in areas considered to be walk / work surfaces
- Dumpsters  $\geq 6$  cubic yards in size, located on a construction site require a permit from the fire department.
  - The dumpster shall not be placed up against the building under construction, unless approved by the local fire department.
  - The dumpster, in accordance with the requirements of the building code shall be immediately emptied, when full.

Housekeeping practices on this project is extremely important. In order to reduce the risk of fire, prevent injuries and reduce the risk of a regulatory inspection, housekeeping must be maintained.

- Waste shall be discarded in a suitable container.
- Sawdust and rags should be placed in a metal (approved) container with tight (proper-fitting) lid.
- All waste containers (inside the building) shall be emptied at least daily.
- Corridors and other walk / work areas shall not be used for storage.

**Flammable / Combustible Liquids**

- Shall be placed in appropriate containers and cabinets.
- The cabinets and containers shall be NFPA compliant, as required by the local building and fire departments.
- Shall not be located in a means of egress or exit.
- Shall be labeled properly (without abbreviation). The name of the chemical and the appropriate hazard must appear on the “appropriate” container.

## Steel Erection (Subpart R)

### Requirements

In accordance with the requirements of OSHA, all employers are required to provide **fall protection**, equipment and training to their employees when working at elevations above a lower level, which includes but is not limited to the ground, platforms, structural steel members, roofs or dangerous equipment. Steel erectors on this project are responsible for their steel erection. Contractor and any subcontractor must have a written fall protection program and a competent person. A "competent person" must be on-site at all times.

### FALL PROTECTION REVIEW

Permanent floors shall be installed as soon as practical following the erection of structural members. At no time shall there be more than four floors or 48 feet of unfinished bolting or welding above the foundation or uppermost secured floor.

#### Temporary Flooring

The erection floor shall be solidly planked or decked over its entire surface except for access openings. Planking shall be not less than 2 inches thick, full size, undressed, and shall be laid tight and secured against movement.

#### Perimeter Protection

A safety railing of one-half inch diameter wire rope shall be installed and maintained approximately 42 inches (+/- 3"), around the periphery of all decked floors following the completion of structural steel erection on that floor. The distance between uprights should typically not exceed 8 feet. Wire rope must not deflect more than 3 inches under a downward force of 200 pounds. Wire rope clamps must be installed per the chart contained in Subpart R

#### Erection Plan

An erection plan consisting of the following items will be prepared and reviewed with the Project Manager prior to start of work.

#### General Requirements:

A qualified person shall approve all changes in the safety erection plan.  
A copy of the erection plan with all approved changes shall be maintained at the jobsite.  
The implementation of the erection plan shall be under the supervision of a competent person.

## **FALL PROTECTION**

Each employee engaged in a steel erection activity that is on a walking/working surface with an unprotected side or **edge 6 feet or greater above a lower level shall be protected from fall hazards by guardrail systems, safety net systems, personal fall arrest systems, positioning device systems or fall restraint systems.**

Bundles of sheets or small material shall be so secured as to prevent them from falling.

When setting structural steel, each piece shall be secured with not less than two bolts at each connection and drawn up wrench tight before the load is released.

Material shall not be hoisted to a structure unless it is ready to be put into place and secured.

When loads are being hoisted, all personnel are to be prevented from walking under the lift. No one shall be permitted to ride the load for any reason under any circumstances whatsoever.

A tag line shall be used to control loads.

For the protection of other crafts on the project, signs shall be posted in the erection area marked, "DANGER - MEN WORKING OVERHEAD."

"Christmas Tree" rigging, or the lifting of more than one member at one time shall conform to the requirements of Subpart R.

## Components of an Erection Plan

| Task   | Complete | Date |
|--|----------|------|
| The sequence of erection activity, developed in coordination with the controlling contractor, that includes the following: |          |      |
| Material deliveries (Schedule)   |          |      |
| Material staging and storage areas   |          |      |
| Coordination with other trades and construction activities.  |          |      |
| A description of the crane and derrick selection and placement procedures, including the following:                        |          |      |
| Site preparation;  |          |      |
| Path for overhead loads  |          |      |
| Critical lifts, including rigging supplies and equipment.  |          |      |
| A description of steel erection activities and procedures, including the following:  |          |      |
| Stability considerations requiring temporary bracing and guying;   |          |      |
| Erection bridging terminus point;  |          |      |
| Anchor rod (anchor bolt) notifications regarding repair, replacement and modifications;                                    |          |      |
| Columns and beams (including joists and purlins);  |          |      |
| Connections (ie: Double connections)   |          |      |
| Decking: Fall arrest, CDZ  |          |      |
| Ornamental and miscellaneous iron (Fall Arrest Method)   |          |      |
| A description of the fall protection procedures that will be used to comply with project requirements                      |          |      |
| A description of the procedures that will be used to comply with Falling object protection                                 |          |      |
| A description of the special procedures required for hazardous non-routine tasks.  |          |      |
| Training for performing steel erection operations as required  |          |      |
| A list of the qualified and competent persons.   |          |      |
| A description of the procedures that will be utilized in the event of rescue or emergency response.                        |          |      |
| (d) Other plan information. The plan:  |          |      |
| Includes the identification of the site and project; and   |          |      |
| Is signed and dated by the qualified person(s) responsible for its preparation and modification.                           |          |      |

## Subpart R

### What activities are covered?

#### Scope

1926.750

(a) This subpart sets forth requirements to protect employees from the hazards associated with steel erection activities involved in the construction, alteration, and/or repair of single and multi-story buildings, bridges, and other structures where steel erection occurs. The requirements of this subpart apply to employers engaged in steel erection unless otherwise specified. This subpart does not cover electrical transmission towers, communication and broadcast towers, or tanks.

Note to paragraph (a): Examples of structures where steel erection may occur include but are not limited to the following: Single and multi-story buildings; systems-engineered metal buildings; lift slab/tilt-up structures; energy exploration structures; energy production, transfer and storage structures and facilities; auditoriums; malls; amphitheaters; stadiums; power plants; mills; chemical process structures; bridges; trestles; overpasses; underpasses; viaducts; aqueducts; aerospace facilities and structures; radar and communication structures; light towers; signage; billboards; scoreboards; conveyor systems; conveyor supports and related framing; stairways; stair towers; fire escapes; draft curtains; fire containment structures; monorails; aerial ways; catwalks; curtain walls; window walls; store fronts; elevator fronts; entrances; skylights; metal roofs; industrial structures; hi-bay structures; rail, marine and other transportation structures; sound barriers; water process and water containment structures; air and cable supported structures; space frames; geodesic domes; canopies; racks and rack support structures and frames; platforms; walkways; balconies; atriums; penthouses; car dumpers; stackers/ reclaimers; cranes and craneways; bins; hoppers; ovens; furnaces; stacks; amusement park structures and rides; and artistic and monumental structures.

**(b)(1) Steel erection activities include hoisting, laying out, placing, connecting, welding, burning, guying, bracing, bolting, plumbing and rigging structural steel, steel joists and metal buildings; installing metal decking, curtain walls, window walls, siding systems, miscellaneous metals, ornamental iron and similar materials; and moving point-to-point while performing these activities.**

**(2) The following activities are covered by this subpart when they occur during and are a part of steel erection activities: rigging, hoisting, laying out, placing, connecting, guying, bracing, dismantling, burning, welding, bolting, grinding, sealing, caulking, and all related activities for construction, alteration and/or repair of materials and assemblies such as structural steel; ferrous metals and alloys; non-ferrous metals and alloys; glass; plastics and synthetic composite materials; structural metal framing and related bracing and assemblies; anchoring devices; structural cabling; cable stays; permanent and temporary bents and towers; false work for temporary supports of permanent steel members; stone and other non- precast concrete architectural materials mounted on steel frames; safety systems for steel erection; steel and metal joists; metal decking and raceway systems and accessories; metal roofing and accessories; metal siding; bridge flooring; cold formed steel framing; elevator beams; grillage; shelf racks; multi-purpose supports; crane rails and accessories; miscellaneous, architectural and ornamental metals and metal work; ladders; railings;**

**handrails; fences and gates; gratings; trench covers; floor plates; castings; sheet metal fabrications; metal panels and panel wall systems; louvers; column covers; enclosures and pockets; stairs; perforated metals; ornamental iron work, expansion control including bridge expansion joint assemblies; slide bearings; hydraulic structures; fascia's; soffit panels; penthouse enclosures; skylights; joint fillers; gaskets; sealants and seals; doors; windows; hardware; detention/security equipment and doors, windows and hardware; conveying systems; building specialties; building equipment; machinery and plant equipment, furnishings and special construction.**

For this project, the following work activities and fall protection height requirements are;

|                                |        |
|--------------------------------|--------|
| <b>General Fall Protection</b> | 6 Feet |
|--------------------------------|--------|

|                                     |        |
|-------------------------------------|--------|
| <b>Connectors / Deck Installers</b> | 6 Feet |
|-------------------------------------|--------|

Guardrails shall be at least 42" in height (+/- 3") with mid rails and toe boards in place. If materials are placed on the elevated surfaces, higher than the level of the toe board, a protective measure shall be attached to the elevated surface (guardrail system) to prevent the storage from being displaced, over the edge of the toe boards

All wall openings, including windows with elevation differences >6' shall be properly protected with suitable guardrails or other recognized fall protection systems. When holes or openings are used for the passage of materials, such as through a window or elevated level of scaffolding/staging, the opening must be guarded on at least 3 sides when being used for the transfer of materials, and the 4th side, when not being used should be protected with a suitable (removable) guardrail or gate as specified by the competent person.

Guardrails are required around points of access, such as a ladder-way. The open side of the opening shall have a gate, or be off-set to prevent person(s) from falling through or into the opening. When the use of ladders or stilts are required that places the user above the level of fall protection, the competent person shall select an appropriate means of fall protection to cover the increase in height.

## **Welding / Hot-Work**

Brazing, cutting, heating, soldering, welding and other spark producing work on this job requires the acquisition of a Hot Work Permit, as required by the local fire department and OSHA.

### **Hot Work Permit**

- The basic requirements of a Hot Work Permit are;
  - The area(s) in which the Hot Work will be performed must be inspected
  - All containers, pipes and tanks that were used for other than water or steam shall first be purged and cleaned
  - All combustible material shall be located at least 35' away from the Hot Work Area
  - Fire extinguishers must be of proper size and type for the Hot Work activity, and shall be located within 25' of the Hot Work Area
    - Exhaust ventilation or other smoke evacuation / neutralization system shall be used at the area of Hot Work to reduce employee exposure.

**A fire watch must be maintained for at least 1 hour after hot work has ended when inside of a structure or building.**

**Permits may be obtained.....**

## HOT WORK PERMIT

Company Name:

Date:

Work Location:

Type of Work:

Start Time:

Finish Time:

### CHECKLIST FOR HOT WORK

|  | Yes | No |
|--|-----|----|
| Person doing hot work has been trained in safe operation of equipment  |     |    |
| Appropriate PPE (eye protection, helmet, protective clothing, respirator, gloves, etc.) available                              |     |    |
| Welding flash screens will be used   |     |    |
| Charged, Inspected Fire extinguishers placed for immediate use   |     |    |
| Floors swept clean of combustible materials  |     |    |
| Combustible floors protected with fire-resistant shields   |     |    |
| Combustible materials and supplies moved away from hot work location or adequately covered.                                    |     |    |
| Wall and floor openings near work location have been covered   |     |    |
| Ignition source not to be used near flammable vapors or liquids, or containers that have contained flammable vapors or liquids |     |    |
| Fire hazards that can't be moved protected by appropriate means  |     |    |
|  |     |    |
|  |     |    |
| Equipment to be used is in good condition and inspected regularly  |     |    |
| On-site contractors advised of hot work  |     |    |
| Warning sign(s) posted to warn other workers   |     |    |
| If working in confined space, confined space permit has been issued  |     |    |
| Inspect work area after work is complete   |     |    |
| Maintain a fire watch during operations and for 30 minutes after work has been completed                                       |     |    |
|  |     |    |

Authorized Signature Date

For specific requirements, refer to General Industry Standards 1910.146, 1910.252, 1910.253, 1910.254, 1910.272, and Construction Standards 1926.803, 1926.350, 1926.352, 1926.343.

## **MATERIAL HANDLING AND STORAGE**

### **GENERAL**

When storing materials, do not leave materials in aisles, walkways, stairways, roads or other points of entry or exit. When moving or lifting materials by hand, avoid stress or strain.

Flammable liquids and grease shall be stored in a "No Smoking" area and properly separated from other stored material.

Each container will be identified as to its contents.

"Hitching a ride" on tractors, cranes, forklifts or other vehicles is dangerous. Ride in cab of truck or where seat is provided. Jumping on/off moving vehicle is prohibited.

### **STACKING**

Materials should be segregated as to kind, size and length, and placed in neat and orderly stacks that are racked, blocked or interlocked to prevent falling, collapsing or tripping hazards.

Stacks of materials will be arranged to allow passageways between them and be well marked and visible at night.

### **RIGGING**

Good rigging is essential for moving construction materials and equipment and at the same time keep them under control.

Never swing loads over the heads of workers in the area.

Only qualified flagmen and signalmen are to direct operation, using hand signals established as standard for the industry.

Use the correct lifting technique and utilize hoisting equipment or engage the help of a fellow worker whenever heavy or unwieldy objects are to be moved.

Use softeners where slings pass over sharp edges or corners.

\*Tag lines must be used to control loads and keep workers away.

Do not overload any part of your rigging. Check loads just off the ground for stability before hoisting. Insure that the center of gravity is directly below the hook.

Never leave a suspended load unattended until safely landed.

Never allow loads, booms, or rigging to approach within ten (10) feet of energized electrical lines rated 50 KV or lower unless the lines are de-energized. For lines rated greater than 50 KV or for moving loads, refer to O.S.H.A. Standards.

- Always operate cranes on firm, level ground or use mats, particularly for near-capacity lifts without-riggers.

Rope off or barricade a space 360 degree around all cranes operating on your jobsite to the extent of the swing radius of the rear of the rotating structure.

#### **Rigging and Sling Safety**

##### **1. Load Angle Factor - Choosing Slings**

To determine the safe working load:

- a. Length of leg (sling) divided by Height to Hook = Load Angle Factor
- b. Load Angle Factor multiplied by Weight of Load = Stress
- c. OR:  $10 \text{ ft.} \div 8 \text{ ft. to hook} = 1.25 \text{ Load Angle Factor}$
- d.  $1.25 \times 2000 = 2500 \text{ lbs...}$  each leg- Safe Working Load Rating for your slings

## 2. Wire Rope

- a. Made from preformed strands
- b. Better load distribution
- c. Prevents unraveling when cut
- d. More flexible
- e. Many uses
- f. Less susceptible to corrosion, overtension, wear and crushing

## 3. Wire Rope Construction

- a. Lay: Direction of winding of wires in strands and strands in rope. Usually, 2 basic lays, Regular Lay and Lang Lay
- b. Regular Lay - Wires are laid in one direction, strands are laid in opposite, Strong, withstands crushing and distortion due to short length of exposed wires
- c. Lang Lay – Wires and strands are laid in same direction. Used in multiple sling hoisting as it has a tendency to untwist

## 4. Synthetic Slings

- a. Available in nylon or polyester
- b. Nylon is resistant to many alkalis
- c. Polyester is resistant to many acids
- d. Polyester stretches only half as much as nylon
- e. Advantages to Synthetic Slings
- f. Width and texture prevent scratches
- g. Very flexible, mold to the shape of the load
- h. Not affected by moisture, no corrosion, non sparking
- i. Can absorb heavier shocks than other materials
- j. Available in a number of configurations

## 5. Slings

- a. Inspect daily for excessive wear
- b. Look for
  - i. Colored threads,
  - ii. Cuts, crushes, abrasions, melts
  - iii. Burns, chemical or heat
  - iv. Knots
- c. Dispose of all slings which show signs of wear. Do not keep them with usable slings.

## 6. Rigging Hardware – Hooks: carbon steel, alloy steel, bronze,

- a. Quenched and tempered
- b. Rated capacity permanently displayed

- c. Anchor Shackles: Screw pin, round pin, safety pin
  - d. Chain Shackles: Screw pin, round pin, safety pin
  - e. Turnbuckles, Eye Bolts, Clips, Load Binders, Chain Falls
7. Weight Determinations
- a. Use drawings, catalogs, bills of lading
  - b. Use information on the load, paint, plate, tagged
  - c. Weigh the load, scale, dynamometer, crane load scale
  - d. Calculate the weight
8. Center of Gravity –
- a. It's directly under the Hook
  - b. The point at which the object will balance
  - c. Locate CG, hook should be directly above it
  - d. If a load tilts when it is lifted, weight on one leg will increase, other will decrease
  - e. *Points of attachment should lie above the CG*

## **Stairways and Ladders**

- Only Type 1AA, Type 1A, Type 1, and Type 2 ladders shall be used on this project. Do not exceed the rated load capacity.
- All ladders shall be inspected before use, and shall be removed from service if broken, damaged or unsafe
  - The above referenced ladder must be tagged “Do Not Use” and reported to the supervisor by the person performing the inspection
  - Ladders shall not be painted or covered in any manner that will hide cracks and other defects
  - Ladders shall have all of the appropriate warning and danger labels in place, maintained in legible condition
- Ladders must be utilized in a manner specified by the manufacturer
- “The Joint Venture” shall determine the type of fall protection that shall be used when working with a ladder on the job site
  - Tying the ladder off, or having a person “spot” the ladder are possibilities
- The ladder must be the appropriate size and type for the work being performed
- Metal ladders shall not be used around electrical equipment such as power lines, transformers and electric panels

### Extension or Straight Ladders shall...

- be pitched at the required 4:1 ratio
- be tied or otherwise secured to the structure or elevated surface to prevent tipping or falling. Do not use the rope designed for adjusting the ladders height to secure the ladder.
- be extended at least 3 feet above the elevated surface to be accessed
  - The top 3 rungs of the extension, or straight ladder shall not be used as a step

### Fixed Ladders shall...

- be made and installed for the environment it is intended to serve
- be manufactured and installed in accordance with the ANSI Standard for Fixed Ladders
  - construction
  - elevations
  - fall protection
  - spacing from walls ( $\geq 7$ " from wall to rung)
- Both permanent and temporary fixed ladders
- be inspected by a “competent person” for structural integrity and general safety

### Job Made Ladders shall...

- be constructed in accordance with the requirements of OSHA and ANSI

### Step Ladders shall...

- be opened completely with spreaders locked in place

- not be used as straight ladders
- be tall enough to perform the necessary work
- The top 2 steps of a step ladder shall not be used for standing

## **LASERS**

- The contractors “competent Person(s)” is responsible for the use of Lasers on the job Site
- Lasers are regulated by their hazards. The laser(s) being used on his site are;

| <b>Class<br/>I</b> | <b>Class<br/>II</b> | <b>Class<br/>IIIa</b> | <b>Class<br/>IIIb</b> | <b>Class<br/>IV</b> |
|--------------------|---------------------|-----------------------|-----------------------|---------------------|
|--------------------|---------------------|-----------------------|-----------------------|---------------------|

- Class II and IIIa lasers are often found on construction sites for the purpose of aligning and leveling.
- In order to use a laser on a construction site, the employee must be properly trained, and have proof of training
- When the laser is not being actively used (breaks, lunch, or other extended periods of > 10 minutes) the laser shall be shut-off.
- The competent person must insure that all entrances to the work area where lasers are being used shall be labeled with the appropriate approved DANGER or WARNING signs that indicate that a Class II or IIIa laser is in use
  - Lasers must have appropriate labels, stickers and warnings affixed, which shall be maintained in good condition
  - Reflective surfaces, including mirrors shall not be located in areas where lasers are in use.
  - Specialized protective eyewear may be required

## **EQUIPMENT GUARDING**

- Machine guarding shall meet the requirements of OSHA
- All exposed blades shall be guarded to prevent accidental injury
- All belts and pulley’s will be protected with a suitable guard to prevent accidental contact
- All table saws shall have the appropriate blade guards, anti-kickback devices and push sticks
- The GC shall be responsible for determining what equipment shall have guards, and the appropriate guard for the equipment or machine.
  - Guards shall be used and installed in accordance with manufacturers specification

## **Permits Required**

**For this project, the following permits will be required;**

☐ **Air Quality  
for  
Demolition**

☐ **Asbestos**

☐ **Building**      ☐ Alteration      ☐ Construction      ☐ Demolition      ☐ Renovation

**Dig safe**

☐ **Dumpster**      ☐ ( $\geq$  6 cubic  
yards)

☐ **Electrical**

☐ **Excavation**

☐ **Fire  
Detection**

\_\_\_\_ **Fire  
Suppression**

☐ **Flammable  
Liquid**

☐ **Gas**      ☐ Natural      ☐ Propane

\_\_\_\_ **Hot Work**

\_\_\_\_ **Plumbing**

\_\_\_\_ **Salamanders**

\_\_\_\_ **Other(s):**

## **AERIAL LIFTS**

- Personnel lifts such as articulating booms, single person upright lifts (i.e. Genie, JLG and Uprights) and scissors lifts shall be used in a manner specified by the manufacturer, in accordance with the requirements of OSHA 29 CFR 1910.66.
- All articulating booms, including and truck mounted articulating booms are required to have personal fall protection equipment, consisting of approved full body harness and lanyards.
- Scissors Lifts, and Upright Lifts that are equipped with a guardrail system do not require the use of a full body harness and lanyard, as the cage (guardrail) is considered fall protection.
  - **Exception:** If manufacturers specifications or company policy indicate that the full body harness and lanyard (or similar) is required, the use of same shall be mandated.
- **Any person using a personnel lift must be properly trained, in accordance with manufacturer's specifications**
- All lifts shall bear the following manuals and warnings, in legible condition;
  - The operators manual shall be located on the lift at all times, for ease of reference
  - All danger and warning stickers shall be attached to the lift and shall be in legible condition
- Personnel lifts shall be inspected before each use, and must be removed from service if a deficiency is noted
  - All safety devices and related equipment shall be tested as part of the inspection for proper operation.
  - The lift, if damaged or otherwise impaired shall be tagged "Do Not Use" to prevent use, until repaired.
    - Lifts shall only be repaired or altered by a service technician approved by the manufacturer.
- Whenever a lift is utilized (exterior or interior), the area / site shall be inspected for hazards, which include, but are not limited to;
  - Overhead concerns (i.e. beams and columns, lights, sprinklers, etc.)
  - Flooring and ground abnormalities (i.e. holes, unstable / soft ground, floor vents and grates)

## **POWER TOOLS**

- All hand and power tools shall be maintained in safe condition.
  - Electrical cords shall be without damage or splice.
    - Badly twisted primary and extension cords shall be removed from service
  - On all construction sites, the use of Ground Fault Circuit Interrupters (GFCI) is required.
    - When the electrical service has been completed, inspected and approved for the site, and the temporary service has been removed or is no longer in use, the use of GFCI (including pigtailed and fixed) is still required.
- Guards shall be used on all equipment with exposed and moving parts that have the potential to place employees at risk.
  - Guards shall have openings small enough to prevent accidental finger access/exposure
  - Guards removed for maintenance and repair shall be replaced immediately after the work is performed
  - If the guard(s) must be removed, the power to the equipment, machine or power tool shall be unplugged or de-energized by circuit breaker or disconnect.
    - See Lock-Out / Tag-Out requirements in the Electrical section
- Blade guards are required for all table saws
  - Push-sticks shall be located next to, and shall be used for work on table saws, as required.
- Air compressors used for pneumatic equipment shall not be used for removing dust or other particulates from clothing or equipment / tools unless the pressure has been regulated down to below 15 psi.
- Any and all tools found to be damaged or defective shall be removed from service, and tagged **"Do Not Use"** to prevent accidental use. Damaged or defective equipment and tools shall include, but not be limited to;
  - missing ground (pin)
  - equipment and tools from which a shock was received
  - equipment, tools and cords that have been taped to cover physical damage
- Contractors using tools in hazardous areas shall verify that the equipment or tools can be used in that type of environment.
  - Flammable and Combustible Liquids - Intrinsically Safe Equipment
  - Wet Areas - Ground Fault Circuit Interrupters

## **SAWS**

- Any automatic cutoff saw that strokes continuously without the operator being able to control each stroke shall not be used.
- Saw frames or tables shall be constructed with lugs cast on the frame or with an equivalent means to limit the size of the saw blade that can be mounted, to avoid over-speed caused by mounting a saw larger than intended.
- A mechanical or electrical power control shall be provided on each machine to make it possible for the operator to cut off the power from each machine without leaving his position at the point of operation.
- All portions of the saw blade shall be enclosed or guarded, except for the working portion of the blade between the bottom of the guide rolls and the table. Band saw wheels shall be fully encased. The outside periphery of the enclosure shall be solid. The front and back of the band wheels shall be either enclosed by solid material or by wire mesh or perforated metal. Such mesh or perforated metal shall be not less than 0.037 inch (U.S. Gage No. 20), and the openings shall be not greater than 3/8". Solid material used for this purpose shall be of an equivalent strength and firmness. The guard for the portion of the blade between the sliding guide and the upper-saw-wheel guard shall protect the saw blade at the front and outer side. This portion of the guard shall be self-adjusting to raise and lower with the guide. The upper-wheel guard shall be made to conform to the travel of the saw on the wheel.
- Hand-fed circular rip saws and hand-fed circular crosscut table saws. Unless fixed or manually adjustable enclosures or guarding provides equivalent protection, hand-fed circular rip saws and hand-fed circular crosscut table saws shall be guarded as follows to keep employees clear of any danger zones.
- All cracked saws shall be removed from service.
- **All table saws must be equipped with a magnetic disconnect switch. This device prevents automatic re-start of the saws motor after a power outage.**

### **Powered Industrial Trucks / Fork Lifts / Lulls**

Powered Industrial Trucks (including Forklifts) shall be operated in accordance with the requirements of **OSHA 29 CFR 1910.178. This includes Certification of Training on the OSHA Powered Industrial Truck Standard.**

**The operator, must at a minimum, must be evaluated every 3 years.**

Contractors/subcontractors are responsible for the safe operation of the powered industrial trucks and shall insure that the following requirements are met;

The operator is capable of operating the forklift.

The operator has a current Massachusetts hydraulic license. **(Department of Public Safety)**

The operator has proof of training, and documentation to prove successful completion of a class, such as a certification card.

The powered industrial trucks used on this job site have been inspected by an authorized representative of the manufacturer within the last year.

All manuals, tags, labels and warnings are in place on the truck, and are legible.

The powered industrial truck has been evaluated for operation within the building.

Lifts used inside shall have carbon monoxide scrubbing systems or be properly exhausted to prevent carbon monoxide accumulation.

## **Site Security**

### **Pedestrian, Personnel and Vehicle Protection**

- “The Joint Venture” shall discuss site security and personnel and vehicle safety with the owner, before any work is initiated.
- It is the responsibility of “The Joint Venture” to, when necessary, meet with and address any issues that may fall under the jurisdiction of the local fire and police departments.
- Contractors, coordinating with “The Joint Venture” shall take steps necessary to protect the public and maintain work areas that meet or adjoin public ways, sidewalks, building entrances (aisles, corridors, lobbies and other common areas), stairways and roads.
  - The contractor shall erect, install and maintain the appropriate barricades, barriers, fences, guardrails, overhead protection, partitions, signs, shields, and/or other interim controls protect the health, safety and well-being of the general public.
    - Warning signs must be conspicuously posted and adequate in number for protection of the general public.
    - When signs used for exits must be temporarily blocked or obstructed, the signs shall be covered or otherwise blanked to prevent use.

Temporary exits shall be identified from the former exits with new signage with directional arrows to permit safe egress of the public and workforce.

The Exit signs shall be red or green in color, with each letter at least 6” in height with a  $\frac{3}{4}$ ” stroke (width).

- Work shall only be performed during appropriate hours, subject to the requirements of the city or town, and as specified by contract.
- All guardrails to protect the general public and workforce from the potential of fall shall be of adequate strength, and shall be able to withstand a down and outward pressure of 200lbs, in accordance with OSHA

## **Smoking**

**Smoking is not allowed on school grounds!**

## **Motor Vehicles**

All vehicles, regardless of size shall be operated by a competent, licensed operator in accordance with the requirements of the appropriate state, Department of Transportation (DOT) and Registry of Motor Vehicles (RMV).

Any vehicle greater than 26,000lbs, or as specified by the owner, general contractor shall have operators who are evaluated randomly, or as needed for alcohol and drugs as specified by the Department of Transportation.

- Any operator, believed to be under the influence of alcohols, drugs or other medication (including over-the-counter) cough/cold and/or sleep medications shall be removed from vehicle operation, tested in accordance with the DOT and, if determined to be under the influence, shall be driven home by a means other than by themselves in their respective vehicle.
- Any vehicle greater than 10,000 lbs. or higher.
- Vehicles shall be inspected, repaired or serviced by qualified mechanics / personnel.
- All vehicles shall be inspected before each shift by the operator / competent person. All safety issues shall be immediately repaired, or the vehicle removed from service and labeled as out-of-service to prevent unauthorized operation or use.
- Vehicle operators shall not, while driving, utilize cell phones or consume food and/or beverages.
- Vehicle operators shall not operate vehicles unless seat belts are in use
- Vehicles used for the transport of materials shall have the materials properly secured and/or covered.
  - Dump trucks shall utilize covers or tarps when transporting any material over a public way
  - Gas cylinders shall be transported in the upright position, and shall be secured by chain or strap
- Vehicles in tow shall be attached by solid bar, not by chain
- All construction vehicles shall be equipped with the appropriate, charged, inspected and conspicuously placed fire extinguisher
- All passengers in a vehicle shall be seated and shall wear seat belts.
  - Personnel shall not be permitted to ride in the cargo area or pick-up body regardless of length of trip.
- Vehicles not in use shall have the keys removed from the ignition, and placed in a safe location to prevent unauthorized use.
- Riding within the bed of pickup trucks is prohibited.

## **Weather Conditions**

### 1. Spring

- Thawing – ground that was once frozen may now be subject to thawing action. Care must be taken when placing heavy loads on ground level that may shift due to thawing action.

### 2. Summer

- Heat Related Illnesses – the Emergency Action Plan must be kept up to date in order to handle heat related illnesses such as heat exhaustion and heat stroke which may arise in the summer months.
- First Aid – members of the Emergency Action Plan must be properly trained in order to handle such heat related illnesses.
- Drinking Water – adequate potable drinking water must be provided on site so that the workers can drink ample fluids throughout the day.

### 3. Autumn

- Housekeeping – fallen leaves, branches, limbs, etc... that may create a housekeeping situation on must be cleaned up before it creates a slip/fall hazard.

### 4. Winter

- Clothing – adequate layers of clothing must be worn so that the workers are adequately protected from frigid conditions.
- Snow and Ice – all outside work areas, walkways, sidewalks, etc... must be properly cleared, sanded/salted and maintained to prevent a possible slip hazard.
- Cold Related Illnesses – the Emergency Action Plan must be kept up to date in order to handle cold related illnesses such as frost bite and hypothermia, which could arise during the winter months.
- First Aid – members of the Emergency Action Plan must be properly trained in order to handle cold related illnesses.
- Building Access – if permanent elements of the building design are missing during construction (i.e. snow guards, gutters, canopies, etc...), and then attention should be given to those accessible areas around the building perimeter in order to deal with the elements such as rain and snow.

| Preventive Action Recommendations: |
| Corrective Actions Taken:          |

## ACTIVE SHOOTER

An Active Shooter is an individual actively engaged in killing or attempting to kill people in a confined and populated area; in most cases, active shooters use firearms(s) and there is no pattern or method to their selection of victims.

Active shooter situations are unpredictable and evolve quickly. Typically, the immediate deployment of law enforcement is required to stop the shooting and mitigate harm to victims.

Because active shooter situations are often over within 10 to 15 minutes, before law enforcement arrives on the scene, individuals must be prepared both mentally and physically to deal with an active shooter situation.

### Good practices for coping with an active shooter situation:

- ☐ Be aware of your environment and any possible dangers
  - ☐ Take note of the two nearest exits in any facility you visit
  - ☐ If you are in an office, stay there and secure the door
  - ☐ If you are in a hallway, get into a room and secure the door
  - ☐ As a last resort, attempt to take the active shooter down. When the shooter is at close range and you cannot flee, your chance of survival is much greater if you try to incapacitate him/her.
- 
- ☐ **CALL 911 WHEN IT IS SAFE TO DO SO!**

## HOW TO RESPOND WHEN AN ACTIVE SHOOTER IS IN YOUR VICINITY

Quickly determine the most reasonable way to protect your own life.

- 1. Evacuate.** If there is an accessible escape path, attempt to evacuate the premises. Be sure to:
  - ☐ Have an escape route and plan in mind
  - ☐ Evacuate regardless of whether others agree to follow
  - ☐ Leave your belongings behind
  - ☐ Help others escape, if possible
  - ☐ Prevent individuals from entering an area where the active shooter may be
  - ☐ Keep your hands visible
  - ☐ Follow the instructions of any police officers
  - ☐ Do not attempt to move wounded people
  - ☐ Call 911 when you are safe
- 2. Hide out.** If evacuation is not possible, find a place to hide where the active shooter is less likely to find you. Your hiding place should:
  - ☐ Be out of the active shooter's view
  - ☐ Provide protection if shots are fired in your direction (i.e., an office with a closed and locked door)
  - ☐ Do not trap yourself or restrict your options for movement

- ☐ To prevent an active shooter from entering your hiding place:
  - ☐ Lock the door
  - ☐ Blockade the door with heavy furniture

**If the active shooter is nearby:**

- ☐ Lock the door
- ☐ Silence your cell phone and/or pager
- ☐ Turn off any source of noise (i.e., radios, televisions)
- ☐ Hide behind large items (i.e., cabinets, desks)
- ☐ Remain quiet

**If evacuation and hiding out are not possible:**

- ☐ Remain calm
- ☐ Dial 911, if possible, to alert police to the active shooter's location
- ☐ If you cannot speak, leave the line open and allow the dispatcher to listen

**3. Take action against the active shooter.** As a last resort, and only when your life is in imminent danger, attempt to disrupt and/or incapacitate the active shooter by:

- ☐ Acting as aggressively as possible against him/her
- ☐ Throwing items and improvising weapons
- ☐ Yelling
- ☐ Committing to your actions

**HOW TO RESPOND WHEN LAW ENFORCEMENT ARRIVES**

Law enforcement's purpose is to stop the active shooter as soon as possible. Officers will proceed directly to the area in which the last shots were heard.

- ☐ Officers usually arrive in teams of four (4)
- ☐ Officers may wear regular patrol uniforms or external bulletproof vests, Kevlar helmets, and other tactical equipment
- ☐ Officers may be armed with rifles, shotguns, handguns
- ☐ Officers may use pepper spray or tear gas to control the situation
- ☐ Officers may shout commands, and may push individuals to the ground for their safety.

**How to react when law enforcement arrives:**

- ☐ Remain calm and follow officers' instructions
- ☐ Put down any items in your hands (i.e., bags, jackets)
- ☐ Immediately raise hands and spread fingers
- ☐ Keep hands visible at all times
- ☐ Avoid making quick movements toward officers such as holding on to them for safety
- ☐ Avoid pointing, screaming and/or yelling
- ☐ Do not stop to ask officers for help or direction when evacuating, just proceed in the direction from which officers are entering the premises

**Information to provide to law enforcement or 911 operator:**

- ☐ Location of the active shooter
- ☐ Number of shooters, if more than one
- ☐ Physical description of shooter/s
- ☐ Number and type of weapons held by the shooter/s
- ☐ Number of potential victims at the location

**Notes:** The first officers to arrive to the scene will not stop to help injured persons. Expect rescue teams comprised of additional officers and emergency medical personnel to follow the initial officers. These rescue teams will treat and remove any injured persons. They may also call upon able-bodied individuals to assist in removing the wounded from the premises.

Once you have reached a safe location or an assembly point, you will likely be held in that area by law enforcement until the situation is under control, and all witnesses have been identified and questioned. Do not leave until law enforcement authorities have instructed you to do so.

| 9. Date & Time of Incident<br>Date: _____<br>Time: _____<br>AM/PM   | 10: Near-Miss Location – Site of Incident (Building name, Room No., Stairs, Hallway, etc.)<br>If outside of building, give location in reference to nearest building.<br>_____<br>_____<br>_____ |
| 11. Near-Miss Description (Describe fully the protocol/procedures being followed including all substances, equipment, and machinery being used which was related to the near-miss Use additional sheets if necessary)<br>_____<br>_____<br>_____<br>_____<br>_____  |  |
| 12. Personal Protective Equipment (PPE) Used (if applicable)<br>_____<br>_____  |  |
| 13. Severity – Circle the level of severity which you feel could occur if such an incident evolved (Example: High = fatality, permanent disability, high dollar loss; Medium = temporary disability, some dollar loss; Low = minor or no injury, no lost dollar. Consider such factors as physical injuries, damage to equipment or property, and environmental impact)<br>HIGH MEDIUM LOW  |  |
| 14. Probability – Circle the level of probability that a person or property may be exposed to a similar situation, and that required hazards or system failures may be present or likely. (Example: High = tasks occur frequently and by numerous individuals; Medium = tasks occur on a regular basis by certain individuals; Low = tasks occur infrequently by few individuals. Also consider such criteria as complexity of the system, latent and human factors, etc.)<br>HIGH MEDIUM LOW |  |

15. Corrective Actions (what should be done or has been done to prevent recurrence of this incident? E.g. employee training, change of procedures, purchasing of equipment, etc.)

## Shelter-in-Place

Chemical, biological, or radiological contaminants may be released into the environment in such quantity and/or proximity to a place of business that it is safer to remain indoors rather than to evacuate employees. Such releases may be either accidental or intentional. Examples of situations that might result in a decision by an employer to institute "shelter-in-place" include an explosion in an ammonia refrigeration facility across the street, or a derailed and leaking tank car of chlorine on the rail line behind your place of business.

"Shelter-in-place" means selecting an interior room or rooms within your facility, or ones with no or few windows, and taking refuge there. In many cases, local authorities will issue advice to shelter-in-place via TV or radio.

### PREPARING TO STAY OR GO

## SHELTER-IN-PLACE PROCEDURES

Specific procedures for shelter-in-place at a worksite may include the following:

- Close the business.
- If there are customers, clients, or visitors in the building, provide for their safety by asking them to stay - not leave. When authorities provide directions to shelter-in-place, they want everyone to take those steps immediately. Do not drive or walk outdoors.

*Have employees and anyone else in the building call their emergency contacts, then turn on answering systems*

- Unless there is an imminent threat, ask employees, customers, clients, and visitors to call their emergency contact to let them know where they are and that they are safe.

*Close or tape-off all vents in the room used for shelter-in-place*

- Turn on call-forwarding or alternative telephone answering systems or services. If the business has voice mail or an automated attendant, change the recording to indicate that the business is closed, and that staff and visitors are remaining in the building until authorities advise it is safe to leave.
- Quickly lock exterior doors and close windows, air vents, and fireplace dampers. Have employees familiar with your building's mechanical systems turn off all fans, heating and air conditioning systems, and clothes dryers. Some systems automatically provide for exchange of inside air with outside air. These systems, in particular, need to be turned off, sealed, or disabled.
- If you are told there is danger of explosion, close the window shades, blinds, or curtains.
- Gather essential disaster supplies, such as nonperishable food, bottled water, battery-powered radios, first-aid supplies, flashlights, batteries, duct tape, plastic sheeting, and plastic garbage bags.
- Select interior room(s) above the ground floor, with the fewest windows or vents. The room(s) should have adequate space for everyone to be able to sit. Avoid overcrowding by selecting several rooms if necessary. Large storage closets, utility rooms, pantries, copy and conference rooms without exterior windows will work well. Avoid selecting a room with mechanical equipment like ventilation blowers or pipes, because this equipment may not be able to be sealed from the outdoors.
- It is ideal to have a hard-wired telephone in the room(s) you select. Call emergency contacts and have the phone available if you need to report a life-threatening condition. Cellular telephone equipment may be overwhelmed or damaged during an emergency.

*Tape plastic sheeting over vents, windows, and doors to prevent contaminated air from entering the room*

- Take your emergency supplies and go into the room you have designated. Seal all windows, doors, and vents with plastic sheeting and duct tape or anything else you have on hand.
- Consider precutting plastic sheeting (heavier than food wrap) to seal windows, doors, and air vents. Each piece should be several inches larger than the space you want to cover so that it lies flat against the wall. Label each piece with the location of where it fits. [See image at right]
- Write down the names of everyone in the room, and call your business' designated emergency contact to report who is in the room with you, and their affiliation with your business (employee, visitor, client, customer).
- Listen to the radio, watch television, or use the Internet for further instructions until you are told all is safe or to evacuate. Local officials may call for evacuation in specific areas at greatest risk in your community.

## **Fine Classification System for Unsafe Acts/Conditions at Fontaine Bros. Inc. Construction Projects**

This document outlines Fontaine Bros. Inc. program to fine companies, not individuals, whose employees are uncooperative in maintaining a safe site as part of the Projects Disciplinary Action Program. The subcontractor agrees to adhere to the fine schedule for violations about which he/she was notified by the site Supervisor, Project Manager, or Construction Management Representative and their agents.

The subcontractor agrees to have these fines withheld from monies due him/her. Any violation of this agreement will be cause for suspension of operations until the agreement is fully complied with. All monetary amounts outlined may be doubled for a second offense.

At the conclusion of the project, all funds collected will be donated on the behalf of the contractors employed on the project to a local charity.

Date

| <b>Fine</b> | <b>Item #</b> | <b>Project Management</b>  |
|-------------|---------------|--|
| \$200       | A1            | Any action or in-action which could result in permanent injury or death will be fined with no warning. This may result in dismissal of worker and immediate foreman. |
| \$100       | A2            | Employees did not receive safety training.   |
| \$100       | A3            | New employee did not attend safety orientation.  |
| \$100       | A4            | All employees did not attend and sign a weekly safety meeting.   |
| \$100       | A5            | Appropriate first-aid supplies were not available on project.  |
|             |               | <b>Hazard Communication</b>  |
| \$100       | B1            | Written Haz-Com program is not immediately available.  |
| \$100       | B2            | Reliable procedure is not established for hazard communication.  |
| \$100       | B3            | All employees have not received Haz-com training.  |
| \$100       | B4            | Containers are not properly labeled.   |
| \$100       | B5            | Complete SDS Index not available on project.   |
|             |               | <b>Electrical</b>  |
| \$100       | C1            | Approved GFCI is not in use on all 120 volt, single-phase, 15 & 20 ampere receptacle outlets which are not part of the permanent structural wiring.                  |
| \$100       | C2            | Daily visual inspection of cords, plugs, tools, equipment, etc. not conducted.   |
|             |               | <b>Fire Protection</b>   |
| \$100       | D1            | Employees have not been trained in evacuation, emergency firefighting response and equipment use.  |
| \$100       | D2            | Adequate number of fire extinguishers is not available.  |
| \$100       | D3            | "Hot Work" permit not obtained.  |
|             |               | <b>Construction Area</b>   |
| \$100       | E1            | General Duty Clause Violation  |
| \$100       | E2            | Defective tools and equipment are not tagged to prevent use.   |
| \$100       | E3            | Electrical cords are not routed away from stairways, walkways and driveways.   |
| \$100       | E4            | Flammable and combustibles are not stored properly.  |
| \$100       | E5            | Fire extinguishers are not fully charged, inspected and tags current.  |
|             |               |  |
|             |               | <b>Housekeeping</b>  |
| \$100       | F1            | Debris not removed on regular basis  |
| \$100       | F2            | Building exits obstructed  |
| \$100       | F3            | Snow, ice, water not removed as necessary.   |
| \$100       | F4            | Material staging area not reasonably organized   |
| \$100       | F5            | Nails not removed from lumber.   |
|             |               |  |
| <b>Fine</b> | <b>Item #</b> | <b>Flammable and Combustible Liquids</b>   |
| \$100       | G1            | Storage and handling containers not approved and labeled.  |

|       |    |   |
|-------|----|---|
| \$100 | G2 | Inside storage not in compliance with regulations   |
| \$100 | G3 | Required firefighting equipment not properly located and fully operational  |
| \$100 | G4 | Outside storage not in compliance with regulations.   |
| \$100 | G5 | Flammable and combustible liquids stored in passage ways, stairways and exits.  |
| \$100 | G6 | "Danger, no smoking" signs not posted.  |
| \$100 | G7 | Storage location not at required distance from buildings.   |
| \$100 | G8 | Storage cabinets not available where required.  |
|       |    | <b>Compressed Gas Cylinders</b>   |
| \$100 | H1 | Cylinder hoisting not performed properly.   |
| \$100 | H2 | Cylinder valves not closed with caps in place.  |
| \$100 | H3 | Oxygen and gas cylinders not separated by a fire-resistant partition or required distance.                              |
| \$100 | H4 | Cylinders not upright and secured   |
|       |    | <b>Temporary Electrical</b>   |
| \$100 | I1 | Extension cords not 3-wired and rated for hard or extra hard usage.   |
| \$100 | I2 | Temporary lighting not properly supported, protected and adequate.  |
| \$100 | I3 | Circuits not properly labeled, grounded and inspected.  |
| \$100 | I4 | Breakers not adequately labeled   |
|       |    | <b>Signs and Barricades</b>   |
| \$100 | J1 | Proper fences, barricades and signs not properly installed to warn persons of a potential hazard                        |
|       |    | <b>Site Clearing</b>  |
| \$100 | K1 | Dig Safe not contacted.   |
| \$100 | K2 | Overhead or adjacent utilities, encumbrances, structures, etc. not identified and protected.                            |
| \$100 | K3 | Dig Safe numbers not current.   |
|       |    | <b>Trenching and Excavation</b>   |
| \$200 | L1 | Employees not protected from cave-ins, sliding, falling, or rolling loads, hazardous atmospheres or water accumulation. |
| \$200 | L2 | Excavation in excess of 20 feet deep, protective system not designed by a qualified person(s).                          |
| \$100 | L3 | Safe access not provided for employees.   |
| \$200 | L4 | Protective systems defective, damaged or improperly installed   |
| \$200 | L5 | Proper slopes or benching not maintained, spoil piles not 2 feet or more from edge of bank.                             |
| \$100 | L6 | A trained competent person not available to monitor all excavation procedures.  |
| \$100 | L7 | Soil not tested by a competent person to determine soil type  |
| \$100 | L8 | Excavations not properly barricaded.  |
| \$100 | L9 | Excavations not inspected as required.  |
|       |    | <b>Ladders and Stairways</b>  |

|       |    |   |
|-------|----|---|
| \$100 | M1 | Employees not trained in ladder and stairway safety by a competent person.  |
| \$100 | M2 | Ladders not inspected regularly.  |
| \$100 | M3 | Stair rails, hand rails, and guard rails missing.   |
| \$100 | M4 | Ladders not tagged to indicate type and capacity.   |
| \$100 | M5 | Job-made ladders not constructed as required.   |
| \$100 | M6 | Employee using a ladder in an unsafe manner   |
|       |    | <b>Scaffolding</b>  |
| \$100 | N1 | Guard rails with toe boards not installed as required.  |
| \$100 | N2 | Scaffold not erected plumb, level and secured.  |
| \$100 | N3 | Safe access not provided for scaffolds.   |
| \$100 | N4 | Scaffold components and accessories not defect free.  |
| \$100 | N5 | Scaffolding not designed, erected, dismantled, moved or altered under the supervision of a trained, competent person.                         |
| \$100 | N6 | Scaffold overloading.   |
| \$100 | N7 | Improper scaffold access  |
|       |    | <b>Personal Protective Equipment</b>  |
| \$100 | O1 | Fall protection/full arrest equipment not used when and where they are required.  |
| \$100 | O2 | Approved hard hats not worn by all employees.   |
| \$100 | O3 | Required eye protection not used.   |
| \$100 | O4 | Required reflective vest/clothing not used.   |
| \$100 | O5 | Proper respiratory protection not provided  |
|       |    | <b>Fall Protection</b>  |
| \$100 | P1 | Floor, wall and roof openings not protected with standard guards rails or solid covers.   |
| \$100 | P2 | Open sides of roofs, floors, platforms, bridges, decks, etc. Not properly protected.  |
| \$100 | P3 | Guard rails not maintained and in compliance.   |
|       | P4 | Personal fall arrest not used or is not used correctly  |
| \$100 |    | <b>Power Tools</b>  |
| \$100 | Q1 | Tools are not properly grounded.  |
| \$100 | Q2 | Employees not trained to use power tools safely.  |
| \$100 | Q3 | Required guards not in place and operational.   |
|       |    |   |
|       |    | <b>Concrete</b>   |
| \$100 | S1 | Protruding reinforcing steel onto or into which any employees could fall not guarded to eliminate the hazard of impalement.                   |
| \$100 | S2 | Workers not trained to avoid the hazards of concrete burns and inhalation of dust.  |
| \$100 | S3 | Personal protective equipment such as gloves, boots, hard hats eye and face protection not used.  |
| \$100 | S4 | Form work has not been designed, fabricated, erected, supported, braced and maintained to support vertical and lateral loads without failure. |

|             |               |   |
|-------------|---------------|---|
| \$100       | S5            | Safe shoring and form removal procedures not established.   |
| \$100       | S6            | Required distances not maintained between overhead electrical power lines and concrete placement equipment.                                       |
|             |               | <b>Masonry</b>  |
| \$100       | T1            | Walls not properly supported.   |
| \$100       | T2            | Controlled access zone not established as required.   |
| \$100       | T3            | Planking not scaffold grade.  |
| \$100       | T4            | Respiratory protection not used during sawing, mortar mixing or other silica dust generating activities.  |
| \$100       | T5            | Masonry saws not properly grounded.   |
|             |               | <b>Structural Steel</b>   |
| \$100       | U1            | Workers not using the required fall protection, arrest equipment.   |
| \$100       | U2            | The area beneath the steel erection not designated off limits to unauthorized employees.  |
| \$100       | U3            | Hoisting equipment and accessories not inspected as required.   |
| \$100       | U4            | Tag lines not used to control loads.  |
| \$100       | U5            | Proper erection bolting and bracing procedures not followed.  |
| \$100       | U6            | Floor and roof openings not protected.  |
|             |               | <b>Welding</b>  |
| \$100       | V1            | Employees have not been properly trained in welding and cutting operations.   |
| \$100       | V2            | Flash screens not used where required.  |
| \$100       | V3            | Fire extinguisher not provided near hot-work locations.   |
| \$100       | V4            | Torches, hoses, gauges, regulators, etc. not free of defects.   |
| \$100       | V5            | Compressed gas cylinders are not stored and used properly, secured upright, caps on when not in use, segregated from electrical and heat hazards. |
|             |               | <b>Motor Vehicles</b>   |
| \$100       | W1            | Operators not properly trained and licensed.  |
| \$100       | W2            | Vehicles not inspected daily before use.  |
| \$100       | W3            | Driver and all passengers not using provided seat restraints.   |
|             |               |   |
| <b>Fine</b> | <b>Item #</b> | <b>Heavy Equipment</b>  |
| \$100       | X1            | Workers "riding" on heavy equipment.  |
| \$100       | X2            | Inspection and maintenance not performed as required.   |
| \$100       | X3            | Operators not properly trained and or authorized.   |
| \$100       | X4            | Audible reverse warning is not operational.   |
| \$100       | X5            | ROPS protection not provided.   |
| \$100       | X6            | Equipment does not have seat belts.   |
| \$100       | X7            | Cab glass must be free of defect/damage.  |
| \$100       | X8            | Access roads not properly maintained.   |
| \$100       | X9            | Fire extinguishers not provided in equipment.   |
|             |               | <b>Cranes</b>   |
| \$200       | Y1            | Overhead power lines not de-energized, removed or protected.  |

|             |               |  |
|-------------|---------------|--|
| \$200       | Y2            | Required distance not maintained from live wires.  |
| \$100       | Y3            | Load capacity and hand signal charts not posted and legible.   |
| \$200       | Y4            | Crane not used as intended by manufacturer.  |
| \$200       | Y5            | Operator not authorized for equipment use.   |
| \$100       | Y6            | Annual inspection certificate missing.   |
| \$100       | Y7            | Inspection and maintenance records not properly logged.  |
| \$100       | Y8            | Glass not free of defects and distortion.  |
| \$100       | Y9            | Trained signal person not used as required.  |
| \$100       | Y10           | Swing radius of counterweight not properly barricaded.   |
| \$100       | Y11           | Crane not positioned on solid level ground.  |
| \$100       | Y12           | Outriggers not used as required.   |
| \$100       | Y13           | Material handling equipment and accessories not inspected prior to use.                                  |
| \$100       | Y14           | Qualified rigger not available as required.  |
|             |               | <b>Aerial Lifts</b>  |
| \$100       | Z1            | Employees using aerial lifts not trained and authorized.   |
| \$100       | Z2            | Manufacturer's operation and safety rules not followed.  |
| \$100       | Z3            | Lift safety not inspected and all controls not tested prior to each day's use.                           |
| \$100       | Z4            | Lift not positioned on solid, level ground   |
| \$100       | Z5            | Load limits exceeding manufacturer's specifications.   |
| \$100       | Z6            | Workers in the lift basket not standing firmly on the floor.   |
| \$100       | Z7            | Workers not using required fall protection/arrest system.  |
|             |               | <b>Demolition</b>  |
| \$100       | AA1           | Not following the demolition plan.   |
| \$100       | AA2           | Dust control inadequate.   |
| \$100       | AA3           | Safety meetings not conducted to keep employees apprised of changing, dangerous or hazardous conditions. |
|             |               | <b>Crystalline Silica</b>  |
| \$100       | BB1           | Worker have not been properly trained to recognize and avoid the potential hazards                       |
| \$100       | BB2           | Adequate ventilation, vacuum system or wet methods not provided.   |
| \$100       | BB3           | A written exposure control plan not developed  |
| \$100       | BB4           | Controls based on Table 1 to minimize silica exposure are not in place                                   |
| <b>Fine</b> | <b>Item #</b> | <b>Confined Space Entry</b>  |
| \$100       | CC1           | Fire extinguishers not readily available.  |
| \$100       | CC2           | Worker not properly trained.   |
| \$200       | CC3           | A comprehensive hazard assessment has not been conducted.  |
| \$200       | CC4           | Required safety equipment not available.   |
| \$100       | CC5           | Entry permit system not completed.   |
| \$200       | CC6           | Atmospheric testing not conducted as required.   |

Section 00 73 00c  
INSURANCE REQUIREMENTS

The Subcontractor, at its own expense, shall purchase and maintain in full force and effect, such insurance in a company or companies lawfully authorized to do business in the jurisdiction in which the Project is located, insurance policies as outlined below. Such policies shall protect the Contractor from claims which may arise out of or result from the Subcontractor's (or anyone directly or indirectly employed by the Subcontractor) operation's performed under the Contract. The Subcontractor shall be required to provide Certificates of Insurance, and, upon demand, any policy or endorsement, evidencing the following coverage.

- D.1 Insurance covering claims under workmen's compensation, disability benefit and other similar employee benefit acts. Insurance also covering claims for damages because of bodily injury, occupational disease or sickness, or death of his employees with the following limits:

|   |           |
|---|-----------|
| Workmen's Compensation:                   | Statutory |
| Employer's Liability:                     |           |
| Bodily Injury by Accident (per Accident): | \$500,000 |
| Bodily Injury by Disease (per Employee):  | \$500,000 |
| Bodily Injury by Disease (Policy Limit):  | \$500,000 |

- D.2 Commercial General Liability insurance, which shall include a blanket contractual liability insuring the indemnification obligations of this Agreement, broad form property damage liability, and personal injury liability coverage extensions. Such policy shall not exclude X, C, U exposures. Commercial general liability policy shall include products and completed operations liability. Further, products and completed operations liability shall be maintained in full force and effect for a period of three (3) years following final completion of the Work. All coverage required under commercial general liability should be provided on an occurrence form with the following minimum limits: (Per Project Aggregate)

|                        |             |
|------------------------|-------------|
| Each Occurrence        | \$1,000,000 |
| Personal & Adv. Injury | \$1,000,000 |
| Products-Comp Op Agg   | \$1,000,000 |
| General Aggregate      | \$2,000,000 |
| Medical Expense        | \$10,000    |

The required limits may be satisfied by a combination of a primary policy and an excess or umbrella policy.

- D.3 Umbrella form Excess liability coverage covering all work performed by the Subcontractor under this Contract.

| <u>Umbrella Coverage</u> | <u>GMP Amount</u> |
|--------------------------|-------------------|
| \$1,000,000-\$5,000,000  | \$5,000,000       |

- D.4 Automobile Liability (Bodily Injury and Property Damage Liability) including coverage for all owned, non-owned, and hired automobiles. A compulsory Massachusetts automobile policy is acceptable for vehicles registered in Massachusetts only.

|                                  |             |
|----------------------------------|-------------|
| Bodily Injury (per occurrence)   | \$1,000,000 |
| Property Damage (per occurrence) | \$1,000,000 |
| <b>OR</b>                        |             |

---

INSURANCE REQUIREMENTS

Bodily Injury and Property Damage (per occurrence) \$1,000,000  
Combined Single Limit.

The policy shall include a CA9948 Pollution Endorsement

- 0.5 Contractor's Equipment Coverage on an "All Risk" basis, covering physical damage to all tools and equipment, including automotive equipment used by the Subcontractor with limits at least high enough to provide for replacement of items critical to Project efforts.

0.6 Contractor's Pollution Liability

The subcontractor shall purchase and maintain coverage for bodily injury and property damage resulting from liability arising out of pollution related exposures such as asbestos abatement, lead paint abatement, tank removal, removal of contaminated soil, etc. The insurance policy shall cover the liability of the subcontractor during the process of removal, storage, transport and disposal of hazardous waste and contaminated soil and/or asbestos abatement. The policy shall include coverage for on-Site and off-Site bodily injury and loss of, damage to, or loss of use of property, directly or indirectly arising out of the discharge, dispersal, release or escape of smoke, vapors, soot, fumes, acids, alkalis, toxic chemicals, liquids or gas, waste materials or other irritants, contaminants or pollutants into or upon the land, the atmosphere or any water source or body of water, whether it be gradual or sudden and accidental. The policy shall also include defense and clean-up costs. The Owner and the MBLC shall be named as additional insureds and coverage must be on an occurrence basis. The amount of coverage shall be as follows unless a higher amount is specified in Section 8 below, in which case the CM shall provide the additional coverage:

|                    |                            |
|--------------------|----------------------------|
| Limit of Liability | \$1,000,000 per occurrence |
|                    | \$3,000,000 aggregate      |

- D.7 If any operations performed within the scope of this Contract require the use of any aircraft or watercraft (owned or unowned), Subcontractor shall maintain liability insurance satisfactory to the Contractor.
- D.8 Fontaine Bros., Inc., CONSTRUCTION MANAGER shall be named "additional insured" on the General Liability, Automobile and Excess Liability (Umbrella) policies. General Liability Additional Insured status shall be specifically provided by Additional Insured Form CG2010(1185), or equivalent, and shall apply on a primary and non-contributing basis before any other Insurance or self-Insurance, including any deductible, maintained by, or provided to the additional insureds, and shall be for the duration of the contract, including the Completed Operations Period. All policies shall be endorsed to Waive all Rights of Subrogation in favor of Fontaine Bros., Inc., and CONSTRUCTION MANAGER. Policies shall not be canceled, materially changed or non-renewed without thirty (30) days advance notice to Fontaine Bros., Inc., CONSTRUCTION MANAGER. *"Failure to provide Additional Insured status shall result in Fontaine Bros., Inc. purchasing and owners & Contractors Protective Liability policy (OCP) on behalf of the Subcontractor. The premium for this policy will be back-charged to your contract"*. In addition, THE OWNER, City of Worcester and Lamoureux Pagano & Associates, Inc. shall be added as additional insureds on the policies aforementioned.
- D.9 Such other kinds of insurance as may be required by the Contractor or by the General Contract Documents, each such policy to be in the amount stipulated in the General Contract Documents unless a different amount is hereinafter designated or is otherwise prescribed in writing by the Contractor.
- D.10 Waiver of Subrogation  
Coverage shall include premium for temporary occupancy. Coverage shall include a Waiver of Subrogation in favor of Fontaine Bros., Inc., Construction Manager, THE OWNER, City of Worcester and Lamoureux Pagano & Associates, Inc.

DETERMINATIONS BUREAU

## EXEMPT PURCHASER CERTIFICATE

MASSACHUSETTS DEPARTMENT OF REVENUE  
CERTIFICATE OF EXEMPTION

Certification is hereby made that the organization herein named is an exempt purchaser under General Laws, Chapter 64H, Sections 6(d) and (e). All purchases of tangible personal property by this organization are exempt from taxation under said chapter to the extent that such property is used in the conduct of the business of the purchaser. Any abuse or misuse of this certificate by any tax exempt organization or any unauthorized use of this certificate by any individual constitutes a serious violation and will lead to revocation. Willful misuse of this Certificate of Exemption is subject to criminal sanctions of up to 1 year in prison and \$10,000 (\$50,000 for corporations) in fines.

Sales to the United States, the Commonwealth or to any political subdivision thereof or to their respective agencies are exempt.

Sales to any Corporation, Foundation, Organization or Institution which is exempt from taxation under the provisions of §501 (c)(3) of the U. S. Internal Revenue Code, as amended and in effect for the applicable period, are exempt from tax provided that:

- The tangible personal property which is subject to such Sales Tax is used in the conduct of such Organization or Agency;
- The Organization or Agency shall have obtained: a Certificate of Exemption (Form ST-2) from the Commissioner of Revenue certifying that it is entitled to exemption and shall attach a photocopy of such form (ST-2) hereto;
- The Vendor must retain a copy of Form ST-5 accompanied by Form ST-2 as are other tax records. See Record Retention Regulation 830 CMR 62C.24

Information about Prevailing Wage Schedules for Awarding Authorities and Contractors

- This wage schedule applies only to the specific project referenced at the top of this page and uniquely identified by the "Wage Request Number" on all pages of this schedule.
- An Awarding Authority must request an updated wage schedule from the Department of Labor Standards ("DLS") if it has not opened bids or selected a contractor within 90 days of the date of issuance of the wage schedule. For CM AT RISK projects (bid pursuant to G.L. c.149A), the earlier of: (a) the execution date of the GMP Amendment, or (b) the bid for the first construction scope of work must be within 90-days of the wage schedule issuance date.
- The wage schedule shall be incorporated in any advertisement or call for bids for the project as required by M.G.L. c. 149, § 27. The wage schedule shall be made a part of the contract awarded for the project. The wage schedule must be posted in a conspicuous place at the work site for the life of the project in accordance with M.G.L. c. 149 § 27. The wages listed on the wage schedule must be paid to employees performing construction work on the project whether they are employed by the prime contractor, a filed sub-bidder, or any sub-contractor.
- All apprentices working on the project are required to be registered with the Massachusetts Department of Labor Standards, Division of Apprentice Standards (DLS/DAS). Apprentice must keep his/her apprentice identification card on his/her person during all work hours on the project. An apprentice registered with DAS may be paid the lower apprentice wage rate at the applicable step as provided on the prevailing wage schedule. **Any apprentice not registered with DLS/DAS regardless of whether or not they are registered with any other federal, state, local, or private agency must be paid the journeyworker's rate for the trade.**
- The wage rates will remain in effect for the duration of the project, except in the case of multi-year public construction projects. For construction projects lasting longer than one year, awarding authorities must request an updated wage schedule. Awarding authorities are required to request these updates no later than two weeks before the anniversary of the date the contract was executed by the awarding authority and the general contractor. For multi-year CM AT RISK projects, awarding authority must request an annual update no later than two weeks before the anniversary date, determined as the earlier of: (a) the execution date of the GMP Amendment, or (b) the execution date of the first amendment to permit procurement of construction services. Contractors are required to obtain the wage schedules from awarding authorities, and to pay no less than these rates to covered workers. The annual update requirement is not applicable to 27F "rental of equipment" contracts.
- Every contractor or subcontractor which performs construction work on the project is required to submit weekly payroll reports and a Statement of Compliance directly to the awarding authority by mail or email and keep them on file for three years. Each weekly payroll report must contain: the employee's name, address, occupational classification, hours worked, and wages paid. Do not submit weekly payroll reports to DLS. A sample of a payroll reporting form may be obtained at <http://www.mass.gov/dols/pw>.
- Contractors with questions about the wage rates or classifications included on the wage schedule have an affirmative obligation to inquire with DLS at (617) 626-6953.
- Employees not receiving the prevailing wage rate set forth on the wage schedule may report the violation to the Fair Labor Division of the office of the Attorney General at (617) 727-3465.
- Failure of a contractor or subcontractor to pay the prevailing wage rates listed on the wage schedule to all employees who perform construction work on the project is a violation of the law and subjects the contractor or subcontractor to civil and

**Additional Apprentice Information:**

Minimum wage rates for apprentices employed on public works projects are listed above as a percentage of the pre-determined hourly wage rate established by the Commissioner under the provisions of the M.G.L. c. 149, ss. 26-27D. Apprentice ratios are established by the Division of Apprenticeship Training pursuant to M.G.L. c. 23, ss. 11E-11L.

All apprentices must be registered with the Division of Apprenticeship Training in accordance with M.G.L. c. 23, ss. 11E-11L.

All steps are six months (1000 hours.)

Ratios are expressed in allowable number of apprentices to journeymen or fraction thereof, unless otherwise specified.

\*\* Multiple ratios are listed in the comment field.

**MINORITY/WOMEN BUSINESS ENTERPRISE AND WORKER UTILIZATION**

FORM EOO-D/102

**BIDDERS INFORMATION ON PROCEDURES AND FORMS**

To make all contractors aware of their obligation to follow certain procedures and file appropriate reports pertaining to those procedures, the following is an outline of the Minority/Women Business Enterprise and Worker Utilization Program. Also included here is the Affidavit of Acknowledgement and Certification of Compliance, Form E00-101. This form is to be completed and filed as part of your bid.

The following documents are included in this bid:

1. **AFFIDAVIT OF ACKNOWLEDGEMENT AND CERTIFICATION OF COMPLIANCE, E00-101**

General Contractors, Trade Contractors, Filed Subcontractors and Non-Filed Subcontractors complete and submit this form as part of their bid on all City of Worcester construction projects.

Each additional subcontractor shall complete this form and submit it to the general contractor who shall forward it to the Contract Compliance Office, **PRIOR** to the subcontractor's beginning work on the project.

2. **SUPPLEMENTAL EQUAL EMPLOYMENT OPPORTUNITY ANTI-DISCRIMINATION AND AFFIRMATIVE ACTION PROGRAM E00-D/3**

The agreement between the City of Worcester and the Massachusetts Commission Against Discrimination establishing the goals and procedures for the utilization of minority and women owned businesses and minority and women workers on City Construction projects.

3. **SUCCESSFUL BIDDER'S OBLIGATION TO PROCEDURES AND FORMS, EOO-D/103**

This is a listing of the procedures and forms that will be provided to the successful bidder for use prior to beginning work and at various times throughout the life of the project.

**MINORITY/WOMEN BUSINESS ENTERPRISE AND WORKER UTILIZATION PROGRAM**

**AFFIDAVIT OF ACKNOWLEDGEMENT and CERTIFICATE OF COMPLIANCE**

**FORM EOO-101**

**TO ALL CONTRACTORS:**

The Bidder or Proposer and all Trade Contractors and Subcontractors under the Bidder or Proposer must complete and submit this form as part of their bid.

**I. THE MINORITY AND WOMEN BUSINESS AND UTILIZATION PROGRAMS**

Pursuant to an agreement between the City of Worcester and the Commonwealth of Massachusetts, during the performance of any contract with the City of Worcester, all General Contractors, Trade Contractors, Filed Subcontractors, and Subcontractors are bound by the obligations of the Supplemental Equal Employment Opportunity Anti-Discrimination and Affirmative Action Program. All contractors and subcontractors if subcontracting any portion of the work are obligated to make a good faith effort to engage 10% minority and 5% women owned businesses. Further, each contractor shall make a good faith effort to maintain a workforce that is 10% minority and 5% women.

The undersigned hereby certifies that he/she is familiar with the provisions of The Supplemental Equal Employment Opportunity Anti-Discrimination and Affirmative Action Programs and agrees to adhere to the provisions therein.

**II.** This contractor IS ☐ or IS NOT ☐ certified by the State Office of Minority and Women Business Assistance to be a minority or women owned and operated business; and

**III.** WILL ☐ or WILL NOT ☐ subcontract any portion of this contract.

**WAGE THEFT PREVENTION CERTIFICATION**

By the Revised Ordinances, Chapter 2, Section 39, the city of Worcester has established requirements for certain contracts in an effort to prevent wage theft. Prospective contractors must provide the following certification and disclosures with their bids/proposals. The City will not award a contract without receipt of this completed certification.

**INSTRUCTIONS:** A prospective contractor shall **(a)** check Box 1 *OR* Box 2, as applicable, **(b)** check Boxes 3-5, **(c)** sign this form certifying compliance with the Wage Theft Prevention Ordinance, and **(d)** submit the completed form with its bid/proposal. For multi-year contracts, the successful bidder/proposer shall submit the completed form annually to the Purchasing Director.

Pursuant to the Wage Theft Prevention Ordinance, successful bidders/proposals shall post in conspicuous places the Mass. Wage and Hour Laws notice informing employees of the protections of G.L. c. 149, Sec. 151, and the Fair Labor Standards Act (FLSA). The notice may be found at <http://www.mass.gov/ago/docs/workplace/wage/wagehourposter.pdf>

ALL BIDDERS/PROPOSERS MUST CERTIFY THAT [check either Box 1 or Box 2, as applicable]

1. ☐ Neither this vendor/contractor nor any prospective subcontractor has been subject to a federal or state criminal or civil judgment, administrative citation, final administrative determination, order or debarment resulting from a violation of G.L. c. 149, G.L. c. 151, or FLSA, within three (3) years prior to the date of this bid/proposal submission.

OR

2. ☐ This vendor/contractor, or a prospective subcontractor, has been subject to a federal or state criminal or civil judgment, administrative citation, final administrative determination, or debarment resulting from a violation of G.L. c. 149, G.L. c. 151, or FLSA, within three (3) years prior to the date of this bid/proposal submission. The firm shall provide a copy of the same with the bid/proposal.

ALL BIDDERS/PROPOSERS MUST CERTIFY EACH OF THE FOLLOWING

3. ☐ Within five (5) days of receiving notice, the vendor/contractor shall report and provide a copy of any federal or state criminal or civil judgment, administrative citation, final administrative determination, order or debarment resulting from a violation of G.L. c. 149, G.L. c. 151, or FLSA imposed on this firm or on any prospective subcontractor while any bid/proposal to the City is pending and, if awarded a contract, during the term of the contract provide the same to the Purchasing Director.

4. ☐ A vendor/contractor awarded a contract that has disclosed under paragraph 3 above shall, upon request, furnish monthly certified payrolls for the City contract as the Purchasing Director instructs and shall, at the discretion of the Purchasing Director, obtain a wage/payment bond or other suitable insurance as required by the Wage Theft Prevention Ordinance. Vendors/contractors subject to a state or federal debarment for violation of the above laws or prohibited from contracting with the Commonwealth are prohibited from contracting with the City, and upon a finding or order of debarment or prohibition, the City may terminate the contract.

5. ☐ The contractor shall post notices provided by the City in conspicuous places informing employees of the protections of the Wage Theft Prevention Ordinance, and applicable local, state and federal law.

The undersigned certifies under the pains and penalties of perjury that the contractor is in compliance and agrees to remain in compliance with the provisions of the Wage Theft Prevention Ordinance for the term of its contract with the City.

Signed: \_\_\_\_\_  
Print Name & Title Company Name Date

**CORI COMPLIANCE / GENDER IDENTITY & EXPRESSION**

Vendors entering into contracts with the City of Worcester must affirm that their policies regarding CORI information are consistent with the CORI hiring standards set by the City of Worcester. The City's CORI hiring policy may be downloaded from City of Worcester website [www.worcesterma.gov](http://www.worcesterma.gov). Questions pertaining to the City's CORI hiring policy are to be directed to the Equal Employment Opportunity Officer, Executive Office of Human Resources at 508-799-1030.

**CERTIFICATION**

**All Vendors must check one of the three lines below.**

1. ☐ CORI checks are not performed on any Applicants.
2. ☐ CORI checks are performed on some or all Applicants. The Vendor, by affixing a signature below, affirms under penalties of perjury that its CORI policy is consistent with the standards set forth with the CORI hiring standards set by the City of Worcester.
3. ☐ CORI checks are performed on some or all Applicants. The Vendor's CORI policy is not consistent with the standards set forth with the CORI hiring standards set by the City of Worcester. (a copy of the Vendor's written CORI policy must accompany this form).

\_\_\_\_\_  
(Typed or printed name of person  
signing quotation, bid or proposal)

\_\_\_\_\_  
Signature

\_\_\_\_\_  
Name of Business

A Vendor with a CORI policy that does NOT conform to the City standards must check Line 3. Vendors who check Line 3 will not be permitted to enter into contracts with the City, absent a waiver granted by the City. For any waiver to be granted, a written request should accompany bid submission explaining in detail why the vendor fails or refuses to comply with the City's CORI hiring standards.

**Gender Identity Standards Applicable to Vendors**

The city will do business only with vendors that have adopted and employ Gender Identity policies, practices and standards that are consistent with city standards.

The city may review all vendors' Gender Identity policies and practices for consistency with city standards.

By signing this bid, vendor confirms that their Gender Identity policies, practices and standards are consistent with those of the City of Worcester. For further information please refer to the Ordinance Relative to Gender Identity and Expression found at [www.worcesterma.gov](http://www.worcesterma.gov) or call the LGBTQ Liaison/Director of Human Rights & Disabilities at 508-799-8486.

[THIS PAGE IS INTENTIONALLY LEFT BLANK]

**THE CITY OF WORCESTER****SUPPLEMENTAL EQUAL EMPLOYMENT OPPORTUNITY ANTI-DISCRIMINATION AND AFFIRMATIVE ACTION PROGRAM****I. AGREEMENT**

During the performance of this contract, the Contractor or Filed Subcontractor and all subcontractors (herein collectively referred to as the Contractor), for himself/herself, his/her assignees, and successors in interest, agree as follows:

1. In conjunction with the performance of work under this contract, the contractor shall not discriminate against any employee or applicant for employment because of race, color, religious creed, national origin, age, sex, or handicap. The aforesaid provision shall include, but not be limited to, the following: employment upgrading, demotion, or transfer; recruitment advertising; layoff; termination, rates of pay or other forms of compensation; conditions or privileges of employment; and selection for apprenticeship. The contractor shall post hereafter in a conspicuous place, available to employees and applicants for employment, notices to be provided by the Commission setting forth the provisions of the Fair Employment Practices Law of the Commonwealth (M.G.L. Chapter 151 B).
2. In connection with the performance of work under this contract, the Contractor shall undertake in good faith affirmative action measures designed to eliminate any discriminatory barriers in the terms and conditions of employment on the grounds of race, color, religious creed, national origin, age, sex, or handicap, and to eliminate and remedy any effects of such discrimination in the past. Such affirmative action shall entail positive and aggressive measures to ensure equal opportunity in the areas of apprenticeship training programs. This affirmative action shall include all action required to guarantee equal employment opportunity for all persons, regardless of race, color, religious creed, national origin, age, sex, or handicap. The purpose of this provision is to ensure to the fullest extent possible an adequate supply of skilled tradesmen for this and future City public construction projects.

**II. OBLIGATION**

1. As part of the obligation of remedial action under the foregoing section, the Contractor shall maintain goals on this project no less than 10 percent (10%) minority employee and 5 percent (5%) women employee hours of the total work hours in each job category including but not limited to, bricklayers, carpenters, cement masons, electricians, iron workers, operating engineers, and those "classes of work" enumerated in section 44C of chapter 149 of the Massachusetts General Laws.
2. In the hiring of minority and women journeymen, apprentices, trainees and advanced trainees, the Contractor shall rely on referrals from a multi-employer affirmative action program approved by the City, traditional referral methods utilized by the construction industry, and referrals from agencies, not more than three in number at any one time, designated by the City.

### III. REPORTS

1. Contractor shall prepare projected manning tables on a quarterly basis, **Quarterly Projected Workforce Table, E00-105**. These shall be broken down into projections by week, for workers required in each trade. Copies shall be furnished to the City one week in advance of the commencement of the period covered, and at such time as there is a need to be updated during the period.
2. Records of employment referral orders, prepared by the Contractor, shall be made available to the City on request.
3. The Contractor shall prepare the **Certified Payroll Report on a weekly basis**, which lists the hours worked in each trade by each employee identified as minority, non-minority, male and female. Copies of these shall be provided to the City at the end of each week.

### IV. SUBCONTRACTING WORK

If the Contractor shall use any Subcontractor on any work performed under this contract, affirmative action shall be taken to negotiate with qualified minority and women contractors. This affirmative action shall cover both pre-bid and post-bid periods.

### V. EMPLOYMENT

In the employment of journeymen, apprentices, trainees, and advanced trainees, the Contractor shall give preference, first to citizens of the Commonwealth who have served in the armed forces of the United States in time of war and have been honorably discharged there from or released from active duty therein, and who are qualified to perform the work to which the employment relates, and, secondly, to citizens of the Commonwealth generally, and, if such cannot be obtained in sufficient numbers, then to citizens of the United States.

### VI. RIGHT OF ACCESS

A designee of the City shall have the right of access to the construction site.

### VII. COMPLIANCE WITH REQUIREMENTS

The contractor shall comply with the provisions of Executive Order No. 227 amending and revising Executive Order No. 74, as amended by executive Order No. 16 dated May 1, 1975 and of Chapter 151B as amended, of the Massachusetts General Laws, both of which are herein incorporated by reference and made part of this contract.

### VIII. NON-DISCRIMINATION

The Contractor, in the performance of all work after the award, and prior to completion of the contract work, will not discriminate on the grounds of race, color, religious creed, national origin, age, sex, or handicap in employment practices, in the selection or retention of other contractors or in the procurement of materials and rentals of equipment.

**IX. SOLICITATIONS FOR SUBCONTRACTORS, AND FOR THE PROCUREMENT OF MATERIALS AND EQUIPMENT**

In all solicitations either by competitive bidding or negotiation made by the Contractor either for work to be performed under a subcontract or for the procurement of materials or supplies, each entity solicited shall be notified in writing by the contractor of the Contractor's obligation under this contract relative to non-discrimination and affirmative action.

**X. CONTRACTOR'S CERTIFICATION**

Contractors bidding as General Contractors or Filed Sub-contractors shall certify that they will comply with the minority and women manpower and business enterprise goals and specific affirmative action steps contained in this Supplemental Equal Employment Opportunity Anti-Discrimination and Affirmative Action Program by signing and submitting with the bid the **Affidavit of Acknowledgement and Certification of Compliance, Form E00-101**.

**If any Contractor subcontracts any portion of the work, the Contractor is required to obtain from each Subcontractor, regardless of tier, an Affidavit of Acknowledgement and Certification of Compliance, Form E00-101 stating that it will comply with the minority and women subcontracting and manpower ratios and specific affirmative action steps contained in this Supplemental Equal**

Employment Opportunity Anti-Discrimination and Affirmative Action Program by signing this form and submitting it to the Contractor for submission to the awarding authority not later than five working days following the opening of the bids.

**XI. COMPLIANCE – INFORMATION, REPORTS, AND SANCTIONS**

1. The Contractor will provide all information and reports required by the City on instructions issued and will permit access to its facilities and any books, records, accounts and other sources of information which may be determined by the City to affect the employment of personnel. This provision shall apply only to information pertinent to the City's supplementary affirmative action contract requirements. Where information required is in the exclusive possession of another who fails or refuses to furnish this information, the Contractor shall so certify to the City and shall set forth what efforts have been made to obtain the information.
2. Whenever the City believes the Contractor may not be operating in compliance with the terms of this Section, the City directly, or through its designated agent, shall conduct an appropriate investigation, and confer with the parties, to determine if such Contractor is operating in compliance with the terms of this Section. If the City or its agent finds the Contractor not in compliance, it shall make a preliminary report of non-compliance and notify such Contractor in writing of such steps as will in the judgment of the City or its agent bring such Contractor into compliance. In the event that such Contractor fails or refuses to fully perform such steps, the City shall make a final report of non-compliance, and recommend the imposition of one or more of the sanctions listed below. If, however, the City believes the Contractor has taken or is taking every possible measure to achieve compliance, it shall not make final a report on non-compliance. Within fourteen (14) days of the receipt of recommendations of the City, the

administering agency shall move to impose one or more of the following sanctions, as it may deem appropriate to attain full and effective enforcement.

- a. The recovery by the administering agency from the Contractor of 1/10 of 1% of the contract award price or \$1000.00, whichever sum is greater, in the nature of liquidated damages or, if a Subcontractor is in non-compliance, the recovery by the administering agency from the Contractor as a back charge against the Subcontractor of 1/10 of 1% of the subcontract price, or \$400.00, whichever sum is greater, in the nature of liquidated damages, for each week that such party fails or refuses to comply;
  - b. The suspension of any payment or part thereof due under the contract until such time as the Contractor or any Subcontractor is able to demonstrate compliance with the terms of the contract;
  - c. The termination, or cancellation, of the contract, in whole or in part, unless the Contractor is able to demonstrate within a specified time his compliance with the terms of the contract;
  - d. The denial to the Contractor of the right to participate in any further contracts awarded by the administering agency for a period of up to three years.
3. If at any time after the imposition of one or more of the above sanctions a Contractor is able to demonstrate that he/she is in compliance with this section, he/she may request the administering agency in consultation with the City, to suspend the sanctions conditionally, pending a final determination by the City as to whether the contractor is in compliance. Upon final determination, based on the recommendations of the adjudicatory body, the City shall either lift the sanctions or reimpose them.
4. Sanctions enumerated under Section XII-2 shall not be imposed except after an adjudicatory proceeding, as that term is used in M.G.L. Chapter 30, has been conducted. No investigation by the City or its agent shall be initiated without prior notice to the Contractor.

## **XII. SEVERABILITY**

The provisions of this Section are severable, and if any of these provisions shall be held unconstitutional by any court of competent jurisdiction, the decisions of such court shall not affect or impair any of the remaining provisions.

## **XIII. WAIVER**

The City of Worcester reserves the right to waive any stipulation in the M/WBE Program when deemed necessary or appropriate for the general good of the City and its programs.

## **DEFINITIONS**

Contractor - Except where otherwise specifically stated the term "Contractor" shall mean any General Contractor

City - is the City of Worcester, Massachusetts

M/WBE – is A Minority and Women Business Enterprise as certified by the State Office of Minority and Women Business Assistance to be 51% or more minority or women owned and operated.

**RESPONSIBLE EMPLOYER ORDINANCE**  
and  
**MINORITY/WOMEN BUSINESS ENTERPRISE AND WORKER UTILIZATION**

---

FORM E00-D/103

**SUCCESSFUL BIDDER'S OBLIGATION TO PROCEDURES AND FORMS**

All successful bidders on City of Worcester construction projects will receive a package of procedures and forms that are to be used at specific times throughout the life of the project.

The following is a list of the documents that will be sent to successful bidders when this office is notified that a contract has been, or is about to be, executed.

**I. BUILDING TRADES – CONTACT LIST, E00-D/6**

When a contractor cannot fulfill the worker utilization percentages, the appropriate building trades locals may be contacted to request assistance in locating and engaging qualified workers.

**II. AFFIDAVIT OF ACKNOWLEDGEMENT and CERTIFICATION OF COMPLIANCE, (FOR SUBCONTRACTORS), E00-101**

If any portion of a project is to be subcontracted at any tier, each additional subcontractor shall complete this form and send it to the Contract Compliance Office within two business days of contract execution and PRIOR to beginning work on the project.

**III. TABLE OF PROJECTED SUBCONTRACTORS, E00-103**

The use of subcontractors at any tier shall be reported to the Contract Compliance Office on this form prior to the subcontractor beginning work on the project.

**IV. SUBCONTRACTOR'S CERTIFICATE OF INTENT TO PARTICIPATE, E00-104**

Each Non-Filed subcontractor engaged to work a project shall complete and forward this form to the Contract Compliance Office prior to beginning work on the project.

**V. QUARTERLY PROJECTED WORKFORCE TABLE, E00-105**

Each General Contractor, Filed Subcontractor and Non-Filed Subcontractor, regardless of tier, shall complete and forward this form to the Contract Compliance Office prior to beginning work and again for each additional three month period throughout the life of the project.

**VI. REQUEST FOR MODIFICATION**

**E00-106B, MINORITY AND WOMEN BUSINESS UTILIZATION**

**E00-106C, MINORITY AND WOMEN UTILIZATION IN THE WORK FORCE**

Any General Contractor, Filed Subcontractor or Non-Filed Subcontractor, regardless of tier, not meeting the minority and women goals, may file a request for modification after having exhausted all possible sources.

Requests for modification are considered ONLY after attempts to fulfill these mandates have been documented and submitted to the Contract Compliance Office with the appropriate sections of this form.

A modification or waiver will not be granted because a contractor wishes to use an existing workforce that does not achieve the goals of 10% of total work hours to be worked by minorities and 5% of total work hours to be worked by women; and,

If subcontracting, does not meet the goals of 10% of the contract value for Minority Business Enterprises and 5% of the contract value to Women Business Enterprises.

**VII. INITIAL STATEMENT and CERTIFICATION OF COMPLIANCE WITH THE RESPONSIBLE EMPLOYER ORDINANCE, REO-101 (Pages 1 & 2)**

General Contractors, Trade Contractors, Filed Subcontractors and Subcontractors complete and submit this form as part of their bid on all City of Worcester construction projects subject to the provisions of G.L. Chapter 149 and Chapter 149A.

The REO requirements are applicable under Chapter 149 to contracts of \$100,000 or more. Under Chapter 149A the requirements are applicable only to contracts \$5M and above.

Note: Under the September 2012 revision of the REO, there is no minimum threshold for subcontractors. Hence all subcontractors, i.e., Trade Contractors, Filed Subcontractors and Non-Filed Subcontractors at every tier must comply with the requirements of the REO

The General Contractor shall forward all Trade Contractor's, Filed Subcontractor's and Subcontractor's REO-101 Forms and REO evidence to the Contract Compliance Office for approval, PRIOR to said subcontractors beginning work.

**VIII. WEEKLY STATEMENT AND CERTIFICATION OF COMPLIANCE WITH THE RESPONSIBLE EMPLOYER ORDINANCE, REO-102**

At the end of each week of work, ALL Contractors, Trade Contractors, Filed Subcontractors, and Non-Filed Subcontractors regardless of tier, subject to the provisions of G.L. Chapter 149 and Chapter 149A, shall complete and submit this form along with their certified payroll reports to the Contract Compliance Office.

**IX. INITIAL STATEMENT AND ADDITIONAL CERTIFICATION OF COMPLIANCE WITH THE RESPONSIBLE EMPLOYER ORDINANCE, REO-103**

General Contractors, Trade Contractors, Filed Subcontractors and Subcontractors complete and submit this form as part of their bid on all City of Worcester construction projects subject to the provisions of G.L. Chapter 149 and Chapter 149A.

If any portion of a project is to be subcontracted at any tier, each additional subcontractor shall complete this form and send it to the General Contractor who, in turn will transmit this form to the Contract Compliance Office within two business days of contract execution and PRIOR to the subcontractor beginning work on the project.

**SOUTH HIGH COMMUNITY SCHOOL  
DOCUMENT 009500 REO & MBE/WBE & WORKER UTILIZATION**

---

**X. WEEKLY CERTIFIED PAYROLL REPORT and WEEKLY  
WORKFORCE UTILIZATION REPORT.**

At the end of each week of work, all Contractors, Filed Subcontractors, and Non-Filed Subcontractors, regardless of tier, shall complete and submit these forms to the Contract Compliance Office.

The Contract Compliance Office will also accept computer generated payroll reports. However, if the computer payroll does not reflect the prevailing wage, the Contractor must provide a breakdown of the benefits paid to each employee which when added to the base wage equals the prevailing wage.

Section 01 10 00  
SUMMARY

PART 1 - GENERAL

1.1 Summary

- a. Project description.
- b. Project's environmental goals.
- c. Hazardous materials.
- d. Definitions – Owner, Owner's Project Manager, Construction Manager and Architect.
- e. Work by Owner.
- f. Owner early occupancy.
- g. Project Manual formats and conventions.

1.2 Project description

- a. Work covered by Contract Documents: Early Site Enabling Bid Package #1. The scope of work for this package includes the following items as indicated on the Drawings:
  - 1. Install and maintain erosion controls throughout the site.
  - 2. Construct paved construction access road (including related segmental retaining wall, drainage, plantings and permanent fencing) from Apricot Street around SW side of existing building.
  - 3. Construct stabilized construction entrances at Apricot Street and at end of lower Sullivan MS parking lot.
  - 4. Construct temporary parking, drainage and accessible route/entry in existing bus loop area.
  - 5. Salvage and store or relocate existing memorial plaques, stone markers, benches, playground equipment, plantings, flag pole and utility poles.
  - 6. Construct paved temporary parking at west edge of existing lower Sullivan MS lot.
  - 7. Construct temporary parking, bus turn-around, drainage and accessible route/entry at NW side of existing building.
  - 8. Cut/cap existing water service and provide new fire hydrant near NW corner of building.
  - 9. Demolish miscellaneous existing site improvements including site drainage, fencing and gates, planters, paving, trees and shrubs, concrete barriers and stone retaining wall.
  - 10. Provide construction fencing, gates, temporary barriers, temporary stair, project sign, directional signage, etc. for return of students and staff/faculty in August 2018.
  - 11. Provide temporary lighting in areas to be utilized by the School District including parking lots, driveways, sidewalks and pathways.
  - 12. Mobilize onsite and provide temporary facilities.
  - 13. Provide as-built documents of completed Site Enabling Bid Package construction.
  - 14. Other:
    - a) Work included beyond the Contract Limits: Protection and replacement of abutting sidewalks and roadways in public way, and on adjacent properties.
    - b) Completeness: The Work shall be as shown on the Drawings and be complete in

every respect and in conformance with all applicable requirements of the governing laws and codes.

b. Schedule:

1. Contract time: The Construction Manager may begin on-site work on, or after receipt of a written Notice to Proceed, or suitable Letter of Intent. After commencement of work, the Construction Manager shall pursue the Work continuously and with diligence, and bring the Project to Substantial Completion prior to date stipulated in Owner-Construction Manager Agreement.
2. Refer to the Construction Manager's instructions to bidders for bid due date.
3. The site will be available to the Contractor on June 22, 2018, or the day after the last day of school, whichever is later.
4. The work shall be substantially complete by August \_\_, 2018, or the first day of school, whichever is earlier.
  - a) Substantial completion is the stage in the progress of the Work when the work or designated portion thereof is sufficiently complete in accordance with the Contract Documents so the Owner can occupy or utilize the Work for its intended use. This includes any and all permits required by governmental agencies necessary for occupancy and use.
5. Permitting with the Worcester Conservation Commission is ongoing and it is anticipated that an Order of Conditions will be issued prior to June 22, 2018.
6. Construction documents for Sitework Bid Package #2, the scope of which includes all remaining Sitework besides this package, are expected to be issued for bidding on August 30, 2018.
7. Construction documents for Structural Bid Package #3, the scope of which includes all concrete foundations and structural steel, are expected to be issued for bidding on November 22, 2018.
8. Construction documents for Trade Contractor Bid Package #4, the scope of which includes all remaining work, are expected to be issued for bidding on January 17, 2019.

c. Project Address:

South High Community School  
170 Apricot Street  
Worcester, MA 01603

- d. Building Permits: Construction Manager is responsible to ensure all required permits are obtained, and that the work pertaining to permits is properly inspected and certified. Trade Contractors are required to obtain permits relating to their work.
- 1). Building permit fees have been waived by the City of Worcester. Individual permit fees associated with the work of Trade Contractors and subcontractors are the responsibility of the Trade Contractor performing the work of in the case of subcontractors the Construction Manager.

- 2). All costs associated with utility charges related to the construction of the building are the responsibility of the Construction Manager including but not limited to electrical, water and sewer, natural gas, etc.

### 1.3 Project Environmental Goals

- a. Overview of the environmental requirements for the Project: The Owner has established the environmental goal to construct a "green" building integrating the Owner's environmental operational mission into the Project.
  - 1). The Owner's environmental goals for the Project includes participation in the LEED™ (Leadership in Energy and Environmental Design) Program for "SILVER" Certification under the United States Green Building Council's LEED Rating System, LEED v.4 S (Schools).
    - a). Refer to Section 01 81 13 - SUSTAINABLE DESIGN REQUIREMENTS regarding special administrative and procedural requirements related the Owner's LEED goals.
    - b). Individual Specification Sections have additional detailed requirements.

### 1.4 DEFINITIONS – OWNER, Owner's Project Manager, Architect, and construction manager

- a. Wherever the term "Owner" is used in this specification, it refers to:

City of Worcester  
455 Main Street, Room 309  
Worcester, Massachusetts 01608
- 1). The terms "Owner" and "Awarding Authority" as used in the Project Manual have the same meaning and are interchangeable in Contract Documents. Both terms refer to the same entity.
- 2). Important Tax Note: OWNER is a non-profit organization and exempt from certain taxes. It is therefore required that the Construction Manager and all Subcontractors purchasing taxable goods or services make known to suppliers that tax-exempt status of the Owner, in order that such taxes will not be applied to the goods under Contract. In the event that such taxes are paid on any items, the Construction Manager shall obtain rebates for the taxes and reimburse the Owner in the full amount by change order. The Owner will provide the necessary evidence and certificates of its tax-exempt status upon request of those concerned. The most prevalent taxes concerned are:
  - a). Federal Excise Taxes as applied to articles which are taxable under Chapter 32 of the Internal Revenue Code of 1954, as amended. The Owner's Excise Tax Exemption Certificate Number is applicable.
  - b). Sales and Use Tax imposed by the Commonwealth of Massachusetts: The Owner has been assigned Exemption Certificate Number E-046-001-076 with respect to leases, rental, or purchase of "tangible personal property", including building materials and supplies, subject to the Massachusetts Sales and Use Tax. This exemption does not apply to any equipment leased or rented by the Construction Manager for his own use on the construction of the Project.
  - c). Sales and Use Tax imposed by the states where the Owner does not have exemption status: The Owner may choose to apply for tax exemption status in other states where major building materials and supplies are being purchased. In the event that the Owner obtains exemption status after bids are received, the Construction Manager shall adjust the Stipulated Sum by change order, for the

amount equal to the scheduled taxes that were included in the Construction Managers Bid.

- d). Fines and Penalties: Construction Manager and subcontractors are fully responsible for payment of all penalties and fines assessed by authorities having jurisdiction for improper and illegal use of Owner's tax exemption certificate number.
- 3). All papers required to be delivered to the Owner shall, unless otherwise specified in writing to the contrary, be delivered to the office of the Architect:
- b. Wherever the term "Owner's Project Manager" is used in the Contract Documents, it refers to:
  - CBRE/Heery
  - 80 Blanchard Road, Suite 108
  - Burlington, Massachusetts 01803
- c. Wherever the term "Architect", "Designer", or "Architect/Engineer", is used in the Contract Documents, it refers to:
  - Lamoureux Pagano & Associates
  - 108 Grove Street, Suite 300
  - Worcester, Massachusetts 01605
- d. Wherever the term "Construction Manager", "Contractor, or "General Contractor", is used in the Contract Documents, it refers to:
  - Fontaine Brothers Inc.
  - 510 Cottage Street
  - Springfield, Massachusetts 01104
- 1). The terms "Construction Manager", "General Contractor" and "Contractor" as used in the Project Manual have the same meaning and are interchangeable in Contract Documents. Both terms refer to the same entity.

#### 1.5 Work by Owner

- a. Related work under separate agreements: The Owner will award a separate contract which will commence prior to or during the work of this Contract; which in general includes:
  - 1). Testing Laboratory Services.
- b. Owner Furnished - Construction Manager Installed (OFCI) Products: The Construction Manager shall install the following Owner furnished items.
  - 1). NA
- c. Owner Furnished and Installed (OFI) Products: The Construction Manager has coordinating responsibility for the following work, provided by others under separate agreement(s) with the Owner:
  - 1). NA

#### 1.6 Products requiring long lead time

- a. Several products specified in individual specification sections are "long lead time" products and thus require advance ordering. For the following categories of work, affirm early purchase orders under the requirements of Section 01 32 00 – Construction Progress Documentation.
  - 1). Segmental retaining wall

## 1.7 PROJECT MANUAL FORMATS AND CONVENTIONS

- a. Project Manual Format: The Project Manual is organized into Divisions and subdivided into Sections and Documents using Construction Specification Institute (CSI) publication "MasterFormat, 2004 Edition" numbering system.
  - 1). Section Identification: Six/Eight digit Section numbers are utilized and cross-referenced throughout the Contract Documents. Sections in the Project Manual are in numeric sequence; however, the sequence is incomplete because only those Section numbers which are applicable to this Project are used.
  - 2). Division One of the Project Manual governs procedural and administrative requirements of the Work. Division One requirements are applicable to all Sections and Documents in the Project Manual.
- b. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
  - 1). Abbreviated Language: Language used in the Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words implied, but not stated, shall be inferred as the sense requires. Singular words shall be interpreted as plural, and plural words shall be interpreted as singular as applicable to the context of the Contract Documents.
  - 2). Imperative mood and streamlined language is generally used in the Specifications. Requirements expressed in the imperative mood are to be performed by Construction Manager. Occasionally, the indicative or subjunctive mood may be used in the Section Text for clarity to describe responsibilities that must be fulfilled indirectly by Construction Manager or by others when so noted.
    - a). The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.

**PART 3 - EXECUTION**

3.1 SUBMITTALS

- A. Contractor shall submit a Project site and building logistics plan in accordance with the requirements of this Section. Schedule issued herein is a guide as to the minimal requirements, the CM shall further investigate and coordinate all the required items, and include associated costs of their and subcontractors work, outline and coordinate the responsibilities and work of the School, Utility Companies, and other parties involved in the complete construction and occupancy as part of the schedule.

3.2 LOGISTICS

- A. Prior to commencement of Work, Contractor shall prepare and submit to Architect/OPM/DPW/WPS a detailed Project site/building logistic plan, in same size and scale of Drawings, setting forth Contractor plan of Work relative to following, but not limited to, items:
  - 1. Hauling route shall be in accordance with local ordinances and the DEP Administrative Consent Order, a truck access route to and from Project site.
  - 2. The identification of any overhead wire restrictions for power, streetlighting, signal or cable.
  - 3. Protection of sidewalk pedestrians and vehicular traffic.

4. Project site fencing and access gate locations.
  5. Construction parking.
  6. Material staging or delivery areas.
  7. Material storage areas.
  8. Temporary trailer and storage locations.
  9. Temporary service location and proposed routing of all temporary utilities.
  10. Location of temporary or accessible fire protection
  11. Trash removal and location of dumpsters.
  12. Concrete pumping locations.
  13. Crane locations.
  14. Location of portable sanitary facilities.
  15. Mixer truck wash out locations.
  16. Traffic control signage.
  17. Perimeter and site lighting.
  18. Storm Water Pollution Prevention Plan – SWPPP
  19. Stockpile, or lay down areas.
  20. Security lighting.
  21. Egress plans, egress and emergency lighting plans
  22. Temporary utility connection and lighting, security, plans for all trades
  23. Weather Protection.
- B. Revised Project site and building logistic plan will be required to be updated for each identified phases of Work as set forth in this Section.
- C. Contractor is responsible for securing and/or obtaining all approvals and permits from authorities having jurisdiction relative to any activities set forth in Section 3.2.A. Construction work
- D. All work shall be done in accordance with NFPA 241, including all reviews with the AHJ, and section 1.3.4 "A safety program shall be included in all construction, alteration, or demolition contracts."
- E. Refer to General Conditions for work sequencing of all trades, work adjacent to occupied areas must be scheduled as not to interfere with the school's operations, all disruptive work of all trades shall be scheduled second shift. The school's schedule is critical to meet, all trades shall include in their bid, working weekends, second shifts as required to maintain the published schedule.

### 3.3 PHASING OF THE WORK

- A. Project will be constructed in separate Phases coordinated with the school calendar as described in this Section and indicated on the Drawings. Phasing will also delineate Work to be completed in each designated phase. Unless otherwise approved or directed by Owner, each phase shall be completed according to approved Baseline Schedule prior to commencement of next subsequent phase. Contractor shall incorporate and coordinate Work of Separate Work Contracts relative to this Project into the Phasing and Construction Schedule, follows is issued as a guideline for the CM.

PHASE #1 -June 2018-August 2018

1. Enabling Site Work
2. Installation of Erosion Control
3. Construction of parking areas, retaining wall, access around the school, separation of the school site from the construction areas. Refer to enabling bid documents for specifics
4. Maintenance of areas within the construction fence
5. Installation and reconfiguration of temporary site fence prior to start of school year

PHASE #1A - August 2018-November 2018

1. Enabling Site Work
2. Completion of retaining wall, completion of temporary paving within project site fence
3. Contractor to maintain all separations and access to the school site and the primary site access road

PHASE 2- November 2018 – June 2021

1. Building Construction
2. Substantial completion of building no later than June 1, 2021.
3. All site utilities completed for new building tied in and operational
4. Building commissioning

PHASE 2A – June 2019 – August 2019

1. Installation of underground recharge system #1
2. Re-establish temporary parking over recharge system on existing school site and protect system on construction side
3. Install retaining wall and fence at existing building bus loop and make safe prior to start of school

PHASE 3A - June 2021 – August 2021

1. Disconnection of utilities at existing school and make safe
2. Abate and demolish school north of "Main Street"
3. Move the construction trailers and reconnect utilities
4. Install parking areas, roadways and walks at primary and secondary entrances
5. Final grading and paving
6. Landscaping
7. Relocate fill from onsite stockpiles and begin grading front of site
8. Maintain access to new school for owner occupancy and FF&E deliveries

PHASE 3B – June 2021 – July 2022

1. Complete abatement and demolition
2. Continue relocation of onsite stockpiles
3. Complete installation and connection of drainage systems
4. Begin final grading at athletic fields
5. Continue work on site retaining walls and other site improvements
6. Complete all remaining contract work
7. Final paving at remaining areas

8. Install remaining walks
9. Complete all landscaping and touch up work
10. Complete all site improvements

#### 3.4 PHASING OF THE WORK – GENERAL

- A. Owner will be impacted by not having all Work of each Phase completed within the indicated schedule and overall Project completed within the Contract Time. It is mandatory Work be complete within Phases and Contract Time.
- B. Site Contractor is responsible for snowplowing, maintaining access to all areas under their control. Landscaping Contractor is responsible for watering, maintenance, and mowing of all areas until accepted by the Owner. Owner is responsible for snowplowing, mowing and maintaining walkways, paths and fields under areas of their use and control.
- C. SUBCONTRACTORS RESPONSIBILITIES;  
Subcontractors to coordinate their work in accordance with the phasing plan of the CM, including the minimal items outlined in this and sub sections of the specifications and drawings. PHASING OF THE WORK
- D. General Requirements All Phases
  1. Egress and exit capacities must be established and maintained from all occupied areas, kept clearly labeled, including exit lights and emergency lights (installed, maintained and removed upon completion by the electrical contractor) during all occupied phases. Contractor to establish regular communications with representatives of the school, code department, Worcester Fire Department and Owner's representatives.
  2. Reference drawings and specification sections for areas and additional information and requirements.

#### 3.5 PHASING PLANS

Refer to the following Phasing Plans published here for reference. Refer to the electronic bid file for colored version at full size.

End of Section

---

Section 01 14 00  
WORK RESTRICTIONS

**PART 1 - GENERAL**

1.1 SUMMARY

- A. Use of Site.
- B. Access to Site.
- C. Work Sequencing.
- D. Workforce requirements.
- E. Hours for on-site operations and restrictions.
- F. Coordination with occupants.
- G. Worker Identification Badges
- H. Worker sex offender record information (SORI) Reporting and criminal offender record (CORI) reporting.
- I. Worker conduct, appearance and Work Rules.

1.2 RELATED REQUIREMENTS

- A. Document 00 73 00 – SUPPLEMENTARY INSTRUCTIONS TO BIDDERS: Additional project requirements and work restrictions.

1.3 USE OF SITE

- A. Use of, and access to, site will be subject to special requirements of the Owner, as directed.
  - 1. Prior to beginning the Work of this Contract, the Construction Manager shall meet with the Owner and the Architect to determine procedures regarding access and use of the site, locations and access to staging and storage areas, tree protection, temporary barriers and fencing, and any special site conditions or restrictions regarding the use of the site areas surrounding the construction.
  - 2. Use of Owner's receiving/shipping areas: Construction Manager is responsible to deliver and receive all materials and equipment. Construction Manager is not permitted to have supplies or equipment shipped directly to them in care of the Owner or Building Manager.
  - 3. Security: Owner access must be permitted at all times in all construction areas, for purposes of security.
- B. Confine operations to areas within Contract limits indicated on the Drawings. Portions of the site and building beyond areas in which construction operations are indicated are not to be disturbed.

1. Use of on-site areas outside of the contract limits for workers parking or storage of materials must be pre-arranged with Owner. Schedule deliveries to minimize requirements for storage of materials.
  2. There shall be no work or construction activity within the wetlands or the buffer areas refer to Document 00 31 26 - INFORMATION AVAILABLE TO BIDDERS WORCESTER CONSERVATION COMMISSION ORDER OF CONDITIONS and attachments.
- C. Keep all public roads and walks, and access drive to facility clear of debris caused by this Work during building operations.

#### 1.4 ACCESS TO SITE

- A. The Owner intends to occupy parking areas and access roads during construction. Notify the Owner of work which will affect the use of these areas; coordinate work schedule with Owner. The Construction Manager shall consult with the Owner on the best ways to provide access and on changes to access areas as the work progresses.
- B. Keep all public roads and walks, and access drive to facility clear of debris caused by this Work during building operations.

#### 1.5 COORDINATION WITH OCCUPANTS

- A. General: Perform all work in such a manner as to prevent interference with the Owner's operation of the facility, nor endanger the health, safety and well being of the facility's staff and students.
1. Take all measures to insure the safety of students, staff and the general public. The Construction Manager must take every reasonable precaution and employ all necessary measures including extra cleaning, special supervisory personnel, and additional temporary barriers and signage to facilitate the clean, quiet, safe, and continual operation of the facility.
  2. The work will be done in an occupied building active site accessible to the public. It is imperative that the Construction Manager, its subcontractors and all their personnel treat the staff and students with consideration and respect. No unnecessary noise or disruption of the academic or social activities of the school will be permitted.
- B. Interruption of services: Any major work entailing disruption to heating, lighting, life safety system utility connections or other similar major disruption to building functioning must be coordinated with the Owner, and temporary services, safety precautions, or connections provided. Do not shut down any service without approval of the Owner.
1. Provide both Owner and Architect with 72 hour (3 work days minimum) notification for any disruption of service; provide notification for connecting, disconnecting, turning on or turning off any service which may affect Owner's operations.
  2. Provide 48 hour (2 work days minimum) notice to local fire department of disruptions in electrical services, fire alarm services and emergency power services.
  3. Any action either planned or unplanned, by the Construction Manager which impairs the operation of anyone or the activation of the fire alarm detection

and or suppression system shall cause notification of the appropriate party. In case of unplanned, accidental, impairment, the Construction Manager will immediately notify the Owner. The Construction Manager should be prepared to provide assistance as required to correct the problem.

#### 1.6 WORK FORCE REQUIREMENTS

- A. The Construction Manager acknowledges the stringent requirements of the Owner with respect to the dates of Substantial Completion for various Portions of the Work, and recognizes that the construction schedule may require that work proceed on an accelerated basis. The Construction Manager further acknowledges that requirements related to items such as safety, service to Owner occupied areas, or Construction Manager access to Owner occupied areas may mandate that some operations be performed only after "normal school hours" or other occupancy hours. The Construction Manager therefore agrees that the Work of his own forces and of his subcontractors, including all Trade Contractors, shall be performed on an overtime and/or double-shift basis if and to the extent necessary in order that the construction schedule be met.
- B. Neither overtime nor double-shift work shall be grounds for any claims for compensation to the Construction Manager or to any Trade Contractor or subcontractor. If the nature of overtime or double-shift work requires that the Owner provide personnel to operate the facility at times when they would not normally be present, such personnel costs shall be borne or reimbursed by the Construction Manager.
- C. Restricted access hours (Closed Gate Period): Access to the school and site is prohibited during school bus drop off and pick-up hours. No construction deliveries, vehicular traffic, or hauling away may occur at the site during School bus drop-off and pick-up times which are 7:00 AM to 7:30 AM, and 1:30 PM to 2:30 PM. The Construction Manager shall coordinate with the Owner Project Manager and Awarding Authority to determine exact times and durations for restricted access hours.
  - 1. All gates to Construction site shall be closed during the above specified time periods.
  - 2. No vehicles (except fire, police and rescue) may enter or exit the construction site during the above time periods.
  - 3. Any vehicle which arrives at the school during the "Closed Gate" time must move to a location acceptable to the Owner. No vehicles will be allowed to idle on the project site, or any other nearby street. The Construction Manager shall be responsible for enforcing this requirement.
- D. School vacation dates: School vacation schedule is listed under Information Available for Bidders. The Construction Manager is required to coordinate with the Owner's Project Manager prior to scheduling Work during vacation dates.
- E. Winter Conditions: The Owner and Construction Manager recognize that time is of the essence for completion of this Contract and agree to continue work throughout the winter months without delay.
- F. Municipal Authority: The Construction Manager shall comply with all local ordinances, including those with respect to work start, finish, and weekend work.

- G. None of the requirements herein shall be construed as relieving the Construction Manager of his responsibility to conduct his operations in conformance with local ordinances or requirements established by authorities having jurisdiction.

#### 1.7 HOURS FOR ON-SITE OPERATIONS AND RESTRICTIONS

- A. Hours of operation and restrictions:
  - 1. Hours of construction, 7:00 AM to 5:00 PM local time, Monday to Friday. Provisions for working hours other than those specified, must be pre-arranged with the Owner.

#### 1.8 WORKER CRIMINAL OFFENDER RECORD (CORI) REPORTING

- A. Sex Offender Record Information (SORI) Reporting and Criminal Offender Record Information (CORI) Reporting. In accordance with MGL c6 §178 and c71 §38R respectively, the School Superintendent or School Principal will require sex offender record information ("SORI") and criminal offender record information ("CORI") from the criminal history systems board, relating to any worker who is scheduled to work on any portions of the school property. The Construction Manager, Trade Contractors and subcontractors shall make every effort to provide the Owner's Project Manager with a list of the proper paperwork at least two weeks before any workmen who they anticipate will be on site. All approved workers on the project shall wear visible I.D. badges at all times. The Construction Manager shall be responsible for issuing these badges and enforcing this requirement. Workers failing to display their I.D. badges will be removed from the site. The Owner reserves the right to stop work if there has been a failure to comply with this paragraph, in which event the Construction Manager, Trade Contractors and subcontractors shall have no claim for damages, delay or time extensions against the Owner.
  - 1. Refer to the Worcester Public Schools CORI Request Form included at the end of this Section. Coordinate reporting requirements with Document 00 73 00 - Supplementary Instructions to Bidders

#### 1.9 WORKER IDENTIFICATION BADGES

- A. Provide an identification badge (ID card) to each worker, materials supplier and vendor authorized to enter premises.
  - 1. All personnel on site shall visibly wear an identification badge issued by the Construction Manager.
    - a. All construction personnel on-site shall be issued and wear a identification badge.
    - b. Delivery and Vendor Personnel who are on site only for deliveries shall be issued a temporary visitor's ID card which shall be returned to the Construction Manager when leaving the site.
    - c. Authorized Visitors who are on site for meetings, inspections and similar activities, shall be issued a temporary visitor's ID card which shall be returned to the Construction Manager when leaving the site.
  - 2. Identification badges and visitor badges shall be in format, color and size approved by Owner.
  - 3. Personnel identification badges to include: Personal photograph, name and assigned number, expiration date, and employer.

4. Return of identification badges:
    - a. Require return of personnel identification badges at expiration of employee contribution to the Work.
    - b. Temporary ID cards shall be issued and returned on a daily basis.
  5. All construction personnel are required to wear their issued identification badge at all times when on school grounds.
- B. Maintain a list of accredited persons having identification cards, submit copy directly to Owner upon request.
1. Include in list, employee name, assigned number, date of issue, expiration date, and employer.

#### 1.10 WORKER CONDUCT, APPEARANCE AND WORK RULES

- A. General Conduct and Demeanor: All construction workers shall treat all other workers, Owner staff, student and the public with respect and courtesy.
1. The conduct and appearance of each worker at the job site is of paramount importance. The Owner reserves the right to require any worker to be banished from the Site.
- B. Privacy: Conduct all work of the Contract with the maximum effort to maintain the privacy of the Owner's operations, staff, and students. Do not permit the workers to peer into other areas of the building visible from the work area. Invasion of privacy is a major infraction of the work rules.
- C. Physical Appearance: Require each worker to dress appropriately in a clean, neat, and professional manner.
1. Sleeved shirts and long pants are required minimum clothing. Short sleeved shirts may not be rolled up. Shirts may not be rolled up at the waist. Pants may not be rolled up past the top of the boots or shoes worn. Anyone not in compliance is subject to immediate dismissal.
- D. Entertainment Devices (including, but not limited to radios, CD players, MP3 players and televisions): The use of all entertainment devices, including portable listening devices (ipod™ type) with headphones or earphones, is strictly prohibited at all times.
1. Construction Manager shall control the volume of all communication radios and loudspeakers to avoid creating a nuisance.
- E. Medications and Drugs: Do not allow any drugs or mood-altering substances, except for qualified, legal prescriptions; when requested, allow inspection of prescription drugs.
- F. Smoking: Smoking is strictly prohibited on school property.
- G. Language: Foul and rude language is strictly prohibited.
- H. Physical Actions: Running, horseplay, fighting, and other unprofessional conduct is prohibited. Fighting is a major infraction of the work rules.

- I. Stealing: Stealing of any materials, objects, furnishings, equipment, fixtures, supplies, clothing, or other items will not be tolerated and is a major infraction of the work rules.
- J. Sexual Harassment: All forms of physical and verbal sexual harassment will not be tolerated and is a major infraction of the work rules. Sexual harassment includes, without limitation: touching, whistling, sexually explicit stories, jokes, drawings, photos and similar representations, exhibitionism and all other sexually oriented offensive behavior.
- K. Warnings and Dismissal:
  - 1. For minor infractions of the rules, the Owner may issue a warning. Only one warning will be allowed per worker. A second infraction will result in immediate dismissal of the worker from the Site.
  - 2. For major infractions of the rules, the worker shall be dismissed immediately without warning and is subject to possible criminal prosecution.
- L. Notification of Workers: Clearly notify and educate each worker about these Work Rules and the requirements for worker conduct and appearance.
  - 1. Recommendation: The Owner recommends that the Construction Manager notify each worker of the work rules in writing and obtain a signed acknowledgment of the worker's understanding of the work rules as a condition of employment on this project.

#### 1.11 PROJECT PHASING

- A. Refer to Document 01 12 00 – PROJECT PHASING REQUIREMENTS and Document 07 30 00 - SUPPLEMENTARY INSTRUCTIONS TO BIDDERS.

#### **PART 2 - PRODUCTS** (Not Used)

#### **PART 3 - EXECUTION** (Not Used)

End of Section

## **SECTION 011500**

### **CONTROL OF SITE, WORK AND MATERIALS**

#### **PART 1 GENERAL**

##### **1.1 GENERAL PROVISIONS**

- A. Attention is directed to the CONTRACT AND GENERAL CONDITIONS and all Sections within DIVISION 1 - GENERAL REQUIREMENTS, which are hereby made a part of this Section of the Specifications.

##### **1.2 SUMMARY**

- A. This section is intended to provide information on topics which are not necessarily mentioned elsewhere in the Contract Documents as follows:

1. Hauling, Handling and Storage of Materials
2. Open Excavations
3. Care and Protection of Property
4. Protection and Relocation of Existing Structures and Utilities
5. Discovery.
6. Sanitary Regulations
7. Safety and Health Regulations
8. Site Investigation
9. Hazardous Waste
10. Borings and Subsurface Data and Geotechnical Data.
11. Existing conditions plan/topographical survey.
12. Permits.
13. Work sequence scheduling and coordination.
14. Work hours.
15. Work conditions.
16. Contractor's Project Team.
17. Owner's Project Manager's Representative
18. Contractor's use of premises.
19. Noise, dust, and pollution control.
20. Maintenance of traffic.
21. Contractor's use of city streets.
22. Noise, dust and pollution control.
23. City of Worcester ordinance, licenses, permits and fees.
24. Rejected materials and defective work.

- B. Related Requirements:

Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to the following:

1. Document GENERAL CONDITIONS and SUPPLEMENTARY CONDITIONS.
2. Section 01500, Construction Facilities and Temporary Controls.
3. Section 01569, Tree and Plant Protection.
4. Section 01571, Erosion and Sediment Control.

### **1.3 HAULING, HANDLING AND STORAGE OF MATERIALS**

- A. The Contractor shall, at his own expense, handle and haul all materials furnished by him and shall remove any of his surplus materials at the completion of the work.
- B. The Contractor shall provide suitable and adequate storage for equipment and materials furnished by him that are liable to injury and shall be responsible for any loss of or damage to any equipment or materials by theft, breakage, or otherwise.
- C. All excavated materials and equipment to be incorporated in the Work shall be placed so as not to injure any part of the Work or existing facilities and so that free access can be had at all times to all parts of the Work and to all public utility installations in the vicinity of the work. Materials and equipment shall be kept neatly piled and compactly stored in such location as will cause a minimum of inconvenience to public travel and adjoining owners, tenants and occupants.
- D. The Contractor shall be responsible for all damages to the work under construction during its progress and until final completion and acceptance even though partial payments have been made under the Contract.

### **1.4 OPEN EXCAVATIONS**

- A. All open excavations shall be adequately safeguarded by providing temporary barricades, caution signs, lights and other means to prevent accidents to persons, and damage to property. The Contractor shall, at his own expense, provide suitable and safe means for completely covering all open excavations and for accommodating travel when work is not in progress.
- B. The length of open trench will be controlled by the particular surrounding conditions but shall always be confined to the limits length that can be backfilled by the end of each work day.
- C. If the excavation becomes a hazard, or if it excessively restricts traffic at any point, then special construction procedures shall be taken, such as limiting the length of trench and prohibiting stocking excavated material in any neighborhood street.

- D. All street excavations shall be completely closed at the end of each work day. Backfilling or use of steel plates of adequate strength to carry traffic shall be used.

## **1.5 CARE AND PROTECTION OF PROPERTY**

- A. The Contractor shall be responsible for the preservation of all public and private property, and shall use every precaution necessary to prevent damage thereto. If any direct or indirect damage is done to public or private property by or on account of any act, omission, neglect, or misconduct in the execution of the work on the part of the Contractor, such property shall be promptly restored by the Contractor, at his expense, to a condition similar or equal to that existing before the damage was done, to the satisfaction of the Owner.
- B. Work Limits with Restrictions:
  - 1. The Plans clearly define areas of the site that are subject to work restrictions.

## **1.6 PROTECTION AND RELOCATION OF EXISTING STRUCTURES AND UTILITIES**

- A. All existing buildings, utilities, pipes, poles, wires fences, curbs, property line markers and other structures which the Architect decides must be preserved in place without being temporarily or permanently relocated, shall be carefully supported and protected from damage by the contractor. Should such property be damaged, it shall be restored by the Contractor, at no additional cost to the Owner.
- B. The Contractor shall determine the location of all underground structures and utilities (including existing water services, drain lines, electrical lines, and sewers). Services to buildings shall be maintained, and all costs or charges resulting from damage thereto shall be paid by Contractor.
- C. On paved surfaces the Contractor shall not use or operate tractors, bulldozers, or other power-operated equipment with treads or wheels which are shaped so as to cut or otherwise damage such surfaces.
- D. All property damaged by the Contractor's operations shall be restored to a condition at least equal to that in which it was found immediately before work was begun and to the satisfaction of the Owner. Suitable materials and methods shall be used for such restoration.
- E. Restoration of existing property and structures shall be carried out as promptly as practicable and shall not be left until the end of the construction period.

## **1.7 DISCOVERY**

If during the demolition, excavation, disposal, or other work, articles of unusual value, or of historical or archaeological significance are encountered, the ownership of such articles is retained by the Owner and information regarding their discovery shall be immediately furnished to the Architect. If the nature of the article is such that the work cannot proceed without danger of damaging same, work in that area shall be immediately discontinued until the Architect through the Owner's Project Manager, has decided the proper procedure to be followed. Any time lost thereby shall be condition for which the time of the Contract may be extended. All costs incurred after discovery in the salvaging of such articles shall be borne by the Owner.

## **1.8 SANITARY REGULATIONS**

- A. Sanitary conveniences for the use of all persons employed on the work, properly screened from public observation, shall be provided in sufficient numbers in such manner and at such locations as may be approved. The contents shall be removed and disposed of in a satisfactory manner as the occasion requires. The Contractor shall rigorously prohibit the committance of nuisances within, on or about the work. Any employees found violating these provisions shall be discharged and not again employed on the work without the written consent of the Architect. The sanitary conveniences specified above shall be the obligation and responsibility of the Contractor.

## **1.9 SAFETY AND HEALTH REGULATIONS**

- A. This project is subject to the Safety and Health regulations of the U.S. Department of Labor set forth in 29 CFR, Part 1926, and to the Massachusetts Department of Labor and Industries, Division of Industrial Safety "Rules and Regulations for the Prevention of Accidents in Construction Operations (454 CMR 10.0 et. seq.)." Contractors shall be familiar with the requirements of these regulations.

## **1.10 SITE INVESTIGATION**

- A. The Contractor acknowledges that he has satisfied himself as to the conditions existing at the site of the work, the type of equipment required to perform this work, the quality and quantity of the materials furnished insofar as this information is reasonably ascertainable from an inspection of the site, as well as from information presented by the drawings and specifications made a part of this contract. Any failure of the Contractor to acquaint himself with available information will not relieve him from the responsibility for estimating properly the difficulty or cost of successfully performing the work. The Owner or Architect and Sub-Consultants assumes no responsibility for any conclusion or interpretation made by the Contractor on the basis of the information made available by the Owner.

## **1.11 HAZARDOUS WASTE**

- A. Should the Contractor, while performing work under this contract, uncover hazardous materials, as defined in Massachusetts Hazardous Waste Regulations 310 CMR 30.00, he shall immediately notify the Architect. The Contractor is not, and has no authority to act as, a handler, generator, operator or disposer of hazardous or toxic substances found or identified at the site, and the Owner shall undertake all such functions.

#### **1.12 BORINGS, SUBSURFACE DATA AND GEOTECHNICAL DATA**

- A. The site has been extensively modified by a site preparation contract which included rock excavation and filling to new subgrade under the control of the Geotechnical Engineer.
- B. Survey, as built information and grade will be provided by the Civil Engineer and Geotechnical Engineer at completion of the Site Preparation Work.

#### **1.15 WORK SEQUENCE SCHEDULING AND COORDINATION**

- A. The Work shall be sequenced, scheduled, and coordinated to achieve the Date of Substantial Completion.
  - 1. Delivery and placement of new kitchen equipment for final connection to utilities under this contract.
- A. The Contractor and each Sub-Contractor shall establish and increase or decrease as appropriate the workforce, days of work, number of shifts, work hours, materials, tools and equipment needed to maintain and achieve the Date of Substantial Completion.
- B. The Contractor and each Sub-Contractor shall increase the workforce, days of work, number of shifts, work hours, materials, tools, and equipment needed to maintain the Date of Substantial Completion as necessary to accommodate any additional work authorized by Construction Change Directives and Change Orders modifications.
- C. The Contractor will be responsible for the proper conduct of the work to ensure that all trades work together, and in harmony, to achieve substantial and final completion as specified.

#### **1.16 WORK HOURS**

- A. Normal working hours are to be Monday thru Friday from 7:00 AM to 3:30 PM, except Legal Holidays. Any working hours outside of these times shall be considered "Extended Hours" and treated as described below. No equipment may be idled or have engines running prior to 7:00 AM.

- B. Extended work hours shall require prior scheduling and coordination with the Architect and Owner at a minimum of 48-hours in advance. Extended work hours on Sundays and Legal Holidays may also require a permit from the Police Department.
  - 1. Upon permission from the Architect and Owner, and prior to the start of any extended work, pay for all fees and obtain through the City of Worcester Police Department a work permit for all Sundays and Legal Holidays.

#### **1.17 WORK CONDITIONS**

- A. Neither the Contractor, nor Sub-Contractors at any level, nor their employees shall bring illegal substances or alcoholic beverages on the premises.
- B. Vulgar, abusive, obscene language or behavior will not be tolerated.
- C. Contractor's personnel engaging in the above shall be removed from the job-site.
- D. This building is smoke-free; therefore smoking is prohibited within the building

#### **1.18 CONTRACTOR'S PROJECT TEAM**

- A. The Contractor shall provide a full time Project Manager qualified for a project of this size and complexity, and having the skills necessary for working with people. Project Manager shall primarily be on site.
- B. The Contractor shall provide a qualified General Superintendent, who shall be present, full time, on site daily during all work in progress until the Date of Substantial Completion, and for such additional time thereafter as the Architect may determine. Only under extenuating circumstances, with the approval of the Architect and Owner, will the contractor be allowed to substitute for the General Superintendent prior to the date of Final Completion.
  - 1. The General Superintendent shall supervise and direct the activities of other superintendents and foremen on the site. He shall not perform the work of foremen, tradesmen, or home office staff.
- C. The Contractor shall employ a full time Scheduler.
  - 1. Refer to Section 01325, Project Progress Schedules, for specifics and Part 1.06 of same section for additional information.
- D. The Contractor shall employ a full time MEP and equipment coordinator.
  - 1. Refer to Section 01040, Project Coordination, for specifics.

- E. Each Filed Sub-bidder and each subcontractor shall provide a Lead Foreman, responsible to be on site full time during the workday.
  - 1. Each foreman, in addition to his regular duties shall be responsible for establishing, maintaining, and providing record drawings, which required to be updated prior to submitting the current periods draft Application for Payment.

The above personnel shall not be discharged or changed without prior written consent of the Architect, which will not be unreasonably withheld. The Contractor shall submit credentials of the Contractor's project team to the Owner's Project Manager for their approval.

#### **1.19 OWNER'S PROJECT MANAGERS REPRESENTATIVES**

- A. Reference within the Contract Documents to terms Owner's Representative and Owner's Project Manager shall mean the Owner's Project Manager, CBRE/Heery International.
  - 1. Reference within the Contract Documents to terms Owner's Representative and
    - 2. Cooperate: Fully and completely cooperate with the Owner's Project Managers.
    - 3. Personnel and Staffing Information: Provide the Owner's Project Manager with information on personnel currently working on the project. Identify for the Owner's Project Manager all persons at the site, both workers and visitors.
    - 4. Work Planned: At least every Monday morning, inform the Owner's Project Manager about the work expected to be done during the week.
    - 5. Unusual Conditions and Occurrences: Immediately notify the Owner's Project Manager about all unusual conditions and occurrences at the site.
- C. Owner's Observation of Construction Means, Methods, and Techniques: Means, methods, and techniques used in the work are the sole responsibility of the Contractor. If the Owner's Representatives determine that the means, methods, techniques, and materials used results in work which does not conform to the Contract Documents, the Owner's Representatives may notify the Contractor. The Contractor shall maintain an accurate and up-to-date log of all such notifications from the Owner's Representatives, and shall record the response action taken and the date and time when the Architect was consulted for additional clarification or direction. If the Contractor does not acknowledge or resolve the question, the Owner's Representatives will notify the Owner and Architect.
- D. Provide Field Offices for the Owner's Project Manager in accordance with Section "Temporary Facilities".
- E. Radio Communication: At all times work is in progress, provide and maintain at least two portable, lightweight, two-way radios with belt holsters for the sole use of the

Owner's Representatives. The radios shall be capable of using all the frequencies used by the Contractor's other on-site radios. Provide two desk-top battery chargers and at least two spare batteries.

Non-Standard Work House: Provide at least 5 day written prior notice to the Owner's Representatives for all work done during non-standard work hours such as overtime, weekends, and holidays, information be updated and current prior to granting consent.

## **1.20 CITY OF WORCESTER, ON-SITE PERSONNEL**

- A. The City of Worcester or the Owner's Project Manager may provide one or more on-site architects to expedite the work.
- B. The City of Worcester or the Owner's Project Manager may provide one or more on-site Clerk of Works to monitor and observe the work in conjunction with A, above.
- C. Provide field offices in accordance with Section "Temporary Facilities".
- D. Radio Communication: from "E" above.

## **1.21 CONTRACTOR USE OF THE PREMISES**

- A. After the Contractor's acceptance of the Phase 1 work the contractor shall have complete and exclusive use of the premises from date of contract to the date of substantial completion for execution of the Work within the Limits of Work indicated and shall coordinate use of the site with other contractors performing work for the Owner. Contractor's use of premises is limited only by the Owner's right to perform work with his own forces.
- B. Prior to beginning work of the Contract, the Contractor shall meet with the Owner's Project Manager and the Architect to determine procedures regarding access to and use of site, exterior staging, parking, and storage areas, tree protection, special site conditions, and any other restrictions regarding the use of the site areas surrounding the construction.
  - 1. Coordinate use of premises under direction of the Awarding Authority and the Owner's Project Manager.
  - 2. Assume full responsibility for the protection and safekeeping of Products under this Contract, stored on the site.
  - 3. Obtain and pay for the use of additional storage or work areas needed for operations.
  - 4. Move any stored Products, under Contractor's control, which interfere with operations of the Owner's Project Manager, Owner or separate contractor.

- C. Where work on public roads or walks, or other work on municipal property or easements is done, all such work shall conform to applicable portions of this Specification and the rules, regulations, and specifications of the public agencies having jurisdiction. Wherever work on a public street is done, a City of Worcester special duty police officer must be present unless changes in statutes and ordinances permit the use of flagmen. All permits and fees in relation to such off-site work shall be obtained and paid for by the General Contractor.
- D. The Contractor shall keep all public and private access roads and walks clear of debris caused by this work during the entire term of the Contract. He shall repair all public and private streets, drives, curbs, walks, and other improvements where disturbed by work of, or related to, building operations, leaving them in as good condition after completion of the work as before operations started, in accordance with rules, regulations, and specifications of the public agencies having jurisdiction. Repairs shall be made within 10 days of Completion of Work.
- E. Parking for workmen's personal vehicles shall be permitted only within the Contract Limit Lines on the Drawings. Parking on adjacent streets is not permitted.
- F. Access roads and fire-lanes on and about the site shall be kept open and free at all times, including public streets and access to private homes and roads.

## **1.22 MAINTENANCE OF TRAFFIC**

- A. Unless permission to close the street is received in writing from the proper City of Worcester authority, all construction work shall be conducted so that the existing pre-construction patterns of vehicular and pedestrian traffic may be maintained at all times.
- B. Should the Chief of Police deem it necessary, uniformed officers will be assigned to direct traffic. The Contractor shall make all arrangements in obtaining uniformed officers required.
- C. The Contractor shall at his own expense, as directed by the Police Traffic Control/Safety Officer, provide and erect acceptable barricades, barrier fences, traffic signs, and all other traffic devices not specifically covered in a bid item, to protect the work from traffic, pedestrians, and animals. He shall provide sufficient temporary lighting such as lanterns/flashers (electric battery operated) or other approved illuminated traffic signs and devices to afford adequate protection to the traveling public, at no additional cost to the Owner.
- D. The Contractor shall furnish all construction signs that are deemed necessary by and in accordance with Part VI of the Manual on Uniform Traffic Control Devices as published by the U.S. Department of Transportation. In addition, the Contractor may be required to furnish all special construction warning signs. Size and exact wording of signs shall be determined by the Owner's Project Manager during construction.

- E. The intent of policing is to insure public safety by direction of traffic. Police officers are not to serve as watchmen to protect the Contractor's equipment and materials.
- F. Nothing contained herein shall be construed as relieving the Contractor of any of his responsibilities for protection of persons and property under the terms of the Contract.

### **1.23 CONTRACTOR USE OF CITY STREETS**

- A. Contractor's personnel, and all other personnel employed on the project, shall park on the site only at the area designated for construction and as permitted by the Contractor. Contractors personnel may not park on city streets. Parking on street sidewalks is prohibited.
- B. Deliveries, Access, Parking or use of existing school driveway is strictly prohibited except for utility work and other work indicated along driveway. Contractor shall enforce this restriction as required and with the use of signage at the entrance of driveway and communication to all employees, Vendors, Suppliers, filed and non filed subcontractors etc.
- C. Driveway entrances, walks, and yards to abutting properties shall be kept unobstructed at all times.
- D. Off road vehicles can be used within the project limit lines.

### **1.24 NOISE, DUST, AND POLLUTION CONTROL**

- A. All work performed under the Contract shall conform to the requirements of Chapter III, Section 31C and Section 142D of the General Laws, Commonwealth of Massachusetts and Rules and Regulations adopted thereto by the Commonwealth of Massachusetts, Department of Public Health, and the requirements of local noise, dust, and pollution control laws, ordinances, and regulative agencies applicable to the work.
- B. The Contractor shall endeavor at all times to maintain as low a level of construction noise as practicable in order not to create a disturbance in the neighborhood or the adjacent residential premises.
- C. Noise control measures shall include as a minimum but not limited to
  1. Use of maintained properly muffled equipment.
  2. Provide muffled enclosures for all noise producing equipment.
  3. Use the least noisy construction techniques practical.
  4. Use of electric powered tools and equipment in lieu of air powered, engine powered, or generator powered tools and equipment.

5. Schedule noise producing activities to the shortest extent possible. No noise producing activities are allowed prior to 7:00AM including engines idling or running.
  6. Turn off all unneeded and idling equipment and engines.
  7. No radios or CD players or the like are allowed outside.
  8. Locate noise sources as far as possible from noise sensitive locations
- D. Any complaints duly registered by the Owner of unacceptable noise levels shall be cause for the use of special precautions and methods of operation by the Contractor to reduce noise to acceptable levels, at no additional cost to the Owner.
- E. The Owner's Project Manager shall be the sole judge of the tolerableness of noise levels.
- F. "Wheel Wash", Contractor shall provide all facilities for preventing spread of objectionable matter outside of the site areas through washing of vehicles and vehicle wheels, decontamination of vehicles transporting hazardous waste containing materials and all other means necessary.
- G. Dust Control; During the progress of the work, the Contractor will conduct his operations and maintain the area of his activities, including sweeping and sprinkling of streets as necessary, to minimize creation and dispersion of dust. If the Engineer decides it is necessary to use calcium chloride for more effective dust control, the Contractor will furnish and spread the material, as directed. Calcium Chloride will not be used for dust control within a drainage basin or in the vicinity of any source of potable water
- H. Any water that is pumped and discharged from the trench and/or excavation as part of the Contractor's water handling will be filtered by an approved method prior to its discharge into a receiving water or drainage system
- I. Under no circumstances will the Contractor discharge water to the areas designated as wetlands. When constructing in a wetlands area, the Contractor will discharge water from dewatering operations directly to the nearest drainage system, stream, or waterway after filtering by an approved method.
- J. The pumped water will be filtered through baled hay, a vegetative filter strip or a vegetated channel to trap sediment occurring as a result of the construction operations. The vegetated channel will be constructed such that the discharge flow rate will not exceed a velocity of more than 1 foot per second. Accumulated sediment will be cleared from the channel periodically.

#### **1.25 CITY OF WORCESTER ORDINANCES, LICENSES, PERMITS, AND FEES**

- A. All Contractors shall comply with City Ordinances which may affect the work of this contract and which have not been previously covered in the Contract Documents.

Requirements and fees listed are those in effect as of this writing and each Contractor shall be responsible for verifying the requirements and fee cost as currently in effect and throughout the duration of this project. This includes, but is not limited to, the following:

1. Worcester Police Department.
  - a. Police Details
    - 1) Hourly rate for ½ day or full day
  - b. Permits for Sunday and Holiday Work
    - 1) Fee Required
2. Department of Public Works, Permits Division
  - a. Street Opening Permit Bond
    - 1) \$ 5,000.00
  - b. Barricade Placement by DPW
    - 1) 1st \$90 per day
    - 2) Each additional \$ 55 per day
  - c. Drain layers License
    - 1) New \$ 140.00
    - 2) Annual Renewal \$ 60.00
  - d. Drain Permit
    - 1) \$ 95.00
  - e. Sanitary Connection (Gallorage Fee)
    - 1) To be paid for by the City
  - f. Main Inspection
    - 1) \$ 1.71 per Foot
  - g. Assessment
    - 1) To paid for by the City
  - h. Permit Manuals
    - 1) \$ 5.00
  - i. Plan Review
    - 1) \$ 60.00
  - j. Street Obstruction
    - 1) \$ 87.00 each

- k. Street Obstruction (Blanket Permit)
  - 1) \$ 1,000.00 per year
- l. Street Opening
  - 1) Pavement older than 5 years \$ 87.00
  - 2) Pavement 5 years old or less \$ 174.00
- m. Water meter, etc. Contact Water Department at 508-799-1492.
- n. Traffic & Parking. Contact Department at 508-799-1468.
- 3. Worcester Fire Department
  - a. Fire and Smoke Alarm
  - b. Automatic Sprinkler and Standpipes
  - c. Contact Worcester Fire Department at 508-799-1826.
- 4. Department of Code Enforcement
  - a. Building Permit
    - 1) Based on total contract price
      - a) To be paid for by the City
    - 2) Document Microfilm
      - a) To be paid for by the City
    - 3) Orders of Building Official under Chapter 1, 780 CMR.
    - 4) Ticket violation under Chapter 33, 780 CMR.
  - b. Trash Control
    - 1) Ticket for Violations
  - c. Environmental Control
    - 1) Air, Water, Noise Pollution - Ticket for Violations
    - 2) Conservation Commission Enforcement Officer
- B. The Contractor must determine and pay for any and all State or federal permit fees associated with the work required in this contract.

## **1.26 REJECTED MATERIALS AND DEFECTIVE WORK**

- A. Materials furnished by the Contractor and condemned by the Architect as unsuitable or not in conformity with the specifications shall forthwith be removed from the work by the Contractor, and shall not be made use of elsewhere in the work.

- B. Any errors, defects or omissions in the execution of the work or in the materials furnished by the Contractor, even though they may have been passed or overlooked or have appeared after the completion of the work, discovered at any time before the final payment is made hereunder, shall be forthwith rectified and made good by and at the expense of the Contractor and in a manner satisfactory to the Architect.
- C. The Contractor shall reimburse the Owner for any expense, losses or damages incurred in consequence of any defect, error, omission or act of the Contractor or his employees, as determined by the Architect, occurring previous to the final payment.

SECTION**

## SECTION 012500

### PRODUCT SUBSTITUTIONS

#### PART 1 - GENERAL

##### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, are hereby made part of this Section.

##### 1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for handling requests for substitutions made after award of the Contract.
- B. References Standards and Definitions: Refer to Section 01095 "Reference Standards and Definitions" for applicability of industry standards to products specified.
  - 1. Requirements for submitting the Contractor's Construction Schedule and the Submittal Schedule are included under Section 01300 "Submittals".
  - 2. Procedural requirements governing the Contractor's selection of products and product options are included under Section 01600 "Materials and Equipment".

##### 1.3 DEFINITIONS

- A. Definitions used in this Article do not change or modify the meaning of other terms used in the Contract Documents.
- B. Substitutions: Changes in products, materials, equipment, and methods of construction required by the Contract Documents proposed by the Contractor after award of the Contract are considered to be requests for substitutions. The following are not considered to be requests for substitutions:
  - 1. Specified options of products and construction methods included in the Contract Documents.
  - 2. The Contractor's determination of, and compliance with, governing regulations and orders issued by governing authorities.

##### 1.4 SUBMITTALS

- A. Substitution Request Submittal: Requests for substitution will be considered if received within two (2) days after commencement of the Work. Requests

received more than two (2) days after commencement of the Work may be considered or rejected at the discretion of the Architect.

1. Submit three (3) copies of each request for substitution for consideration. Submit requests in the form and according to procedures required for Change-Order Proposals.
2. Identify the product or the fabrication or installation method to be replaced in each request. Include related Specification Section and Drawing numbers.
3. Provide complete documentation showing compliance with the requirements for substitutions, and the following information, as appropriate:
  - a. Product Data, including Drawings and descriptions of products and fabrication and installation procedures.
  - b. Samples, where applicable or requested.
  - c. A statement indicating the substitution's effect on the Contractor's Construction Schedule compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall Contract Time.
  - d. Cost information, including a proposal of the net change, if any in the Contract Sum.
  - e. The Contractor's certification that the proposed substitution conforms to requirements in the Contract Documents in every respect and is appropriate for the applications indicated.
4. Architect's Action: Within five (5) days of receipt of a request for substitution the Architect will request additional information or documentation for evaluation necessary for the evaluation of the request. Within five (5) days of receipt of the request, or of receipt of additional information or documentation, whichever is later, the Architect will notify the Contractor of acceptance or rejection of the substitution. If a decision on use of a proposed substitute cannot be made or obtained within the time allocated, use the product specified by name. Acceptance will be in the form of a Change Order when a change in the Contract Sum or Contract Time is required; or in the form of the Architect's Supplementary Instructions when no change to the Contract Sum or Time is required.

## 1.5 WORK CONDITIONS / SEQUENCE

- A. If sub-contractors find that conditions are not appropriate for them to begin the work of their trade or if they are directed to perform their work out of sequence by the General Contractor or if the General Contractor directs sub- contractors to start and continue regardless of job conditions, the sub- contractor shall so notify the Architect in writing by certified mail immediately.

## PART 2 - PRODUCTS

### 2.1 SUBSTITUTIONS

- A. The Contractor's submittal and the Architect's acceptance of Shop Drawings, Product Data, or Samples that relate to construction activities not complying with the Contract Documents do not constitute an acceptable or valid request for substitution, nor do they constitute approval.
- B. Conditions: The Architect will receive and consider the Contractor's request for substitution when one or more of the following conditions are satisfied, as determined by the Architect. If the following conditions are not satisfied, the Architect will return the requests without action except to record non-compliance with these requirements.
1. Extensive revisions to the Contract Documents are not required.
  2. Proposed changes are in keeping with the general intent of the Contract Documents.
  3. The request is timely, fully documented, and properly submitted.
  4. The request is directly related to an "or-equal" clause or similar language in the Contract Documents.
  5. The specified product or method of construction cannot receive necessary approval by a governing authority, and the requested substitution can be approved.
  6. The specified product or method of construction cannot be provided in a manner that is compatible with other materials and where the Contractor certifies that the substitution will overcome the incompatibility.
  7. The specified product or method of construction cannot be coordinated with other materials and where the Contractor certifies that the proposed substitution can be coordinated.
  8. The specified product or method of construction cannot provide a warranty required by the Contract Documents and where the Contractor certifies that the proposed substitution provides the required warranty.

## PART 3 - EXECUTION (Not Used)

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

## **SECTION 012600 - CONTRACT MODIFICATION PROCEDURES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### **1.2 SUMMARY**

- A. This Section specifies administrative and procedural requirements for handling and processing Contract modifications.
- B. Related Sections include the following:
  - 1. Division 01 Section "Allowances" for procedural requirements for handling and processing allowances.
  - 2. Division 01 Section "Unit Prices" for administrative requirements for using unit prices.
  - 3. Division 01 Section "Product Requirements" for administrative procedures for handling requests for substitutions made after Contract award.

#### **1.3 MINOR CHANGES IN THE WORK**

- A. Architect will issue Supplemental Instructions (SI) authorizing Minor Changes in the Work, not involving adjustment to the Contract Sum or the Contract Time. See form of Supplemental Instructions at the end of this section.

#### **1.4 PROPOSAL REQUESTS**

- A. Owner-Initiated Request for Proposal (RFP): Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications. See form of Request for Proposal at the end of this section
  - 1. Proposal Requests issued by Architect are for information only. Do not consider them instructions either to stop work in progress or to execute the proposed change.
  - 2. Within 20 days after receipt of Proposal Request, submit a Proposed Change Order (PCO) showing the proposed cost adjustments to the Contract Sum and the Contract Time necessary to execute the change. See form Proposed Change Order at the end of this section.

- a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
  - b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
  - c. Include costs of labor and supervision directly attributable to the change.
  - d. Include an updated Contractor's Construction Schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
- B. Contractor-Initiated Proposals: If latent or unforeseen conditions require modifications to the Contract, Contractor may propose changes by submitting a Proposed Change Order (PCO) to Architect.
  1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
  2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
  3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
  4. Include costs of labor and supervision directly attributable to the change.
  5. Include an updated Contractor's Construction Schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
  6. Comply with requirements in Division 01 Section "Product Requirements" if the proposed change requires substitution of one product or system for product or system specified.

## **1.5 CHANGE ORDER PROCEDURES**

- A. On Owner's approval of a Proposed Change Order (PCO), Architect will issue a Change Order (CO) for signatures of Owner and Contractor. See form of Change Order (CO) at the end of this section

## **1.6 CONSTRUCTION CHANGE DIRECTIVE**

- A. Construction Change Directive (CCD): Architect may issue a Construction Change Directive (CCD) on owner's form of Construction Change Directive (CCD). Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.

1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.
- B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
  1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

## **PART 2 - PRODUCTS (Not Used)**

**EXECUTION – Examples of forms follow this page:** ACTUAL FORMS WILL REFLECT SOUTH HIGH COMMUNITY SCHOOL

1. Supplemental Instruction (SI)

Section 01 26 13  
REQUESTS FOR INTERPRETATION

**PART 1 – GENERAL**

1.1 SUMMARY

- A. Administrative requirements for Requests For Information (RFI's).

1.2 DEFINITIONS

- A. Requests For Information (RFI):
1. A document submitted by the Construction Manager to the Architect requesting clarification of a portion of the Contract Documents, hereinafter referred to as RFI.
  2. A properly prepared RFI shall include a detailed written statement that indicates the specific Drawings or Specification in need of clarification and the nature of the clarification requested.
    - a. Drawings shall be identified by drawing number and location on the drawing sheet.
    - b. Specifications shall be identified by Section number, page and paragraph.
    - c. The Construction Manager shall provide suggestions or alternate solutions to the RFI if such suggestions are known or should be known.
- B. Improper RFI's:
1. RFI's that are not properly prepared, as required above.

Improper RFI's will be processed by the Architect at the Architect's standard hourly rate and Architect will charge the Construction Manager, and such costs will be deducted from monies due the Construction Manager. The Construction Manager will be notified by the Architect through the Construction Manager of the "back charge" amounts.
- C. Frivolous RFI's:
1. RFI's that request information that is clearly shown on the Contract Documents.
  2. Frivolous RFI's will be returned unanswered.

1.3 CONSTRUCTION MANAGER'S REQUESTS FOR INFORMATION

- A. When the Construction Manager is unable to determine from the Contract Documents, the material, process or system to be installed, the Construction Manager shall submit an RFI to the Architect requesting a clarification of the indeterminate item.
1. When possible, such clarification shall be requested at the next appropriate project meeting, with the response entered into the meeting minutes. When clarification at the meeting is not possible, either because of the urgency of the need, or the complexity of the item the Construction Manager shall prepare and submit an RFI to the Architect.

- B. Individual Contractors and Each Trade Contractor shall endeavor to keep the number of RFI's to a minimum. In the event that the process becomes unwieldy, in the opinion of the Architect, because of the number and frequency of RFI's submitted, the Architect may require the Construction Manager to abandon the process and submit future requests as submittals, substitutions, or requests for change.
- C. RFI's shall be submitted on a form acceptable to the Architect. Forms shall be completely filled in, and if prepared by hand, shall be fully legible after photocopying or electronic transmission in PDF format. Each page of attachments to RFI's shall bear the RFI number in the lower right corner.
- D. RFI's shall be originated by the Construction Manager, individual contractors, or Trade Contractors as appropriate. Construction Manager shall endeavor to address and resolve Trade Contractor's RFI's to the extent possible for issues which are obviously covered by the Contract Documents, before forwarding to the Architect for processing.
  - 1. RFI's from subcontractors, Trade Contractors or material suppliers shall be submitted through, reviewed by, and signed by the Construction Manager prior to submittal to the Architect.
  - 2. RFI's shall be processed and sent to the Architect from the Construction Manager only. RFI's received by the Architect or the Architect's consultants from other parties shall not be accepted and will be returned unanswered.
- E. Each Trade Contractor shall carefully study the Contract Documents to assure that the requested information is not available therein. RFI's which request information available in the Contract Documents will be deemed either "improper" or "frivolous" as noted above.
- F. In cases where RFI's are issued to request clarification of coordination issues, for example pipe and duct routing, clearances, specific locations of work shown diagrammatically, and similar items, the Construction Manager shall fully lay out a suggested solution using drawings or sketches drawn to scale, and submit same with the RFI. RFI's, which fail to include a suggested solution, will be returned unanswered with a requirement that the Construction Manager submit a complete request.
- G. RFI's used for the following purposes will be returned without review:
  - 1. To request approval of submittals.
  - 2. To request approval of substitutions.
  - 3. To request coordination information already indicated in the Contract Documents.
  - 4. To request changes which entail adjustments in the Contract Time or the Contract Sum (additional cost or credit).
  - 5. To request different methods of performing work than those drawn and specified.
  - 6. To request interpretation of Architect/Engineer's actions on submittals.
  - 7. Incomplete RFI's or RFI's with numerous errors.

- H. In the event the Construction Manager believes that a clarification by the Architect results in additional cost or time, Construction Manager shall not proceed with the Work indicated by the RFI without a written authorization from the Architect. RFI's shall not automatically justify a cost increase in the Work or a change in the Schedule.
  - 1. Answered RFI's shall not be construed as approval to perform extra work.
  - 2. Unanswered RFI's will be returned with a stamp or notation: Not Reviewed.
- I. Construction Manager will prepare and maintain a log of RFI's and provide updated copies at the weekly Construction Progress Meetings showing outstanding RFI's.
- J. RFI Response: The Architect will endeavor to respond in a timely fashion to RFI's, however, the following minimum time periods are required. RFI's which are received by the Architect after 1PM local time shall be considered received on the following working day.
  - 1. RFI's which require only Architect's Response: Construction Manager shall allow up to Three (3) full work days review and response time,
  - 2. RFI's which require Architect's and an Engineering or Consultant Response: Construction Manager shall allow up to Four (4) full work days review and response time.

#### 1.4 ARCHITECT'S RESPONSE TO RFI'S

- A. Architect will respond to RFI's on one of the following forms:
  - 1. Properly prepared RFI's:
    - a. Response on the RFI form.
    - b. Architect's Supplemental Instruction.
    - c. Request for Proposal.

## SECTION 012900

### APPLICATION FOR PAYMENT

#### PART 1 - GENERAL

##### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, are hereby made a part of this Section.
- B. Related Sections: Sections which contain requirements that relate to this Section include, but are not limited to the following:
  - 1. Section 00800
  - 2. Section 00900
  - 3. Section 00950
  - 4. Section 01230
  - 5. Section 01270
  - 6. Section 01300
  - 7. Section 01700

##### 1.2 SUMMARY

- A. This Section specifies administrative and procedural requirements governing the Progress Schedule, Schedule of Values, and Contractor's Applications for Payment.
  - 1. Coordinate the Schedule of Values and Applications for Payment with the Contractor's Project Progress Schedule, List of Subcontracts, and Submittal Schedule.
- B. The Contractor's Submittal Schedule and Project Progress Schedule are included in Specification Sections 01300 and 01325 respectively.

##### 1.3 PROGRESS SCHEDULE

- A. Prepare the Project Progress Schedule in accordance with Specification Section 00200- General Conditions, Article 8, for submittal to the Owner's Project Manager and approval by the Architect.
  - 1. The Progress Schedule shall conform to the requirements in Specification Section 01325. Reference to the terms Contractor's Progress Schedule,

Progress Schedule, Construction Schedule, or Project Schedule, within the Contract Documents shall mean Project Progress Schedule.

#### 1.4 SCHEDULE OF VALUES

- A. Coordinate preparation of the Schedule of Values with preparation of the Progress Schedule.
  - 1. Correlate line items in the Schedule of Values with other required administrative schedules and forms, including:
    - a. Contractor's Progress Schedule.
    - b. Application for Payment forms.
    - c. List of products.
    - d. Schedule of allowances, if any.
    - e. Schedule of alternates, if any.
    - f. Schedule of unit prices, if any.
    - g. List of products.
    - h. List of principal suppliers and fabricators.
    - i. Schedule of submittals.
  - 2. Submit the preliminary Schedule of Values to the Architect and the Construction Manager at the earliest possible date, but no later than ten (10) days before the date scheduled for submittal of the initial Application for Payment. Submit the final Schedule of Values seven (7) days following the acceptance of the CPM Schedule.
- B. Format and Content: Use the Project Manual Table of Contents and the CPM Schedule of Activities to establish the format for the Schedule of Values. Provide at least one (1) line item for each Specification Section including all major divisions of work within each Section. The Schedule of Values must be coordinated with the Project Progress Schedule. Coordinate with the Owner's Project Manager and the Architect for the development of, and the required revisions to the preliminary Schedule of Values prior to submitting for approval by the Architect, the final Schedule of Values. Show all major categories of work including, but not limited to major equipment and project closeout submittals.
  - 1. Include the following Project identification on the Schedule of Values:
    - a. Project name and location.
    - b. Name of the Architect.
    - c. Project number.
    - d. Contractor's name and address.
    - e. Date of submittal.

2. Arrange the Schedule of Values in a tabular form with separate columns to indicate the following for each item listed:
  - a. Generic name.
  - b. Related Specification Section.
  - c. Description of Work.
  - d. Name of subcontractor.
  - e. Name of manufacturer or fabricator.
  - f. Name of supplier.
  - g. Change Orders (numbers) that have affected value.
  - h. Percentage of Contract Sum to the nearest percent, adjusted to total 100 percent.
3. Provide a breakdown of the Contract Sum in sufficient detail to facilitate continued evaluation of Applications for Payment and progress reports. Breakdown shall be done by sequence. Coordinate with the Project Manual Table of Contents. Break principal subcontract amounts down into several line items, including but not limited to major equipment and project closeout submittals.
4. Do not round amounts off to the nearest whole dollar; carry all amounts out to the two (2) decimal places and the totals shall equal the Contract Sum.
5. For each part of the Work where an Application for Payment may include materials or equipment, purchased or fabricated and stored, but not yet installed, provide separate line items on the Schedule of Values for initial cost of the materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
6. Margins of Cost: Show line items for indirect costs, and margins on actual costs, only to the extent that such items will be listed individually in Applications for Payment. Each item in the Schedule of Values and Applications for Payment shall be complete, including its total cost and proportionate share of general overhead and profit margin for each item.
  - a. Temporary facilities, shop drawing, submittals, project closeout submittals, and other major cost items that are not direct cost of actual work-in-place shall be shown as separate line items in the Schedule of Values or distributed as general overhead expense, at the Contractor's option.
  - b. The Project Progress Schedule is an integral part of the Work. As such, it shall be shown on the Schedule of Values with a corresponding total cost.
7. Schedule Updating: Update and resubmit the Schedule of Values prior to the next Application for Payment when Change Orders or Construction Change Directives result in a change to the Contract Sum.
8. Contractor shall submit the draft Application for Payment to the Architect, through the Owner's Project Manager, an electronic version of the Application for Payment in an MS Excel spreadsheet format.

## 1.5 APPLICATION FOR PAYMENT

- A. Draft Application Preparation: Submit three (3) draft copies of the (current) Application for Payment at the weekly project meeting for Architect's review seven (7) days in advance of the "Payment Application Time" as indicated in the Agreement. Contractor shall submit the draft Application for Payment, in an electronic MS Excel spreadsheet format. The Architect will highlight areas requiring revision or clarification and return to the file to the Owner's Project Manager for transmittance to the Contractor.
1. Draft Application for Payment transmittal shall include the a fully executed Draft Cover Sheet or Periodic Submittal Certification Statement on Contractor letterhead (bound at the end of this section hereafter) certifying that the following Periodic Submittals are current for the appropriate period:
    - a. Originals of All Waivers of Mechanics Lien & Corresponding Logs Covering Status of All Waivers.
    - b. Certified payrolls.
    - c. Contract Compliance Submittals
    - d. Insurance and transfer title certificates for any material stored off site.
    - e. Updated as-built drawings of record reflecting Work for the current Application period.
- B. Each Application for Payment shall be consistent with previous applications and payments as certified by the Architect and paid for by the Owner.
1. The initial Application for Payment, the Application for Payment at time of Substantial Completion, and the final Application for Payment involve additional requirements.
- C. Payment Application Times: Each progress payment date is as indicated in the Agreement. The period of construction Work covered by each Application for Payment is the period indicated in the Agreement.
- D. Payment Application Cover Sheet Form: Complete the enclosed Application and Certification for Payment Cover Sheet on Contractor letterhead (bound at the end of this Section hereafter) and transmit with each Payment Application Form submittal.
- E. Payment Application Forms: Use AIA Document G 702 and Continuation Sheets G 703 as the form for Application for Payment. No exceptions will be made.
- F. Application Preparation: Complete every entry on the form, including notarization and execution by a person authorized to sign legal documents on

behalf of the Contractor. The Architect will return incomplete applications without action.

1. Entries shall match data on the Schedule of Values and Contractor's Construction Schedule. Use updated schedules if revisions have been made.
  2. Include only amounts of approved and fully executed Change Orders. Obtain approval from the Architect prior to inclusion into the Application.
  3. Each Application for Payment must be accompanied by an updated Project Progress Schedule. The format to which is subject to the Owner's Project Manager's and Architect's approval. The Architect will return the Application for Payment with "no action taken" if it is not submitted with an updated Project Progress Schedule.
- G. Payment for materials and/or equipment stored off site shall be considered upon the Owner's approved submission by the Contractor bill(s) of sale or such other documentation or procedures satisfactory to the Owner to establish the Owner's clear and legal title to such materials and/or equipment or otherwise provided to protect the Owner's interest. This shall include applicable insurance and transportation to the project site for those materials and/or equipment suitably stored off site under consideration for payment.
1. Any Contractor making an application for payment pursuant to Section 00200 – General Conditions, paragraph 9.3.2, shall provide the following written documentation to the Architect through the Construction Manager as delineated below and as otherwise maybe reasonably requested by the Owner:
    - a. Bill of Material, Purchase Order or Invoice Number.
    - b. Product Description Listing.
    - c. Serial Numbers (If Applicable)
    - d. Materials and/or Equipment (wares) shall be segregated from all other stock or equipment and clearly labeled and/or marked as City of Worcester Property.
    - e. Wares shall be available for inspection at all times and in any event within twenty-four (24) hours after receiving prior notice from the Owner/Architect.
    - f. Provide written directions from the project site to the location of the stored wares.
    - g. Name of contact person at the storage site and applicable telephone numbers.
    - h. Method and mode of transportation from off site storage location to the job site.
- H. Retainage: In accordance with the Supplemental General Conditions, the Awarding Authority (Owner) shall deduct a retainage not exceeding five (5)

percent of the approved amount of the periodic payment. The aforesaid five (5) percent retainage deduction by the Owner is the only retainage authorized hereunder. The contractor shall not deduct any amounts from payments received on behalf of subcontractors, except those deductions specifically authorized by M.G.L. Chapter 30, Section 39 (1) (a).

1. Upon the initial and any subsequent Application for Payment; requesting or reflecting a "Release of Retainage" provide a Summary cover sheet indicating the derivation arithmetically, by each line item, of the total released to date and the of the current total retainage sum.
- I. Transmittal: Upon receipt of the required periodic submittals enumerated above and upon approval of the "Draft Application", submit six (6) fully executed and notarized original copies with Cover Sheet of the current Application for Payment to the Architect by means ensuring receipt within twenty-four (24) hours. One (1) copy shall be complete, including waivers of lien and similar attachments.
  1. Transmit each copy with a transmittal form listing attachments, and recording appropriate information related to the application in a manner acceptable to the Architect.
  2. With each requisition, after the first requisition, submit one (1) copy of updated as-built drawings for all underground and concealed work, showing locations, depths, or elevations.
- J. Waivers of Mechanics Lien: With each Application for Payment, submit waivers of mechanics lien from every entity who may lawfully be entitled to file a mechanics lien arising out of the Contract, and related to the Work covered by the payment.
  1. Submit partial waivers on each item for the amount requested, prior to deduction for retainage, on each item.
  2. When an application shows completion of an item, submit final or full waivers.
  3. The Owner reserves the right to designate which entities involved in the Work must submit waivers.
  4. Waiver Delays: Submit each Application for Payment with the Contractor's waiver of mechanics lien for the period of construction covered by the previously paid application.
    - a. Submit final Application for Payment with, or preceded by, final waivers from every entity involved with performance of Work covered by the application that could lawfully be entitled to a lien.
  5. Waiver Forms: Submit waivers of lien on forms, and executed in a manner, acceptable to Owner.

K. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of the first Application for Payment include the following:

1. List of subcontractors; at all tiers.
2. List of principal suppliers and fabricators.
3. Approved Schedule of Values.
4. Contractor's Project Progress Schedule, see Section 01325.
5. Schedule of principal products.
6. Submittal Schedule (preliminary, if not final).
7. List of Contractor's staff assignments.
8. List of Contractor's principal consultants.
9. Copies of building permits.
10. Copies of authorizations, permits and licenses from governing authorities for performance of the Work.
11. Initial progress report.
12. Report of pre-construction meeting.
13. Schedule of Pre-installation meetings.
14. Certificates of insurance and insurance policies.
15. Performance and payment bonds.
16. Data needed to acquire Owner's insurance.
17. Initial settlement survey and damage report, if required.
18. List of Contractor's personnel names and titles assigned on the project and emergency telephone numbers.

L. Application for Payment at Substantial Completion: Following issuance of the Certificate of Substantial Completion, submit an Application for Payment.

1. This application shall reflect Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.
2. Administrative actions and Submittals that shall precede or coincide with this application include:
  - a. Occupancy permits and similar approvals.
  - b. Warranties (guarantees) and maintenance agreements.
  - c. Test/adjust/balance records.
  - d. Maintenance instructions.
  - e. Meter readings.
  - f. Start-up performance reports.
  - g. Changeover information related to Owner's occupancy, use, operation and maintenance.
  - h. Final cleaning.
  - i. Application for reduction of retainage, and consent of surety
  - j. Advice on shifting insurance coverage.

- k. Final progress photographs.
  - l. List of incomplete work, recognized as exceptions to Architect's Certificate of Substantial Completion.
- M. Final Payment Application: Administrative actions and submittals that must precede or coincide with submittal of the final payment Application for Payment include the following:
- 1. Completion of Project closeout requirements.
  - 2. Completion of items specified for completion after Substantial Completion
  - 3. Assurance that unsettled claims will be settled.
  - 4. Assurance that incomplete Work and Work not accepted will be completed without undue delay.
  - 5. Transmittal of required Project construction records to the Owner.
  - 6. Certified property survey.
  - 7. Proof that taxes, fees and similar obligations have been paid.
  - 8. Removal of temporary facilities and services.
  - 9. Removal of surplus materials, rubbish and similar elements.
  - 10. Change of door locks to Owner's access.
  - 11. Order of Conditions Certificate of Compliance, if applicable.
- N. Application Review: The Architect, Construction Manager, and their respective Consultants are permitted fourteen (14) days to review the application for payment. Within such time the Application will either be returned to the Contractor for correction or certified by the Architect and forwarded to the Owner for payment.

DRAFT APPLICATION FOR PAYMENT PERIODIC  
SUBMITTAL CERTIFICATION STATEMENT

Project Name: Draft Application Date: \_\_\_\_\_

Draft Application No. \_\_\_\_\_ (Requisition No.)

For Period:  
Starting \_\_\_\_\_  
Through Period  
Ending \_\_\_\_\_

\_\_\_\_\_, (Name \_\_\_\_\_ of \_\_\_\_\_ Contractor)  
, certifies that the "Draft Application for Payment" as herein submitted with all of the following Periodic Submittals fully and completely executed and current for the appropriate time period(s) as required.

FURNISH THE FOLLOWING PERIODIC SUBMITTALS AND PROVIDE ALL REQUIRED INFORMATION FOR THE APPROPRIATE TIME PERIOD(S) AS REQUESTED. PLEASE SUBMIT ON SEPARATE SHEETS:

- I. Original Waivers of Mechanic Lien: List every entity who may be lawfully entitled to file a lien resulting out of this Contract, including but not limited to; contractors/subcontractors, at all tiers, vendors, and suppliers. Submit current originals of all Waivers covering all WORK completed through the period ending thirty (30) days prior to this periods "Application" date and as further required in I above.
- II. Certified Payrolls: All payroll reports have been submitted as required by the Contract Compliance Office.
- III. Contract Compliance Reports: All contract compliance reports have been submitted as required by the Contract Compliance Office.
- IV. Insurance & Title Transfer Certificates for material stored off site, if applicable.
- V. Updated As-Built Drawings: Record drawings have been submitted reflecting the work completed up to the time of Application.

This Draft Application for Payment Certification Statement and corresponding Periodic Submittals (attached) shall be reviewed by the Awarding Authority for completeness. Any deficiency, discrepancies or missing items shall cause this Draft Application for Payment to be returned to the Contractor with no action taken.

## **SECTION 013000**

### **SUBMITTALS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, are hereby made part of this Section.
  - 1. The submittals enumerated below shall require review and/or approval by the Architect.
- B. Refer to Specification Section 01315 – Project Management Communications for additional Procore information.

##### **1.2 SUMMARY**

- A. This Section includes administrative and procedural requirements for submittals required for performance of the Work, including:
  - 1. Contractor's construction progress schedule.
  - 2. Major delivery schedule.
  - 3. Existing utility tie-in's schedule.
  - 4. Submittal schedule.
  - 5. Pre-Installation Conference Schedule (By Specification Section).
  - 6. Daily construction reports.
  - 7. Shop drawings.
  - 8. Product data.
  - 9. Samples.
  - 10. Quality assurance submittals.
  - 11. Submittal of three (3) sets of stamped plans and specifications, complete with all addendums posted, to the City of Worcester Building Department to obtain building permit.
- B. Administrative Submittals: Refer to other Division 1 Sections and other Contract Documents for requirements for administrative submittals. Such submittals include, but are not limited to, the following:
  - 1. Product Substitution.
  - 2. Periodic Submittals.
  - 3. Permits.
  - 4. Applications for Payment.
  - 5. Performance and payment bonds.

6. Insurance Certificates.
  7. List of Project Contractors, Subcontractors, Vendors, etc.
  8. List of Personnel and Emergency Telephone Numbers.
  9. City Ordinance Program Forms.
  10. LEEDv4 submittals.
- C. The Schedule of Values submittal is included in Section 01027 "Applications for Payment".
- D. "Project Closeout", Section 01700, specifies requirements for submittal of Project Record Documents and warranties at project closeout.

### 1.3 ELECTRONIC SUBMITTAL PROCEDURES

- A. All submittals shall be submitted following the appropriate guideline as outlined below:
1. **Fully Electronic Submittals** – Any submittal that is 8-1/2" x 11" in format shall be submitted in an electronic format as an attachment to the submittal form within the Procore Site. Refer to Specification Section 01315 – Project Management Communications for additional information regarding the Procore System.
    - a. For the electronic submission referred to above, only one (1) copy needs to be sent electronically to the Architect. Do not send "books" of multiple product information, i.e. "Plumbing Fixtures" as one submittal. Make each fixture a separate submittal and identify each submittal separately.
    - b. The electronic files shall be submitted in one of the following formats:
      - (i) A scan at 150 dpi of an original paper document as an Adobe Acrobat file (also known as a .pdf), a JPEG image file (also known as a .jpg), or a TIFF image file (also known as a .tif)
      - (ii) An original file created by a contractor, subcontractor, or supplier as a Microsoft Word file (also known as a .doc), a Microsoft Excel file (also known as a .xls), an Adobe Acrobat file (also known as a .pdf), a JPEG image file (also known as a .jpg), or a TIFF image file (also known as a .tif).
      - (iii) A download file from the internet as a Microsoft Word file (also known as a .doc), a Microsoft Excel file (also known as a .xls), an Adobe Acrobat file (also known as a .pdf), a JPEG image file (also known as a .jpg), or a TIFF image file (also known as a .tif).
      - (iv) Documents other than scans of original paper documents, original files, and downloaded files from the internet may be submitted electronically as long as they are submitted as an

AutoCAD drawing file (also known as a .dwg), a DXF drawing file (also known as a .dxf), a Microsoft Word file (also known as a .doc), a Microsoft Excel file (also known as a .xls), an Adobe Acrobat file (also known as a .pdf), a JPEG image file (also known as a .jpg), or a TIFF image file (also known as a .tif).

- (v) Any and all notes, hand corrections made to any submittal are to be made in black marker in a style darker (broader or bolder) than the plotted lines for easy recognition.
  - c. For these fully electronic submittals, each applicable party to a submittal shall be responsible for making their own copies for the purposes of review and record keeping.
  - d. All fully electronic submittals will be reviewed and any mark-ups to those submittals will be returned as an electronic attachment, when they are returned to the Contractor.
  - e. Approved submittals will be promptly posted in the Procore Documents section under Approved Submittals.
2. **Original Document Submittals Requiring Approvals**– Any submittal that has a format larger than 8-1/2” x 11”, such as shop drawings or physical samples, that require original submissions shall be entered into the Procore system and have the submittal form printed and attached as the transmittal cover sheet to the original submittal documents that will be mailed, shipped, or hand delivered to the Architect.
- a. For the electronic submittal cover sheet and original document submission referred to above. The contractor shall submit to the Architect. The Architect will mark-up, correct, and grade the submittal and return to the Owner’s Project Manager, and return to the Contractor. The Contractor shall make and pay for additional copies of the marked-up submission as needed.

(\*) Number as required for sub-contractors.

(\*) Number as required for Contractor’s records.

(4) Copies for the Owner’s Project Manager and Owner .  
Construction

Manager shall post the final submission on Team Builder as follows.

***For submittals requiring consultant’s review increase the contractor’s submittal number to six (6) copies.***

- b. One (1) copy of all approval submittals in this category will be posted, in an electronic form, to the Procore Site by the Owner's Project Manager as an AutoCAD drawing file (also known as a .dwg), a DXF drawing file (also known as a .dxf), a Microsoft Word file (also known as a .doc), a Microsoft Excel file (also known as a .xls), an Adobe Acrobat file (also known as a .pdf), a JPEG image file (also known as a .jpg), or a TIFF image file (also known as a .tif).
  - c. For original documents not requiring approvals the contractor shall transmit as indicated above and submit (6) six copies to the Owner's Project Manager for their distribution to the Owner, Architect, and their Consultants, and will post on Procore as indicated above.
- B. Processing: All Contractors are directed to the timeliness and critical importance of expediting the submittal process. Any lead times, which may impact sequencing, should be prioritized to meet the project schedule. Architect and Owner's Project Manager must be notified if any delays arise that will impact lead times.
- C. Submittal Preparation: For all submittals the Construction Manager shall fill out a submittal form on the TeamBuilder Site. For all **Fully Electronic Submittals**, the General Contractor shall just attach all applicable electronic files to that submittal form on the site. For all **Original Document Submittals**, the General Contractor shall print a copy of the submittal form and use it as a transmittal with the submission. Also, place a permanent label or title block on each **Original Document Submittal** for identification. The label shall indicate the name of the entity that prepared each submittal on the label or title block.
  - 1. Provide a space approximately 4 by 5 inches on the label or beside the title block on Shop Drawings to record the Contractor's review and approval markings and the action taken.
  - 2. Include the following information on the label for processing and recording action taken.
    - a. Project name.
    - b. Date.
    - c. Name and address of the Architect.
    - d. Name and address of the Contractor.
    - e. Name and address of the subcontractor.
    - f. Name and address of the supplier.
    - g. Name of the manufacturer.
    - h. Number and title of appropriate Specification Section.

- i. Drawing number and detail references, as appropriate.
- D. Submittal Transmittal: For each **Original Document Submittal**, the submittal form filled out and printed from the TeamBuilder site shall function as the transmittal. Package each of these submittals appropriately for transmittal and handling. Transmit each submittal from the Contractor to the Owner's Project Manager. The Owner's Project Manager will not accept submittals received from sources other than the General Contractor, nor will the Architect accept submittals directly for the General Contractor.
- E. On the submittal form in TeamBuilder, record relevant information, requests for data, and record deviations from Contract Document requirements, including variations and limitations. The General Contractor shall include on the TeamBuilder submittal form his certification that information complies with Contract Document requirements by providing his grade of the submittal.

#### 1.4 SUBMITTAL COORDINATION

- A. Coordination of Submittals: Coordinate preparation and processing of submittals with related construction activities. Transmit submittals sufficiently in advance of performance of Work to avoid delays. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals and related pertinent activities that require sequential activity.
  1. Architect may reject, or withhold action on submittals requiring coordination with other submittals until related submittals are received.
- B. Processing of Submittals: Allow sufficient review time to ensure installation will not be delayed because of time required to process submittals. Minimum processing times after the submission times established in the submittal schedule are as follows:
  1. Review by Architect's Office Only: Allow ten business days for review and processing, per submittal per building. ***Allow 20 business days for hollow metal doors, hardware, millwork and other project wide detailed items.***
  2. Review by Architect and Consultant: Allow ten business days for review and processing of submittals by Architect, and an additional ten business days for review by each consultant, per submittal per building. Allow 20 business days for temperature control systems, package HVAC rooftop units, and other project wide detailed items.
  3. Reprocessing of Submittals: For submittals not approved initially, allow ten business days for review and reprocessing of submittals by

Architect, and an additional ten business days for review by each consultant, per submittal per building.

4. No extension of Contract Time will be authorized due to failure to transmit submittals sufficiently in advance of scheduled performance of Work.
  5. Submittals must be sequenced. Multiple submittals must be prioritized by General Contractor.
  6. Allow minimum fifteen business days to process.
  7. Interior and exterior color selections will not be made until all colors for products requiring selections have been received by Architect. Allow thirty business days for final selections once all color submittals have been received.
- C. Contractor's Preparation of Submittals: Submit each submittal with the Architect's transmittal form, a copy of which is attached at the end of this Section. Place permanent label or title block on each submittal for identification. Indicate Project Name, Architect's Project Number, Specification Section number and title, date of submittal, name and address of Architect, name and Address of Contractor, name and address of subcontractor and/or supplier, name of manufacturer, Drawing number and detail reference.
1. Contractor's Review and Action Stamp: Provide suitable space on label or title block for Contractor's review and action stamp. Stamp and sign each submittal to show Contractor's review and approval prior to transmittal to Architect. Submittals not signed and stamped or the appropriate electronic version of the approval by Contractor will be returned without action.
  2. Only submittals received from the General Contractor will be considered for review by the Architect. All submittals prepared by subcontractors or suppliers shall be processed through the Contractor. The Contractor shall review each submittal carefully for accuracy and conformance with the requirements of the Contract Documents, and particularly for field measurements and proper fit with adjoining work, and shall affix a stamp or electronic cover sheet containing the following wording, or a similar statement approved in advance by the Architect:

APPROVED FOR CONFORMANCE WITH THE  
CONTRACT DOCUMENTS.

All Dimensions and Quantities Have Been Reviewed and Are Accepted  
by *<Here insert name of General Contractor>*. All Dimensions and

Field Conditions Have Been or Will Be Verified PRIOR to Fabrication  
of the Items Described Herein.”

3. Submittals shall be signed by a responsible representative of the Contractor. Items not bearing an acceptable certification will be returned unchecked. Submittals improperly prepared or inadequately reviewed by the Contractor (“rubber stamped” submittals) will be returned unchecked. Claims for delay due to the return of uncertified, improperly prepared, or inadequately reviewed submittals will be rejected.
  4. Architect's Review and Action Stamp: Provide minimum 4 in. x 4 in. space on label or title block for Architect's review and action stamp. Deliver submittals to Architect at address listed on cover of Project Manual.
  5. Modify and customize submittals as required to show interface with adjacent work and attachment to building.
- D. Transmittal of Submittals: Transmit each item with Architect's transmittal form, a copy of which is attached at the end of this Section. Identify Project, Contractor, subcontractor, major supplier; identify pertinent Drawing sheet and detail number, and Specification section number, as appropriate, on transmittal form.
1. Source: Submittals received from sources other than Contractor will be returned without action.
  2. Deviations from Contract Documents: When products, materials, or systems submitted deviate from Contract Documents, record deviations clearly on transmittal form, or separate attached sheet.
- E. Comply with progress schedule for submittals related to Work progress.
- F. After Architect reviews submittal, revise and resubmit as required. Identify changes made since previous submittal. Changes not marked will be treated as having not been made, even if change is consistent with Contract Documents.
- G. Distribute copies of reviewed submittals to concerned persons. Instruct recipients to promptly report inability to comply with provisions.
- H. Incorporate all shop drawing and submittal data including but not limited to sizes, mounting requirements, clearances, power requirements, and all other requirements into the coordination drawings specified under section 01040 PROJECT COORDINATION

## **1.5 CONTRACTOR'S CONSTRUCTION SCHEDULE**

- A. Refer to Section 012900, Application for Payment.

## **1.6 SUBMITTAL SCHEDULE**

- A. Within fifteen calendar days following the award of the Contract, the Contractor shall submit a detailed Schedule of Submittals, identifying the date by which the submittals required under each Section of the Specifications, including Administrative Submittals required in this Section or elsewhere, will be delivered to the Architect. The schedule shall relate submittals to the orderly progress of the work, indicating critical dates for approval of materials. Submittal schedule to be approved by Architect.
- B. In preparing the schedule, the Contractor shall allow reasonable time for normal checking and processing of each submittal or resubmittal.
- C. Content of Submittal Schedule: Prepare schedule in order by Specification Section. Provide the following information for each submittal:
  - 1. Scheduled date of initial submittal.
  - 2. Specification Section number and paragraph.
  - 3. Submittal type.
  - 4. Name of subcontractor or supplier.
  - 5. Identify submittals requiring color selection.
- D. Upon approval of this schedule by the Architect, The Contractor shall ensure that all submittals are properly prepared and delivered to the Architect by the scheduled dates. Failure to adhere to the Schedule of Submittals may be considered by the Architect in reviewing the progress of the work for purposes of approving payments or evaluating claims for delays or additional cost.
- E. Contractor shall use a computerized system for tracking the submittal process. Software systems similar to Expedition or Prolog will be acceptable. The system shall uniquely number and track each submittal. At a minimum, the following reports shall be published on a bi-weekly basis: complete listing of required submittals, complete listing of submittals to date, complete listing of approved submittals, complete listing of rejected submittals, complete listing of submittals returned for correction, both with and without re-submittal required, and listing of outstanding submittals. Reports shall be capable of being sorted by approval status, by subcontractor/supplier, by submission date and by days late, days under review, etc.

- F. Update the submittal schedule periodically as the work progresses. Submit an updated copy of the Submittal Schedule as part of each application for payment.
- G. Distribution: Print and distribute Submittal Schedule to Architect, Owner, subcontractors, and other parties affected. Post copies in field office.
- H. Revisions: Update and reissue Submittal Schedule monthly in conjunction with Application for Payment.

## **1.7 SHOP DRAWINGS**

- A. Provide accurately prepared, large scale and detailed shop drawings prepared specifically for this Project on format as specified in section 1.3 above. Show adjacent conditions and related work. Show accurate field dimensions where appropriate. Identify materials and products shown. Note special coordination required. Standard information prepared without specific reference to Project is not considered shop drawings.
- B. Shop drawings include fabrication and installation drawings, setting diagrams, schedules, patterns, templates, and similar drawings.
- C. Show every component of fabricated item, notes regarding manufacturing process, coatings and finishes, identifying numbers conforming to Contract Documents (i.e. stair numbers, door numbers, etc.), dimensions, and appropriate trade names. Show anchorage and fastening details, including type, size and spacing. Show material gage and thickness. Indicate welding details and joint types.
- D. Include references to all product data as required.
- E. Shop Drawing Sheet Size: Except for templates, patterns, and other full-size drawings, submit shop drawings on sheets at least 8-1/2 in. x 11 in., but no larger than 32 in. x 48 in.
- F. Submittal Quantities: refer to Section 1.3 above
- G. Refer to each individual division 2 through 16 for specific requirements in addition to those outlined herein.

## **1.8 PRODUCT DATA**

- A. Collect Product Data into a single submittal for each element of construction or system. Product Data includes printed information, such as manufacturer's installation instructions, catalog cuts, standard color charts,

roughing-in diagrams and templates, standard wiring diagrams, and performance curves.

1. Where Product Data must be specially prepared because standard printed data is not suitable for use, submit as "Shop Drawings".
  2. Mark each copy to show applicable choices and options. Where printed Product Data includes information on several products that are not required, mark copies to indicate the applicable information. Include the following information:
    - a. Manufacturer's printed recommendations.
    - b. Compliance with trade association standards.
    - c. Compliance with recognized testing agency standards.
    - d. Application of testing agency labels and seals.
    - e. Notation of dimensions verified by field measurement.
    - f. Notation of coordination requirements.
- A. Do not submit Product Data until compliance with requirements of the Contract Documents has been confirmed.
- B. Unless non-compliance with Contract Document provisions is observed, the submittal may serve as the final submittal.
- C. Distribution: Furnish copies of final submittal to installers, subcontractors, suppliers, manufacturers, fabricators, and others required for performance of construction activities. Show distribution on transmittal forms.
1. Do not proceed with installation until a copy of Product Data is in the Installer's possession.
  2. Do not permit use of unmarked copies of Product Data in connection with construction.

## 1.9 SAMPLES

- A. Mount or display samples in the manner to facilitate review of qualities indicated. Prepare samples to match the Architect's sample. Include the following:
1. Specification Section number and reference.
  2. Generic description of the sample.
  3. Sample source.
  4. Product name or name of the manufacturer.
  5. Compliance with recognized standards.
  6. Availability and delivery time.

- B. Submit samples for review of size, kind, color, pattern, and texture. Submit samples for a final check of these characteristics with other elements and a comparison of these characteristics between the final submittal and the actual component as delivered and installed.
- C. Preliminary Submittals: Submit a full set of choices where samples are submitted for selection of color, pattern, texture, or similar characteristics from a range of standard choices.
  - 1. Preliminary submittals will be reviewed and returned with the Architect's mark, indicating selection and other action.
- D. Submittals: Except for Samples illustrating assembly details, workmanship, fabrication techniques, connections, operation, and similar characteristics, submit five (5) sets. One (1) set will be returned marked with the action taken.
  - 1. Maintain sets of samples, as returned, at the Project Site, for quality comparisons throughout the course of construction.
- E. Unless non-compliance with Contract Document provisions is observed, the submittal may serve as the final submittal.
  - 1. Sample sets may be used to obtain final acceptance of the construction associated with each set.

#### **1.10 QUALITY ASSURANCE SUBMITTALS**

- A. Submit quality-control submittals, including design data, certifications, manufacturer's instructions, manufacturer's field reports, and other quality-control submittals as required under other Sections of the Specifications.
- B. Certifications: Where other Sections of the Specifications require certification that a product, material, or installation complies with specified requirements; submit a notarized certification from the manufacturer certifying compliance with specified requirements.
  - 1. Signature: Certification shall be signed by an officer of the manufacturer or other individual authorized to sign documents on behalf of the company.

#### **1.11 SAMPLE WALL & CLASSROOM**

- A. Sample Wall:  
A Construction Sample Wall/Roof is required to be in place for Architect approval. All components to be included but are not limited to: masonry, fiberglass reinforced plastic, waterproofing, damp proofing and caulking,

building insulation, roofing, door frames, windows and gypsum sheathing system. All color submittals for the construction sample shall be processed in a timely manner as outlined in these specifications in order to meet this deadline. The sample wall to be constructed is shown on the drawings indicating all materials to be incorporated. Remove wall toward the end of the project as scheduled with the Owner's Project Manager.

**B. Sample Classroom:**

A sample classroom shall be constructed 30 days following the enclosure of the building. The classroom shall be complete in all respects including: finishes, millwork, unit ventilator and shelving, doors, lighting and electrical devices, clock/speaker unit and marker board/tack board units. Refer to the submittal section of the specifications for submittal schedule requirements related to the deadline for the sample classroom. The sample classroom will be used as a model for construction and for color approval by the Architect.

**1.12 REPETITIVE REVIEW**

- A. Shop Drawings, Product Data and Samples submitted for each item will be reviewed no more than two times at Owner's expense. Submittals failing to comply with Contract requirements will be reviewed at times convenient to the Architect and its consultants and at the Contractor's expense, based upon a flat rate of \$75.00 per hour not to exceed \$600.00 for each subsequent re-submittal. Contractor shall reimburse Owner for such additional submittal reviews monthly, and Owner reserves the right to deduct said reimbursement from Contractor's periodic application for payment and the Contract Sum.

**1.13 WEEKLY REPORTS**

- A. Beginning immediately after starting work on the Project, submit a weekly report on each Monday by 12:00 Noon for all work performed the previous week. Each report shall be prepared and signed by the Contractor's Superintendent, and shall contain the following information:
1. Contractor: the type of materials and/or major equipment being installed and the average number of employees working in each category that particular week. Payroll records shall be submitted showing wages paid in conformance with minimum wage rates in effect.
  2. Subcontractors: the names of the subcontractors working and the type of materials and/or major equipment being installed by each, together with the average number of employees of each subcontractor working in each category that particular week.

3. Equipment: the Contractor's construction equipment on site. Identify as idle or approximate hours in use, rental or owned.

#### **1.14 DAILY REPORTS**

- A. Submit daily all information required by the Owner, including the following:
  1. Manpower: provide an accurate count of all subcontractor and Contractor personnel, by trade, operating under the Contract. Include identification of employees meeting requirements for minority or resident employment obligations.
  2. Work performed: provide a description of the work performed and major equipment utilized.
  3. Equipment: the Contractor's construction equipment on site. Identify as idle or approximate hours in use, rental or owned.
  4. Accidents, safety violations, safety notices issued.
  5. Meetings and significant decisions.
  6. Visitors, inspections by authorities having jurisdiction, etc.
  7. Stoppages, delays, shortages, losses.
  8. Meter readings and similar recordings, monthly.
  9. Emergency procedures, field orders.
  10. Orders/requests by governing authorities.
  11. Services connected, disconnected.
  12. Equipment or system tests and start-up.
  13. Partial completions and occupancies.
  14. Substantial Completions certified.
  15. Cubic yards of concrete placed during a day, location of placement, tests performed, total cubic yardage placed to date.
  16. Weather conditions and temperature, noted at start of work, mid-day, and end of day.

### **1.15 CONSTRUCTION PHOTOGRAPHS**

- A. General: Employ competent professional photographer to take construction record photographs monthly during course of Work.
- B. Provide photographs taken during and at completion of major stages of construction, including:
  - 1. Site preparation.
  - 2. Excavation.
  - 3. Foundations.
  - 4. Steel framing.
  - 5. Masonry work.
  - 6. Roofing work.
  - 7. Interior partitions and framing.
  - 8. Interior finishes.
  - 9. Finish site work.
- C. View and Quantities Required: At each specified time, photograph each school from four different views approved by Architect. Provide three prints of each view.
- D. All photography shall be digital. Aerial drone shots at 6-month intervals are required.
- E. Costs of Photography: Pay costs for specified photography and prints. Parties requiring additional photography or prints will pay photographer directly. Furnish additional prints to Owner and Architect at commercial rates applicable at time of purchase.
- F. Prints: Provide 8 in. x 10 in. color prints on single weight print paper. Provide smooth surface, glossy finish.
- G. Identify each print on back, listing name of Project, orientation of view, date and time of exposure, name and address of photographer, and numbered identification of exposure.

- H. Techniques: Provide factual presentation, with correct exposure and focus, with high resolution and sharpness, maximum depth-of-field, and minimum distortion.
- I. Views Required: Illustrate condition of construction and state of progress. At successive periods of photography, take at least one photograph from same overall view as previously. Consult with Architect at each period of photography for instructions concerning views required.
- J. Delivery of Prints: Photos shall be logged, recorded and posted on E-Builder within 10 days of the end of each month.

#### **1.16 SCHEDULE OF VALUES**

- A. Refer to Section 01027, Applications for Payment.

#### **1.17 ARCHITECT'S ACTION**

- A. General: Architect will review submittals, stamp and indicate action, and return to Contractor. Architect will review submittals for conformance with design intent only. Architect's review and approval of submittals shall be held to limitations stated in the Conditions of the Contract. In no case shall approval or acceptance by Architect be interpreted as release of Contractor of responsibility to fulfill requirements of Contract Documents. No acceptance or approval of submittals, nor any indication or note marked by Architect on submittals, shall constitute authorization for increase in Contract Sum.
- B. Action Stamp: Architect will stamp each submittal with an action stamp. Stamp sample is indicated below:

|  |   |
|--|---|
| <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> No Exceptions       | <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> Make Corrections |
| <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> Revise and Resubmit | <input type="checkbox"/> Rejected <input type="checkbox"/> Submit                           |

Architect's review is only for general conformance with design concept and compliance with requirements of Contract Documents. Review is based on Contractor's representation that he has checked and approved this submittal and has verified dimensions, quantities, field dimensions, relation to existing work, coordination with work to be installed later, and coordination with information in previously approved submittals. Accuracy of all such information is responsibility of the Contractor.

Approval does not authorize, or relieve the Contractor of responsibility for, deviations from drawings, specifications, supplementary documents furnished by the Architect, or previously approved submittals unless the Contractor has, in writing, called the Architect's attention to such deviations at the time of submittal. The Contractor is solely responsible for the accuracy of all information in the submittal and for details of fabrication and installation. Refer to Contract Documents for further submittal requirements and limitations on scope of the Architect's review.

**LAMOUREUX, PAGANO ASSOCIATES, ARCHITECTS**

Date: \_\_\_\_\_ By: \_\_\_\_\_

C. Stamp indicates action taken as follows:

1. "NO EXCEPTIONS TAKEN": No corrections, no marks:  
Resubmission not required.
2. "MAKE CORRECTIONS NOTED": Minor amount of corrections; all items can be fabricated without further corrections to original submittal; checking is complete and all corrections are deemed obvious without ambiguity. Resubmission not required.
3. "REVISE AND RESUBMIT": Minor corrections required; items noted shall not be fabricated until further corrections of original submittal is completed and Architect-approval is obtained; checking is complete; clarify details of items noted by checker for approval; items without marks may be fabricated without further submittal. Resubmission required.
4. "REJECTED": Submittal does not conform to Contract Documents, and requires too many corrections, or is rejected for other justifiable reasons. Architect will state reasons for rejection. Correct and resubmit. Do not fabricate.
5. "SUBMIT SPECIFIED ITEM": No item, other than item specified, will conform to the Contract Documents. Architect will state reasons. Resubmit Specified Item. Do not fabricate.

D. Other Action: Submittal for information or record purposes will be returned with no action marked.

E. Required Re-submittals: Make corrections or changes to submittals required by Architect and resubmit until approved. Revise initial shop drawings or

product data, and resubmit as specified for initial submittal. Indicate changes made other than those requested by Architect. Submit new samples as required for initial submittal.

**1.18 DRAWINGS TO BUILDING DEPARTMENT**

- A. Contractor shall submit three (3) sets of fully conformed plans and specification to the City of Worcester Building Department upon application for the building permit.
  - 1. Submit drawings to architect prior to permit application for "wet stamping" of architect and engineers professional seal to the drawings. Allow up to three (3) days for this process.
  - 2. Any reduction in addenda plan must be legible.

**PART 2 - PRODUCTS (Not Applicable)**

**PART 3 - EXECUTION (Not Applicable)**

**END OF SECTION 01300**

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

## **SECTION 013100 - PROJECT MANAGEMENT AND COORDINATION**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.

#### **1.2 SUMMARY**

- A. This Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:
  - 1. Coordination Drawings.
  - 2. Administrative and supervisory personnel.
  - 3. Project meetings.
  - 4. Requests for Information (RFIs).
- B. Each contractor shall participate in coordination requirements. Certain areas of responsibility will be assigned to a specific contractor.
- C. Related Sections include the following:
  - 1. Division 00 Section 00 73 00b “BIM Requirements for Subcontractors”.
  - 2. Division 01 Section "Construction Progress Documentation" for preparing and submitting Contractor's Construction Schedule.
  - 3. Division 01 Section "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
  - 4. Division 01 Section "Closeout Procedures" for coordinating closeout of the Contract.
  - 5. Division 01 Section 013150 “Project Management Communications” for electronic document submissions.

#### **1.3 DEFINITIONS**

- A. RFI: Request for Information from the Contractor seeking an interpretation or clarification of the Contract Documents submitted to the Architect in electronic form on Procore.

#### **1.4 COORDINATION**

- A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections, that depend on each other for proper installation, connection, and operation.
  - 1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
  - 2. Coordinate installation of different components with other contractors to ensure maximum accessibility for required maintenance, service, and repair.
  - 3. Make adequate provisions to accommodate items scheduled for later installation.
  - 4. Where availability of space is limited, coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair of all components, including mechanical and electrical.
- B. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.
  - 1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.
- C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other contractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
  - 1. Preparation of Contractor's Construction Schedule.
  - 2. Preparation of the Schedule of Values.
  - 3. Installation and removal of temporary facilities and controls.
  - 4. Delivery and processing of submittals.
  - 5. Progress meetings.
  - 6. Preinstallation conferences.
  - 7. Project closeout activities.
  - 8. Startup and adjustment of systems.
  - 9. Project closeout activities.
- D. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials.
  - 1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. Refer to other Sections for disposition of salvaged materials that are designated as Owner's property.

## **1.5 SUBMITTALS**

- A. Coordination Drawings: Prepare Coordination Drawings if limited space availability necessitates maximum utilization of space for efficient installation of different components or if coordination is required for installation of products and materials fabricated by separate entities.
  - 1. Content: Project-specific information, drawn accurately to scale. Do not base Coordination Drawings on reproductions of the Contract Documents or standard printed data. Include the following information, as applicable:
    - a. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
    - b. Indicate required installation sequences.
    - c. Indicate dimensions shown on the Contract Drawings and make specific note of dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect. Minor dimension changes and difficult installations will not be considered changes to the Contract.
  - 2. Sheet Size: At least 8-1/2 by 11 inches but no larger than 36 by 48 inches.
  - 3. Number of Copies:
    - a. Submit three (3) opaque copies of each submittal for resolution of conflicts to the Architect who will return one (1) copy.
    - b. Submit five (5) opaque copies of final Coordination Drawings which reflect the as-built work. **Coordination Drawings are not Project Record Drawings as specified in Section 017839 - Project Record Drawings.**
  - 4. Refer to individual Sections for additional coordination drawing requirements for Work in those Sections.
- B. Key Personnel Names: Within fifteen (15) days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses, and field office and cell or mobile telephone numbers, home office telephone numbers. Post copies of list in Project meeting room, in temporary field office, and by each temporary telephone. Keep list current at all times.
- C. Emergency List: Provide names, addresses, home, cell or mobile telephone, and office telephone numbers of individuals assigned to be notified and respond in an emergency during work hours and after normal work hours and who are authorized to order emergency work to be done to protect persons and property. Organize the list so that the first person to be called is the first person on the list. The Architect will furnish this list to the city's "911" dispatcher.

## 1.6 ADMINISTRATIVE AND SUPERVISORY PERSONNEL

- A. General: In addition to Project superintendent, provide other administrative and supervisory personnel as required for proper performance of the Work.

## **1.7 PROJECT MEETINGS**

- A. General: Schedule and conduct meetings and conferences at Project site, unless otherwise indicated.
  - 1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times.
  - 2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
  - 3. Minutes: Record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner, Owner's Project Manager, and Architect, within three (3) days of the meeting.
- B. Preconstruction Conference: Schedule a preconstruction conference before starting construction, at a time convenient to Owner, Owner's Project Manager, and Architect, but no later than twenty-one (21) days after execution of the Agreement. Hold the conference at Project site or another convenient location. Conduct the meeting to review responsibilities and personnel assignments.
  - 1. Attendees: Authorized representatives of Owner, Owner's Project Manager, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
  - 2. Agenda: Discuss items of significance that could affect progress, including the following:
    - a. Tentative construction schedule.
    - b. Phasing.
    - c. Critical work sequencing and long-lead items.
    - d. Designation of key personnel and their duties.
    - e. Procedures for processing field decisions and Change Orders.
    - f. Procedures for RFIs.
    - g. Procedures for testing and inspecting.
    - h. Procedures for processing Applications for Payment.
    - i. Submittal procedures.
    - j. LEED and/or MACHPS requirements.
    - k. Preparation of Record Documents.
    - l. Use of the premises and existing building.
    - m. Work restrictions.
    - n. Owner's occupancy requirements.
    - o. Responsibility for temporary facilities and controls.

- p. Construction waste management and recycling.
  - q. Parking availability.
  - r. Office, work, and storage areas.
  - s. Equipment deliveries and priorities.
  - t. Safety Training.
  - u. First aid.
  - v. Security.
  - w. Progress cleaning.
  - x. Working hours.
3. Minutes: Record and distribute meeting minutes.
- C. Preinstallation Conferences: Conduct a pre-installation conference at Project site before each construction activity that requires coordination with other construction.
- 1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect and Owner's Project Manager of scheduled meeting dates.
  - 2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
    - a. Options.
    - b. Related RFIs.
    - c. Related Change Orders.
    - d. Purchases.
    - e. Deliveries.
    - f. Submittals.
    - g. Review of mockups.
    - h. Possible conflicts.
    - i. Compatibility problems.
    - j. Time schedules.
    - k. Weather limitations.
    - l. Manufacturer's written recommendations.
    - m. Warranty requirements.
    - n. Compatibility of materials.
    - o. Acceptability of substrates.
    - p. Space and access limitations.
    - q. Testing and inspecting requirements.
    - r. Installation procedures.
    - s. Coordination with other work.
    - t. Protection of adjacent work.
    - u. Protection of construction and personnel.
  - 3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.

4. Reporting: Distribute minutes of the meeting to each party present and to parties who should have been present.
  5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.
- D. Progress Meetings: Conduct progress meetings at monthly intervals. Coordinate dates of meetings with preparation of payment requests.
1. Attendees: In addition to representatives of Owner, Owner's Project Manager, and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
  2. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
    - a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's Construction Schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
      - 1) Review schedule for next period.
    - b. Review present and future needs of each entity present, including the following:
      - 1) Interface requirements.
      - 2) Sequence of operations.
      - 3) Status of submittals.
      - 4) Deliveries.
      - 5) Off-site fabrication.
      - 6) Access.
      - 7) Site utilization.
      - 8) Temporary facilities and controls.
      - 9) Work hours.
      - 10) Hazards and risks.
      - 11) Progress cleaning.
      - 12) Quality and work standards.
      - 13) Status of correction of deficient items.
      - 14) Field observations.
      - 15) RFIs.

- 16) Status of proposal requests.
  - 17) Pending changes.
  - 18) Status of Change Orders.
  - 19) Pending claims and disputes.
  - 20) Documentation of information for payment requests.
3. Minutes: Record the meeting minutes.
  4. Reporting: Distribute minutes of the meeting to each party present and to parties who should have been present.
    - a. Schedule Updating: Revise Contractor's Construction Schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.
- E. Coordination Meetings: Conduct Project coordination meetings at monthly intervals. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.
1. Attendees: In addition to representatives of Owner, Owner's Project Manager, and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
  2. Agenda: Review and correct or approve minutes of the previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
    - a. Combined Contractor's Construction Schedule: Review progress since the last coordination meeting. Determine whether each contract is on time, ahead of schedule, or behind schedule, in relation to Combined Contractor's Construction Schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
    - b. Schedule Updating: Revise Combined Contractor's Construction Schedule after each coordination meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
    - c. Review present and future needs of each contractor present, including the following:
      - 1) Interface requirements.
      - 2) Sequence of operations.
      - 3) Status of submittals.
      - 4) Deliveries.

- 5) Off-site fabrication.
  - 6) Access.
  - 7) Site utilization.
  - 8) Temporary facilities and controls.
  - 9) Work hours.
  - 10) Hazards and risks.
  - 11) Progress cleaning.
  - 12) Quality and work standards.
  - 13) Change Orders.
3. Reporting: Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

## **1.8 REQUESTS FOR INFORMATION (RFIs)**

- A. Procedure: Immediately on discovery of the need for interpretation or clarification of the Contract Documents prepare and submit via Procore an RFI in the electronic form specified. No discussion in meetings or other correspondence shall be used for this purpose.
  1. RFIs shall originate with Contractor. RFIs submitted by entities other than Contractor will be returned with no response.
  2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.
  3. The RFI shall request a single interpretation or clarification appropriate to the phase of construction.
    - a. Lists of multiple questions covering a variety of subjects will be returned to the Contractor to be closed and removed from the current list. Example: "1) What is the light fixture designated L-29? 2) Can other data wiring colors be used in lieu of the specified colors? 3) Is the electrical contractor responsible for coring 3" diameter holes in floor slabs?" These and similar questions should be asked on individual RFIs which will allow each to be answered appropriately.
    - b. Interpretation or clarification far in the advance of construction work being done or in advance of approved submittals will be returned to the Contractor to be closed and removed from the current list. Example: "What is the floor tile color for the toilet rooms?" When asked before floor tile submittals have been submitted or approved.
- B. Content of the RFI: Include a detailed, legible description of item needing interpretation and the following:
  1. RFI number, automatically numbered sequentially, by Procore.

2. Subject.
  3. Author.
  4. Date Created.
  5. Date Due.
  6. Specification Section.
  7. Information Requested.
  8. Attachments shall be electronic files in Adobe Acrobat PDF format. Include drawings, descriptions, measurements, photos, Product Data, Shop Drawings, and other information necessary to fully describe items needing interpretation as Attachments:
    - a. Specification Section number and title and related paragraphs, as appropriate.
    - b. Drawing number and detail references, as appropriate.
    - c. Field dimensions and conditions, as appropriate.
    - d. Contractor's suggested solution(s). If Contractor's solution(s) impact the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
    - e. Supplementary drawings prepared by Contractor shall include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments.
  9. Hard-Copy Attachments: Print a copy of the Procore RFI and include the copy with and hard copy materials. Identify each page of attachments with the RFI number and sequential page number.
- C. Architect's Action: Architect will review each RFI, determine action required, and return it. Allow ten (10) working days for Architect's response for each RFI. RFIs received after 1:00 p.m. will be considered as received the following working day.
1. The following RFIs will be returned without action:
    - a. Requests for approval of submittals.
    - b. Requests for approval of substitutions.
    - c. Requests for coordination information already indicated in the Contract Documents.
    - d. Requests for adjustments in the Contract Time or the Contract Sum.
    - e. Requests for interpretation of Architect's actions on submittals.
    - f. Incomplete RFIs or RFIs with numerous errors.
    - g. RFIs with for more than one interpretation or clarification.
    - h. RFI for interpretation or clarification for future work.
    - i. Requests for the location of items of work in the Contract Documents shall be answered by the Contractor.
- D. Architect's action may include a request for missing or additional information, in which case Architect's time for response will start again.

- E. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven (7) days if Contractor disagrees with response.
- F. If the Contractor believes the Architect's action on an RFI response warrants a change in the Contract Time or the Contract Sum according to Division 01 Section "Contract Modification Procedures," notify Architect and Owner's Project Manager in writing within ten 10 working days of receipt of the RFI response.
- G. RFI Log: Prepare, maintain, and submit a tabular log of RFIs submitted to the Architect, organized by the RFI number, monthly as a 11" x 8 ½" Microsoft Excel Spreadsheet.
  - 1. Heading:
    - a. Project name.
    - b. Name and address of Contractor.
    - c. Name and address of Architect.
    - d. Owner's Project Manager.
  - 2. Footing:
    - a. Date of Log.
    - b. Page Number and Number of Pages.
  - 3. Columns:
    - a. RFI number (include all sequential RFI numbers).
    - b. RFI Subject.
    - c. Date the RFI was submitted to the Architect.
    - d. Date the Response was returned to the Contractor.
    - e. Incomplete information. Date the RFI was resubmitted with additional information to the Architect.
    - f. Date the Response to the resubmitted RFI was returned to the Contractor. Response is a minor change, no change in contract sum or time is required, or the response requires a change in contract sum or time.
    - g. Date notice for a change in contract sum or time is submitted to the Architect for a Request for Proposal (RFP).
    - h. Date the Request for Proposal (RFP) was received by the Contractor.
    - i. Record the Request for Proposal (RFP) Number.

**Used) PART 3 - EXECUTION**

**(Not Used)**

## **SECTION 013150 - PROJECT MANAGEMENT COMMUNICATIONS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.
- B. Refer to specification SECTION 01300 – SUBMITTALS and SECTION 013100 – PROJECT MANAGEMENT AND COORDINATION for additional information.

#### **1.2 SUMMARY**

- A. The Construction Manager and Sub-contractors are invited to join the Architect, Consultants, Owner's Project Manager, and Owner in the Internet based communications and document storage service provided by Procore® 6 during this project through the end of commissioning. Contractor and Sub-contractor users should contact the Architects to be added as a user and pay the per user fee of \$600 per year directly to Procore.
- B. The use of Procore® does not replace or change any contractual responsibilities of the participants. The project database is on-line and fully functional.
- C. Users: User registration, payment of user fees, electronic and computer equipment, and Internet connections are the responsibility of each participant. The sharing of user accounts is prohibited. Each communication is tracked by the system and provides evidence of delivery upon opening by the user. User accounts are not to be used as "company" accounts and must be to an individual within a company.
- D. Training: Procore® will provide one 3 ½ hour group training session scheduled by the Architect the cost of which will be paid for by the city. Generally there will be a morning and afternoon training session in one day. Users may attend the scheduled training sessions on a first come first served basis. The contractor may request additional training sessions at his expense which will be honored by Procore when possible.
- E. Support: Procore® 6 provides extensive on-line help files and on-going support for the system.
- F. Project Archive: The project is intended to be available on-line indefinitely. A DVD archive may be ordered at cost. The archive set will contain only documents that the user had security access to during construction. All legal rights in any discovery process

are retained. Archive material shall be ordered from Procore® and is subject to the approval of the Architect.

- G. Copyrights and Ownership: Nothing in this specification or the subsequent communications supersedes the parties' obligations and rights for copyright or document ownership as established by the Contract Documents. The use of CAD files, processes or design information distributed in this system is intended only for the project specified herein. Any other use is prohibited without prior written permission of the author or document owner.
- H. Purpose: The intent of using Procore® is to improve project work efforts by promoting timely initial communications and responses. Secondly, to reduce the number of paper documents while providing improved record keeping by creation of electronic document files.
- I. Requirements and Cost: The Owner and his representatives, the Construction Manager and his representatives, the Architect and his consultants, and the Contractor and his sub-contractors and suppliers are urged to use Procore® during construction of this project through the twelve (12) month commissioning period after the date of Substantial Completion.
  - 1. The Owner has provided the Procore® service. The Contractor and his sub-contractors and suppliers should consider obtaining user licenses according to the following schedule:
    - a. Contract value under \$ 100,000 no user required.
    - b. Contract value \$100,000 through \$1,000,000 provide one (1) user.
    - c. Contract value \$100,000 through \$2,000,000 provide two (2) users.
    - d. Contract value \$100,000 through \$3,000,000 provide three (3) users.
    - e. Contract value \$100,000 through \$4,000,000 provide four (4) users.
    - f. Contract values over \$4,000,000 provide additional users as needed by a contractor.
  - 2. The Contractor should strongly urge his sub-contractors and suppliers to obtain user licenses within 15 days commencing the execution of the Owner / Contractor Agreement. Procore® training will be scheduled and commence within 30 days thereafter. Each user will receive a training session at a facility within the City.
- J. Authorized Users: Access to the web site will be by individuals who are licensed users.
  - 1. Individuals may use the User Application included in these specifications or may request the User Application separately.
  - 2. Submit completed user application forms one for each user, pay the user fee on-line and keep your receipt.
  - 3. Licensed users will be contacted directly through Procore®, and be assigned a temporary user password.
  - 4. Individuals shall be responsible for the proper use of their passwords and access to data as agents of the company in which they are employed.

- K. Administrative Users: Administrative users have access and control of user licenses and all posted items. PLEASE DO NOT POST PRIVATE OR YOUR COMPANY'S CONFIDENTIAL ITEMS IN THE DATABASE! Improper or abusive language toward any party or repeated posting of items intended to deceive or disrupt the work of the project will not be tolerated and will result in deletion of the offensive items and revocation of user license at the sole discretion of the Administrative User(s).
- L. Communications: The use of fax, email and courier communication for this project is discouraged in favor of using Procore® to send messages. Communication functions are as follows:
1. Document Integrity and Revisions:
    - a. Documents, comments, drawings and other records posted to the system remain for the project record. The authorship time and date is recorded for each document submitted to the system. Submitting a new document or record with a unique ID, authorship, and time stamp is the method used to make modifications or corrections.
    - b. It is easy to identify revised or superseded documents and their predecessors.
  2. Document Security:
    - a. The system provides shall for security group assignment to respect the contractual parties communication except for Administrative Users. DO NOT POST PRIVATE OR YOUR COMPANY CONFIDENTIAL ITEMS IN THE DATABASE!
  3. Document Integration:
    - a. Documents of various types may be logically related to one another and discoverable. For example, requests for information, daily field reports, supplemental sketches and photographs can be referenced as related records.
  4. Reporting:
    - a. On-line report summaries are available for work in progress, and for each documents. Summary reports generated by the system shall be available for team members.
  5. Notifications and Distribution:
    - a. Document distribution to project members shall be accomplished both within the extranet system and via email as appropriate. Project document distribution to parties outside of the project communication system may be accomplished by email of outgoing documents and attachments, readable by a standard email client.
  6. Required Document Types:
    - a. RFI, Request for Information.
    - b. Submittals, including record numbering by drawing and specification section.
    - c. Transmittals, including record of documents and materials delivered in hard copy.
    - d. Meeting Minutes.
    - e. Application for Payments (Draft or Pencil).

- f. Review Comments.
  - g. Daily Field Reports.
  - h. Construction Photographs.
  - i. Drawings.
  - j. Supplemental Sketches.
  - k. Schedules.
  - l. Specifications.
- M. Record Keeping: Except for paper documents, which require original signatures and large format documents (greater than 8½ x 11 inches), all other 8½ x 11 inches documents should be submitted in electronic form on Procore® web site by users.
- N. The Owner and his representatives, the Architect and his consultants, and the Contractor and his sub-contractors and suppliers at every tier shall respond to documents received in electronic form on the web site, and consider them as if received in paper document form.
  - 1. The Owner and his representatives, the Construction Manager and his representatives, the Architect and his consultants, and the Contractor and his sub-contractors and suppliers at every tier reserves the right to and shall reply or respond by transmissions in electronic form on the web site to documents actually received in paper document form.
  - 2. The Owner and his representatives, the Construction Manager and his representatives, the Architect and his consultants, and the Contractor and his sub-contractors and suppliers at every tier reserves the right to and shall copy any paper document into electronic form and make same available on the web site.
    - a. The following are some but not all of the paper documents which require original signature:
      - 1) Contract
      - 2) Change Orders
      - 3) Application & Certificates for Payment
      - 4) Construction Change Directives (CCD)
      - 5) Forms and reports in Sections 00800, 00900, & 00950
- O. Minimum Equipment and Internet Connection: In addition to other requirements specified in this Section, an effective personal computer system is needed for users:
  - 1. User should have a high-speed Internet access, i.e. DSL, local cable company's Internet connection, or T1 connection.
  - 2. Minimum system<sup>1</sup> and software requirements:
    - a. Desktop or laptop configuration:
      - 1) PC system 1000 MHz Intel Pentium III or equivalent AMD processor
      - 2) Or, Macintosh 660 AV (Power PC)
      - 3) 512 MB Ram
      - 4) Display capable of SVGA (1024 x 768 pixels) 256 colors display

---

<sup>1</sup> The minimum system herein will not be sufficient for many tasks and may not be able to process all documents and files stored in the TeamBuilder® Documents area.

- 5) 101 key Keyboard
- 6) Mouse or other pointing device
- b. Operating system and software shall be properly licensed.
  - 1) Internet Explorer or other browser (current version is a free distribution for download). This specification is not intended to restrict the host server or client computers provided that industry standard HTTP clients may access the published content.
  - 2) Adobe Acrobat Reader (current version is a free distribution for download).
  - 3) Or, users intending to scan and upload to the documents area of e-Builder® should have Adobe Acrobat current version must be purchased or equivalent.
  - 4) Users should have the standard Microsoft Office Suite 2003 version or the equivalent.
  - 5) Users may download the latest free distribution of viewers, by Autodesk, if they do not have other CAD software able to view Autocad drawing files. An effort will be made to keep the dwf drawings updated from the dwg files.PRODUCTS (Not Applicable.)

## SECTION 013200 - CONSTRUCTION PROGRESS DOCUMENTATION

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

#### 1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:
  - 1. Preliminary Construction Schedule.
  - 2. Contractor's Construction Schedule.
  - 3. Submittals Schedule.
  - 4. Daily construction reports.
  - 5. Material location reports.
  - 6. Field condition reports.
  - 7. Special reports.
- B. Related Sections include the following:
  - 1. Division 01 Section "Multiple Contract Summary" for preparing a combined Contractor's Construction Schedule.
  - 2. Division 01 Section "Payment Procedures" for submitting the Schedule of Values.
  - 3. Division 01 Section "Project Management and Coordination" for submitting and distributing meeting and conference minutes.
  - 4. Division 01 Section "Photographic Documentation" for submitting construction photographs.
  - 5. Division 01 Section "Submittal Procedures" for submitting schedules and reports.
  - 6. Division 01 Section "Quality Requirements" for submitting a schedule of tests and inspections.

#### 1.3 DEFINITIONS

- A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.
  - 1. Critical activities are activities on the critical path. They must start and finish on the planned early start and finish times.
  - 2. Predecessor Activity: An activity that precedes another activity in the network.

- 3. Successor Activity: An activity that follows another activity in the network.
- B. Cost Loading: The allocation of the Schedule of Values for the completion of an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum, unless otherwise approved by Architect.
- C. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of Project.
- D. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.
- E. Event: The starting or ending point of an activity.
- F. Float: The measure of leeway in starting and completing an activity.
  - 1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
  - 2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
  - 3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.
- G. Fragnet: A partial or fragmentary network that breaks down activities into smaller activities for greater detail.
- H. Major Area: A story of construction, a separate building, or a similar significant construction element.
- I. Milestone: A key or critical point in time for reference or measurement.
- J. Network Diagram: A graphic diagram of a network schedule, showing activities and activity relationships.
- K. Resource Loading: The allocation of manpower and equipment necessary for the completion of an activity as scheduled.

#### 1.4 SUBMITTALS

- A. Submittals Schedule: Submit three (3) copies of schedule. Arrange the following information in a tabular format:
  - 1. Scheduled date for first submittal.

2. Specification Section number and title.
  3. Submittal category (action or informational).
  4. Name of subcontractor.
  5. Description of the Work covered.
  6. Scheduled date for Architect's and Owner's Project Manager's final release or approval.
- B. Preliminary Construction Schedule: Submit two (2) opaque copies.
1. Approval of cost-loaded preliminary construction schedule will not constitute approval of Schedule of Values for cost-loaded activities.
- C. Preliminary Network Diagram: Submit two (20 opaque copies, large enough to show entire network for entire construction period. Show logic ties for activities.
- D. Contractor's Construction Schedule: Submit two (20 opaque copies of initial schedule, large enough to show entire schedule for entire construction period.
1. Submit an electronic copy of schedule, Adobe Acrobat pdf file, on CD-R, and labeled to comply with requirements for submittals. Include type of schedule (Initial or Updated) and date on label.
- E. CPM Reports: Concurrent with CPM schedule, submit three (3) copies of each of the following computer-generated reports. Format for each activity in reports shall contain activity number, activity description, cost and resource loading, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.
1. Activity Report: List of all activities sorted by activity number and then early start date, or actual start date if known.
  2. Logic Report: List of preceding and succeeding activities for all activities, sorted in ascending order by activity number and then early start date, or actual start date if known.
  3. Total Float Report: List of all activities sorted in ascending order of total float.
  4. Earnings Report: Compilation of Contractor's total earnings from commencement of the Work until most recent Application for Payment.
- F. Daily Construction Reports: Submit two (2) copies at weekly intervals.
- G. Material Location Reports: Submit two (2) copies at monthly intervals.
- H. Field Condition Reports: Submit two (2) copies at time of discovery of differing conditions.
- I. Special Reports: Submit two (2) copies at time of unusual event.

## 1.5 QUALITY ASSURANCE

- A. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to the Preliminary Construction Schedule and Contractor's Construction Schedule, including, but not limited to, the following:
1. Review software limitations and content and format for reports.
  2. Verify availability of qualified personnel needed to develop and update schedule.
  3. Discuss constraints, including phasing, work stages, area separations, interim milestones, and partial Owner occupancy.
  4. Review delivery dates for Owner-furnished products.
  5. Review schedule for work of Owner's separate contracts.
  6. Review time required for review of submittals and resubmittals.
  7. Review requirements for tests and inspections by independent testing and inspecting agencies.
  8. Review time required for completion and startup procedures.
  9. Review and finalize list of construction activities to be included in schedule.
  10. Review submittal requirements and procedures.
  11. Review procedures for updating schedule.

## 1.6 COORDINATION

- A. Coordinate preparation and processing of schedules and reports with performance of construction activities and with scheduling and reporting of separate contractors.
- B. Coordinate Contractor's Construction Schedule with the Schedule of Values, list of subcontracts, Submittals Schedule, progress reports, payment requests, and other required schedules and reports.
1. Secure time commitments for performing critical elements of the Work from parties involved.
  2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

## PART 2 - PRODUCTS

### 2.1 SUBMITTALS SCHEDULE

- A. Preparation: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, resubmittal, ordering, manufacturing, fabrication, and delivery when establishing dates.
1. Coordinate Submittals Schedule with list of subcontracts, the Schedule of Values, and Contractor's Construction Schedule.
  2. Initial Submittal: Submit concurrently with preliminary bar-chart schedule. Include submittals required during the first 60 days of construction. List those

required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.

3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's Construction Schedule.

## 2.2 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

- A. Procedures: Comply with procedures contained in AGC's "Construction Planning & Scheduling."
- B. Time Frame: Extend schedule from date established for commencement of the Work and the Notice to Proceed to date of Final Completion.
  1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.
- C. Activities: Treat each story or separate area as a separate numbered activity for each principal element of the Work. Comply with the following:
  1. Activity Duration: Define activities so no activity is longer than twenty (20) days, unless specifically allowed by Architect.
  2. Procurement Activities: Include procurement process activities for the following long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
    - a. Insert list of major items or pieces of equipment.
  3. Submittal Review Time: Include review and resubmittal times indicated in Division 01 Section "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's Construction Schedule with Submittals Schedule.
  4. Startup and Testing Time: Include days for startup and testing.
  5. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Architect's and Owner's Project Manager's administrative procedures necessary for certification of Substantial Completion.
- D. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.
  1. Phasing: Arrange list of activities on schedule by phase.
  2. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.

3. Owner-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Division 01 Section "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
4. Work Restrictions: Show the effect of the following items on the schedule:
  - a. Coordination with existing construction.
  - b. Limitations of continued occupancies.
  - c. Uninterruptible services.
  - d. Partial occupancy before Substantial Completion.
  - e. Use of premises restrictions.
  - f. Provisions for future construction.
  - g. Seasonal variations.
  - h. Environmental control.
5. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:
  - a.
  - b. Submittals.
  - c. Purchases.
  - d. Mockups.
  - e. Fabrication.
  - f. Sample testing.
  - g. Deliveries.
  - h. Installation.
  - i. Tests and inspections.
  - j. Adjusting.
  - k. Curing.
  - l. Startup and placement into final use and operation.
6. Area Separations: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:
  - a. Structural completion.
  - b. Permanent space enclosure.
  - c. Completion of mechanical installation.
  - d. Completion of electrical installation.
  - e. Substantial Completion.
- E. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and Final Completion.
  1. Insert additional milestones not indicated elsewhere.

- F. Cost Correlation: At the head of schedule, provide a cost correlation line, indicating planned and actual costs. On the line, show dollar volume of the Work performed as of dates used for preparation of payment requests.
  - 1. Refer to Division 01 Section "Payment Procedures" for cost reporting and payment procedures.
  - 2. Contractor shall assign cost to construction activities on the CPM schedule. Costs shall not be assigned to submittal activities unless specified otherwise but may, with Architect's approval, be assigned to fabrication and delivery activities. Costs shall be under required principal subcontracts for testing and commissioning activities, operation and maintenance manuals, punch list activities, Project Record Documents, and demonstration and training (if applicable), in the amount of 5 percent of the Contract Sum.
  - 3. Each activity cost shall reflect an accurate value subject to approval by Architect.
  - 4. Total cost assigned to activities shall equal the total Contract Sum.
- G. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using fragnets to demonstrate the effect of the proposed change on the overall project schedule.
- H. Computer Software: Prepare schedules using a program that has been developed specifically to manage construction schedules. Provide one (1) full complete working copies of the software to the Owner's Project Manager.
  - 1. Software shall be able to compare prior schedule to current and list the differences between the two versions.

## 2.3 CONTRACTOR'S PROGRESS SCHEDULE

- A. Provide a Bar-Chart Schedule prior to the first application for payment, see Section 013300, 1.4 for requirements and sample.

## 2.4 CONTRACTOR'S CONSTRUCTION SCHEDULE (CPM SCHEDULE)

- A. General: Prepare network diagrams using AON (activity-on-node) format.
- B. Preliminary Network Diagram: Submit diagram within 14 days of date established for commencement of the Work. Outline significant construction activities for the first 60 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.
- C. CPM Schedule: Prepare Contractor's Construction Schedule using a computerized, cost- and resource-loaded, time-scaled CPM network analysis diagram for the Work.

1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 30days after date established for commencement of the Work.
    - a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates, regardless of Architect's approval of the schedule.
  2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
  3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
  4. Use "one workday" as the unit of time. Include list of nonworking days and holidays incorporated into the schedule.
- D. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the preliminary network diagram, prepare a skeleton network to identify probable critical paths.
1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:
    - a. Preparation and processing of submittals.
    - b. Mobilization and demobilization.
    - c. Purchase of materials.
    - d. Delivery.
    - e. Fabrication.
    - f. Utility interruptions.
    - g. Installation.
    - h. Work by Owner that may affect or be affected by Contractor's activities.
    - i. Testing[ and commissioning].
  2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
  3. Processing: Process data to produce output data on a computer-drawn, time- scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
  4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.
    - a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.

- E. Initial Issue of Schedule: Prepare initial network diagram from a list of straight "early start-total float" sort. Identify critical activities. Prepare tabulated reports showing the following:
1. Contractor or subcontractor and the Work or activity.
  2. Description of activity.
  3. Principal events of activity.
  4. Immediate preceding and succeeding activities.
  5. Early and late start dates.
  6. Early and late finish dates.
  7. Activity duration in workdays.
  8. Total float or slack time.
  9. Average size of workforce.
  10. Dollar value of activity (coordinated with the Schedule of Values).
- F. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:
1. Identification of activities that have changed.
  2. Changes in early and late start dates.
  3. Changes in early and late finish dates.
  4. Changes in activity durations in workdays.
  5. Changes in the critical path.
  6. Changes in total float or slack time.
  7. Changes in the Contract Time.
- G. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.
1. In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
  2. In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
  3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
  4. Prepare list for ease of comparison with payment requests; coordinate timing with progress meetings.
    - a. In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.
    - b. Submit value summary printouts one week before each regularly scheduled progress meeting.

## 2.5 REPORTS

- A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:

1. List of subcontractors at Project site.
2. List of separate contractors at Project site.
3. Approximate count of personnel at Project site.
4. Equipment at Project site.
5. Material deliveries.
6. High and low temperatures and general weather conditions.
7. Accidents.
8. Meetings and significant decisions.
9. Unusual events (refer to special reports).
10. Stoppages, delays, shortages, and losses.
11. Meter readings and similar recordings.
12. Emergency procedures.
13. Orders and requests of authorities having jurisdiction.
14. Change Orders received and implemented.
15. Construction Change Directives received and implemented.
16. Services connected and disconnected.
17. Equipment or system tests and startups.
18. Partial Completions and occupancies.
19. Substantial Completions authorized.

- B. Material Location Reports: At monthly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site.
- C. Field Condition Reports: Immediately on discovery of a difference between field conditions and the Contract Documents, prepare and submit a detailed report. Submit with a request for interpretation on CSI Form 13.2A. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

## 2.6 SPECIAL REPORTS

- A. General: Submit special reports directly to Owner within one day of an occurrence. Distribute copies of report to parties affected by the occurrence.
- B. Reporting Unusual Events: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

## PART 3 - EXECUTION

### 3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

- A. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.
  - 1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
  - 2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
  - 3. As the Work progresses, indicate Actual Completion percentage for each activity.
- B. Distribution: Distribute copies of approved schedule to Architect[, Owner's Project Manager,] Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.
  - 1. Post copies in Project meeting rooms and temporary field offices.
  - 2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

END OF SECTION 013200

## SECTION 014000 - QUALITY REQUIREMENTS

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section..

#### 1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for quality assurance and quality control.
- B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.
  - 1. Provide specific quality-assurance and comply with quality-control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
  - 2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
  - 3. Requirements for Contractor to facilitate quality-assurance and quality-control services required by Architect, Owner, Owner's Project Manager, or authorities having jurisdiction are not limited by provisions of this Section.
    - a. Structural Tests and Inspections of the completed work in-place paid for by the Owner:
      - 1) Soils under foundations and slabs-on-grade.
      - 2) Concrete Materials.
      - 3) Structural Steel, and metal deck.
      - 4) Miscellaneous Metal Stairs.
      - 5) Light Gage Metal Framing.
    - b. Building, Plumbing and Gas, Wiring, Fire Protection, Fire Alarm, Food Service, Elevator, Architectural Access and other inspections by authorities having jurisdiction.
- C. Related Sections include the following:

1. Division 01 Section "Construction Progress Documentation" for developing a schedule of required tests and inspections.
2. Division 01 Section "Cutting and Patching" for repair and restoration of construction disturbed by testing and inspecting activities.
3. Divisions 02 through 49 Sections for specific test and inspection requirements.

### 1.3 DEFINITIONS

- A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by Architect or Owner's Project Manager.
- C. Mockups: Full-size, physical assemblies that are constructed on-site. Mockups are used to verify selections made under sample submittals, to demonstrate aesthetic effects and, where indicated, qualities of materials and execution, and to review construction, coordination, testing, or operation; they are not Samples. Approved mockups establish the standard by which the Work will be judged.
- D. Laboratory Mockups: Full-size, physical assemblies that are constructed at testing facility to verify performance characteristics.
- E. Preconstruction Testing: Tests and inspections that are performed specifically for the Project before products and materials are incorporated into the Work to verify performance or compliance with specified criteria.
- F. Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with industry standards.
- G. Source Quality-Control Testing: Tests and inspections that are performed at the source, i.e., plant, mill, factory, or shop.
- H. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- I. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.
- J. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.

1. Using a term such as "carpentry" does not imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as "carpenter." It also does not imply that requirements specified apply exclusively to tradespeople of the corresponding generic name.
- K. Experienced: When used with an entity, "experienced" means having successfully completed a minimum of five (5) previous projects similar in size and scope to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

#### 1.4 CONFLICTING REQUIREMENTS

- A. General: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer uncertainties and requirements that are different, but apparently equal, to Architect for a decision before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

#### 1.5 SUBMITTALS

- A. Qualification Data: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.
- B. Schedule of Tests and Inspections: Prepare in tabular form and include the following:
  1. Specification Section number and title.
  2. Description of test and inspection.
  3. Identification of test and inspection methods.
  4. Number of tests and inspections required.
  5. Entity responsible for performing tests and inspections.
- C. Reports: Prepare and submit certified written reports that include the following:
  1. Date of issue.
  2. Project title and number.
  3. Name, address, and telephone number of testing agency.
  4. Dates and locations of samples and tests or inspections.
  5. Complete test or inspection data.

6. Test and inspection results and an interpretation of test results.
  7. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
  8. Name and signature of laboratory inspector.
- D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

## 1.6 QUALITY ASSURANCE

- A. General: Qualifications paragraphs in this Article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
- B. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
- C. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar to those indicated for this Project in material, design, and extent.
- F. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 548; and with additional qualifications specified in individual Sections; and where required by authorities having jurisdiction, that is acceptable to authorities.
1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
  2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.
- G. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect

installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

- H. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect.
  2. Notify Architect and Owner's Project Manager seven (7) days in advance of dates and times when mockups will be constructed.
  3. Demonstrate the proposed range of aesthetic effects and workmanship.
  4. Obtain Architect's approval of mockups before starting work, fabrication, or construction.
    - a. Allow seven (7) days for initial review and each re-review of each mockup.
  5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
  6. Demolish and remove mockups when directed.

#### 1.7 QUALITY CONTROL

- A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.
1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
  2. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor, and the Contract Sum will be adjusted by Change Order.
- B. Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
1. Where services are indicated as Contractor's responsibility, engage a qualified testing agency to perform these quality-control services.
    - a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.
  2. Notify testing agencies at least [24] <Insert number> hours in advance of time when Work that requires testing or inspecting will be performed.

3. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
  4. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
  5. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.
- C. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Division 01 Section "Submittal Procedures."
- D. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.
- E. Testing Agency Responsibilities: Cooperate with Architect[, Owner's Project Manager,] and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.
1. Notify Architect[, Owner's Project Manager,] and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
  2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
  3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
  4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
  5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
  6. Do not perform any duties of Contractor.
- F. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
1. Access to the Work.
  2. Incidental labor and facilities necessary to facilitate tests and inspections.
  3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
  4. Facilities for storage and field curing of test samples.
  5. Delivery of samples to testing agencies.
  6. Preliminary design mix proposed for use for material mixes that require control by testing agency.

7. Security and protection for samples and for testing and inspecting equipment at Project site.
- G. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
  1. Schedule times for tests, inspections, obtaining samples, and similar activities.
- H. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Submit schedule within 30 days of date established for the Notice to Proceed.
  1. Distribution: Distribute schedule to Owner, Architect, Owner's Project Manager, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

#### 1.8 SPECIAL TESTS AND INSPECTIONS

- A. Special Tests and Inspections: Owner will engage a qualified testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner, and as follows:
  1. Structural Tests and Inspections of the completed work in-place paid for by the Owner:
    - a. Soils under foundations and slabs-on-grade.
    - b. Concrete Materials.
    - c. Structural Steel, and metal deck.
    - d. Miscellaneous Metal Stairs.
    - e. Light Gage Metal Framing.

#### PART 2 - PRODUCTS (Not Used)

#### PART 3 - EXECUTION

##### 3.1 TEST AND INSPECTION LOG

- A. Prepare a record of tests and inspections. Include the following:
  1. Date test or inspection was conducted.
  2. Description of the Work tested or inspected.
  3. Date test or inspection results were transmitted to Architect.
  4. Identification of testing agency or special inspector conducting test or inspection.

- B. Maintain log at Project site. Post changes and modifications as they occur. Provide access to test and inspection log for Architect's, and Owner's Project Manager's, reference during normal working hours.

### 3.2 REPAIR AND PROTECTION

- A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
  - 1. Comply with the Contract Document requirements for Division 01 Section "Cutting and Patching."
- B. Protect construction exposed by or for quality-control service activities.
- C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 014000

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

Section 01 41 00  
REGULATORY REQUIREMENTS

**PART 1 - GENERAL**

1.1 SUMMARY

- A. This Section consists of:
1. Applicable codes and regulations.
  2. Trade union jurisdictions.
  3. Wage rate compliance.

1.2 DEFINITIONS

- A. Regulations include laws, ordinances, statutes and lawful orders issued by authorities having jurisdiction, and rules, conventions and agreements within the construction industry that control performance of the Work, whether lawfully imposed by authorities having jurisdiction or not.

1.3 APPLICABLE CODES AND REGULATIONS

- A. All work shall be performed in accordance with the latest version, by DATE OF ISSUE for Contract Documents, current on date of Owner-Contractor Agreement, except as indicated otherwise, of all applicable codes including the following:
1. 2015 International Building Code (IBC) with Massachusetts Building Code, Ninth Edition amendments (780 CMR).
  2. 2015 International Energy Conservation Code with Massachusetts Building Code amendments, (Effective August 12, 2016 under the 780 CMR, Eighth Edition).
  3. 2015 International Mechanical Code (IMC).
  4. Massachusetts Electrical Code (2017 National Electrical Code [NFPA 70, 2017 edition], with Massachusetts modifications from 527 CMR 12.00).
  5. Massachusetts Fuel, Gas, and Plumbing Code (2002 National Fuel Gas Code [ANSI Z223.1-NFPA 54], with Massachusetts modifications from 248 CMR 5.00).
  6. Massachusetts Comprehensive Fire Safety Code (527 CMR) [2012 NFPA 1 as amended], effective January 1, 2015, as amended through November 4, 2016 and MGL Chapter 148.
  7. Commonwealth of Massachusetts Regulation 521 CMR: *Architectural Access Board*.
  8. Commonwealth of Massachusetts Regulation CMR 38:00 - *Regulations For Governing School Building Assistance Act*, Chapter 645, 603.
  9. Massachusetts Board of Elevator Regulations (524 CMR).
  10. Commonwealth of Massachusetts, Department of Public Works. "STANDARD SPECIFICATIONS FOR HIGHWAYS AND BRIDGES CONSTRUCTION".
  11. Commonwealth of Massachusetts Wetlands Protection Act.
  12. City of [???] Zoning Regulations / Ordinance , as amended.

13. National Fire Protection Association: NFPA 101 - LIFE SAFETY CODE, 2012 Edition.
14. National Fire Protection Association: NFPA 241 – *Standard for Safeguarding Building Construction And Demolition Operations*, 2013 Edition.
15. United States Occupational Safety and Health Administration (OSHA): Standard N°. 29-CFR-1926.59 - HAZARD COMMUNICATION STANDARD.
16. United States Department of Justice, N° 28 CFR Part 36 - AMERICANS WITH DISABILITIES ACT, (Public Law 101-336).

- B. Publication Dates: Where the date of issue of a code or regulation is not specified, comply with the standard in effect as of date of Contract Documents, or as otherwise required by authorities having jurisdiction.

#### 1.4 TRADE UNION JURISDICTIONS

- A. Maintain current information on jurisdictional matters, regulations, actions and pending actions; and administer/supervise performance of Work in a manner which will minimize possibility of disputes, conflicts, delays, claims or losses.

#### 1.5 WAGE RATE COMPLIANCE

- A. The General Contractor is responsible to ensure that the rate per hour to be paid to mechanics, apprentices, teamsters, laborers and other workers employed on the Work shall not be less than the approved wage rates applicable to this project. A legible copy of the approved rates, along with equal opportunity requirements, shall be posted on a weatherproof bulletin board outside the field office and be clearly visible for review by all workers.

#### **PART 2 - PRODUCTS** (Not Used)

#### **PART 3 - EXECUTION** (Not Used)

End of Section

---

Section 01 41 17  
UTILITIES NOTIFICATION

**PART 1 – GENERAL**

**1.1 GENERAL PROVISIONS**

- A. Comply with all regulations and laws concerning excavation, demolition, or explosive work and be advised of utility notification requirements under Chapter 82, Section 40 of the Massachusetts General Laws.

**1.2 ADMINISTRATIVE AUTHORITY**

- A. Notification of utilities within the Commonwealth is performed through the Utilities Underground Plant Damage Prevention System, commonly referred to as “Dig Safe”.

**1.3 REGULATORY REQUIREMENTS**

- A. Construction Managers must notify “Dig Safe” by telephone before performing any earth moving operations including: digging, trenching, boring, site demolition, excavation, backfilling, grading, or explosive work in all public ways and private property.
- B. This notification must be made at least 72 hours (excluding weekends and holidays) prior to the Work described above, but not more than 30 calendar days before commencement of the contemplated Work. Notification shall occur between 6:00 AM to 6:00 PM local time from Monday to Friday, except in cases of emergency.
  - 1. The toll free phone number is: **811**.
  - 2. Provide the following information:
    - a. Municipality.
    - b. Location of work.
    - c. Intersecting street.
    - d. Type of work.
    - e. Starting date and time of work.
    - f. Name and title of caller.
    - g. Phone number of caller.
    - h. Best time for “Dig Safe” to return calls.
    - i. Company name of Construction Manager.
    - j. Company name of Trade Construction Manager or subcontractor performing subgrade work.
- C. Member utilities of the Utilities Underground Plant Damage Prevention System are required to respond to the notice within 72 hours from the time said notice is received by designating at the locus the location of pipes, mains, wires, or conduits.

1. Locations of underground utilities will be marked by spray paint or stakes. Marks will be color coded with additional descriptions of letters and arrows as required.
  - D. Do not commence work until "Dig Safe" has been properly notified and has responded as described above.
  - E. Subsequently notify "Dig Safe" of unanticipated additional blasting required after the initial notification to "Dig Safe" has been made. Do not perform the additional blasting work in less than 4 hours following the subsequent notification.
- 1.4 PROTECTION
- A. The Construction Manager is fully responsible for protection of the utility location markings, wherever these occur, on or off-site.
  - B. Perform Work in such a manner, and with reasonable precautions taken to avoid damage to utilities under the surface in said areas of work. Immediately notify any known or suspected damage to underground utilities to the owner of such utilities.

**PART 2 - PRODUCTS** (not used)

**PART 3 - EXECUTION** (not used)

End of Section

## **SECTION 014200 - REFERENCES**

### **A. GENERAL**

#### **1.2 RELATED DOCUMENTS**

- A. Retain or delete this article in all Sections of Project Manual.
- B. Attention is directed to the Contract and General Conditions and all Sections within Division 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.

#### **1.3 DEFINITIONS**

- A. Terms defined in this article are not defined in the General Conditions. See Evaluations for discussion on whether definitions are necessary and whether they should be included here or in the Supplementary Conditions.
- B. Retain this article or selected paragraphs in article if definitions below are not included elsewhere in Project Manual.
- C. General: Basic Contract definitions are included in the Conditions of the Contract.
- D. When using terms such as those in first two paragraphs below, do not extend Architect's responsibility into Contractor's area of means, methods, and techniques of construction. See Evaluations.
- E. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
- F. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."
- G. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
- H. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- I. Avoid revising first three paragraphs below because of widespread acceptance and understanding of these terms as defined.

- J. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- K. "Install": Operations at Project site including unloading, temporarily storing, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.
- L. Installer: An Installer is the Contractor or another entity engaged by the Contractor, either as an employee, subcontractor, or contractor of lower tier, to perform a particular construction activity, including installation, erection, application, and similar operations. Installers are required to be experienced in the operations they are engaged to perform.
  - 1. The term experienced, when used with the term Installer, means having a minimum of five (5) previous projects similar in size and scope to this Project, being familiar with the special requirements indicated, and having complied with requirements of the authority having jurisdiction.
  - 2. Trades: Using terms such as carpentry is not intended to imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as carpenter. It also does not imply that requirements specified apply exclusively to tradespersons of the corresponding generic name.
  - 3. Assigning Specialists: Certain Sections of the Specifications require that specific construction activities shall be performed by specialists who are recognized experts in those operations. The specialists must be engaged for those activities, and their assignments are requirements over which the Contractor has no choice or option. However, the ultimate responsibility for fulfilling Contract requirements remains with the Contractor.
    - a. This requirement shall not be interpreted to conflict with enforcing building codes and similar regulations governing the Work. It is also not intended to interfere with local trade union jurisdictional settlements and similar conventions.
- M. "Provide": Furnish and install, complete and ready for the intended use.
- N. Generally retain paragraph below; revise to suit Project. See Evaluations.
- O. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.
- P. Testing Agencies: A testing agency is an independent entity engaged to perform specific inspections or tests, either at the Project site or elsewhere, and to report on and, if required, to interpret results of those inspections or tests.

#### 1.4 SPECIFICATION FORMAT AND CONTENT EXPLANATION

- A. Specification Format: These Specifications are organized into Divisions and Sections based on the Construction Specifications Institute's 33 Division format and MASTERFORMAT numbering system.
- B. Specification Content: This Specification uses certain conventions regarding the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations or circumstances. These conventions are explained as follows:
  - 1. Abbreviated Language: Language used in Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words that are implied, but not stated, shall be interpolated, as the sense requires. Singular words will be interpreted as plural and plural words interpreted as singular where applicable as the context of the Contract Documents indicates.
  - 2. Imperative and streamlined language is used generally in the Specifications. Requirements expressed in the imperative mood are to be performed by the Contractor. At certain locations in the Text, subjective language is used for clarity to describe responsibilities that must be fulfilled indirectly by the Contractor, or by others when so noted.
  - 3. The words "shall be" are implied wherever a colon (:) is used within a sentence or phrase.

## 1.5 INDUSTRY STANDARDS

- A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
- B. Retain first paragraph below unless Specifications are revised to insert dates (which is not recommended). Unreferenced standards are not applicable. Revise effective date of the standard established below to suit Project.
- C. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
- D. Retain paragraph below on projects where copies of standards are needed. A requirement to retain many standards on a project site could become expensive. See Evaluations.
- E. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.
- F. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

## 1.6 ABBREVIATIONS AND ACRONYMS

- A. Retain list of Federal agencies below if required. The Section Text in MASTERSPEC Sections is prepared assuming list is retained.

1.7 Federal Government Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. Names, telephone numbers, and Web sites are subject to change and are believed to be accurate and up-to-date as of the date of the Contract Documents.

#### 1.8 STATE GOVERNMENT CODES AND REGULATIONS:

- A. The Massachusetts State Building Code (780 CMR).
- B. The Fire Prevention Code (527 CMR).
- C. The Elevator Code (524 CMR).
- D. The Architectural Access Regulations (521 CMR).
- E. The Plumbing and Gas Code (248 CMR). and
- F. The Electrical Code (527 CMR).

#### 1.9 INDUSTRY STANDARDS

- A. Applicability of Standards: Except where the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
  - B. Publication Dates: Comply with the standards in effect as of the date of the Contract Documents.
  - C. Conflicting Requirements: Where compliance with two (2) or more standards is specified and where the standards may establish different or conflicting requirements for minimum quantities or quality levels, refer requirements that are different but apparently equal and other uncertainties to the Architect through the Owner's Project Manager for a decision before proceeding.
  - D. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of the requirements. Refer uncertainties to the Architect for a decision before proceeding.
- 
- 1.10 Copies of Standards: Each entity engaged in construction on the Project is required to be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.
  - 1.11 Where copies of standards are needed to perform a required construction activity, the Contractor shall obtain copies directly from the publication source.
  - 1.12 Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. Where such acronyms or abbreviations are used in the Specifications or other Contract Documents, they mean the recognized name of the trade association, standards generating organization, authority having jurisdiction, or other entity applicable to the context of the Text provision. Refer to the "Encyclopedia of Associations", published by Gale Research Co., available in most libraries.
  - 1.13 Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. The following acronyms or abbreviations, as referenced in Contract Documents, are defined to mean the associated names. Names and addresses

are subject to change and are believed, but not ensured, to be accurate and up to date as of the date of Contract Documents.

#### 1.14 GOVERNING REGULATIONS AND AUTHORITIES

- A. Copies of Regulations: Obtain copies of governing regulations and retain at the Project site to be available for reference by parties who have a reasonable need, if requested by the Architect.

#### 1.15 SUBMITTALS

- A. Permits, Licenses, and Certificates: For the Owner's records, submit through the Owner's Project Manager copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, and similar documents, correspondence, and records established in conjunction with compliance with standards and regulations bearing upon performance of the Work.

### PART 2 - PRODUCTS (Not Used)

**PART 3 - EXECUTION (Not Used)**

**END OF SECTION 014200**

Section 01 43 39  
MOCK-UPS

**PART 1 - GENERAL**

1.1 SUMMARY

- A. Mockup requirements. Mock-ups are required for, but not limited to the following:
  - 1. On-site exterior wall section sample panel. Mock up panel; will be subject to testing under Section 01 45 29 – TESTING LABORATORY SERVICES.
  - 2. Typical classroom mock-up.
  - 3. Additional site mock-ups as specified in individual sections.
- B. All mock-ups specified herein, under other Sections of the Specifications, and shown on drawings will be reviewed and approved by the Architect and Owner. Unaccepted mock-ups shall be replaced or reconstructed in part or in total and the extent of the replacement or reconstruction shall be at the discretion of the Architect and Owner. The Construction Manager shall carry forth mock-up replacement or reconstruction until Architect's acceptance is obtained. Mock-up costs, including as many replacements or reconstruction as necessary to gain Architect's acceptance, shall be included in the Contract Cost and Schedule.

1.2 RELATED REQUIREMENTS

- A. Section 01 81 13 - SUSTAINABLE DESIGN REQUIREMENTS: Special administrative and procedure requirements related to the Owner's *LEED v4, LEED for Building Design and Construction, LEED BD+C: Schools* rating system certificate goals of energy conservation and efficiency, indoor air quality, and natural resource efficiency.
- B. Section 01 60 00 - PRODUCT REQUIREMENTS: Listing of VOC requirements for adhesives, cleaning/maintenance materials, paints, coatings, and sealants.
- C. Section 01 74 19 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL: Procedural and administrative requirements for construction and demolition recycling.
- D. Section 01 45 00 - QUALITY CONTROL.
- E. Section 01 45 29 – TESTING LABORATORY SERVICES.
- F. Section 01 91 13 –COMMISSIONING REQUIREMENTS.
- G. Section 03 30 00 - CAST-IN-PLACE CONCRETE.
- H. Section 04 20 00 - UNIT MASONRY.
- I. Section 05 12 00 – STRUCTURAL STEEL.
- J. Section 05 40 00 - COLD-FORMED METAL FRAMING.
- K. Section 05 50 00 – METAL FABRICATIONS.
- L. Section 06 16 00 - SHEATHING.
- M. Section 07 21 00 - THERMAL INSULATION.

- N. Section 07 27 13 - MEMBRANE AIR BARRIERS.
- O. Section 07 42 43 - COMPOSITE WALL PANELS.
- P. Section 07 54 19 - POLYVINYL CHLORIDE (PVC) ROOFING
- Q. Section 07 62 00 - SHEET METAL FLASHING AND TRIM.
- R. Section 07 92 00 - JOINT SEALERS.
- S. Section 08 43 13 - ALUMINUM-FRAMED STOREFRONTS.
- T. Section 08 44 13 - GLAZED ALUMINUM CURTAIN WALLS
- U. Section 08 51 13 - ALUMINUM WINDOWS.

### 1.3 SUBMITTALS

- A. Submit the following under provisions of Section 01 33 00 - SUBMITTAL PROCEDURES:
  - 1. Submit shop drawing of mockup indicating sizes, finishes and method of construction and installation of each component

### 1.4 GENERAL

- A. Where requested by Architect, or as specified in individual specification sections, assemble and erect specified items, with specified attachment and anchorage devices, flashings, seals, and finishes. Remove mock-up assemblies prior to date of Final Inspection, or as directed.
- B. Mock-ups, when approved by the Architect, will be used as datum for comparison with the remainder of the Work for the purposes of acceptance or rejection. Maintain mockup throughout construction period until Substantial Completion or as otherwise directed by Architect.
  - 1. Finishes, colors and textures of components shall be as specified for each component and shall be selected by the Architect.
- C. Demolish and remove from site prior to requesting inspection for certification of Substantial Completion, all Mock-ups which are not permitted to remain as part of the finished work.

### 1.5 COORDINATION

- A. Coordinate work of trades and schedule elements to expedite the fabricating, furnishing, and installation of multiple component mock-ups specified herein, in other Sections of the Specifications, and as shown in the Contract Documents.

## PART 2 - PRODUCTS

### 2.1 EXTERIOR WALL SECTION MOCK-UP

- A. Mockup Unit: Shall consist of one full size facsimile exterior wall section, using specified products as noted below. Mock-up shall be size and configuration as indicated on the Drawings.

- 
1. General description: Mockup unit shall include exterior masonry construction, with light gage steel stud framing backup and sheathing assembly as well as concrete masonry unit backup. Mockup shall include all components specified and indicated which are typical to the exterior wall construction and additional components specified herein.
    - a. Fabricate mockup unit with face brick and metal backup panel as specified, with selected mortar and backup consisting of 8 inch metal studs, insulated metal wall panel backup with specified brick anchors.
      - 1) Provide additional metal stud framing and cross bracing required for construction of various components of the mockup panel.
      - 2) Provide concealed various wood blocking, edgings, nailers, curbs, and cants required for receipt of various finishes and surfacing materials.
    - b. Fabricate aluminum window unit with glazing.
    - c. Include into mockup assembly all flashing, joint sealers, and all finish trim and accessories necessary to show typical completed construction.
    - d. Mock up shall include typical roof construction and all associated components.
  2. Finishes, colors and textures of components shall be as specified for each component and shall be selected by the Architect.
    - a. Provide window unit with specified insulated glazing.
- B. Components to be included in the mockup include, but are not limited to:
1. Section 03 30 00 - CAST-IN-PLACE CONCRETE.
    - a. Provide a concrete foundation wall to a depth required to support wall mockup.
  2. Section 04 20 00 - UNIT MASONRY.
    - a. Provide type of brick and colored mortar specified, installed over insulated metal wall panel backup with specified anchorage devices.
    - b. Provide face brick in bond pattern, mortar color, and joint type to be used in the Work.
  3. Section 05 12 00 – STRUCTURAL STEEL.
    - a. Support framing and typical building framing for mock-up conditions.
  4. Section 05 40 00 - COLD-FORMED METAL FRAMING:
    - a. Provide cold formed metal stud framing with bracing for construction and support of the mockup panel.
  5. Section 05 50 00 – METAL FABRICATIONS.
    - a. Provide galvanized steel lintels for openings in the mockup panel.
  6. Section 06 16 00 - SHEATHING:
    - a. Install sheathing board, on both sides of metal stud framing, with taped joints and metal and membrane flashing.
  7. Section 07 21 00 - THERMAL INSULATION:
    - a. Provide mineral wool insulation over sheathing and masonry backup.
  8. Section 07 27 13 - MEMBRANE AIR BARRIERS:
-

- 
- a. Provide air barrier over sheathing and masonry back-up including typical flashing conditions and transitional tie-ins to windows, storefront and curtain wall.
  9. Section 07 42 43 –COMPOSITE WALL PANELS:
    - a. Install composite wall panel over metal stud framing, with membrane flashing.
  10. Section 07 54 19 - POLYVINYL CHLORIDE (PVC) ROOFING:
    - a. Provide standard roof construction with interfacing conditions at masonry wall construction including roof edge.
  11. Section 07 62 00 - SHEET METAL FLASHING AND TRIM:
    - a. Provide typical metal flashing built into masonry construction.
  12. Section 07 92 00 - JOINT SEALERS:
    - a. Provide joint sealant at perimeter of all components. Colors shall be selected by the Architect.
  13. Section 08 43 13 - ALUMINUM-FRAMED STOREFRONTS: Provide fixed glass type storefront assembly and door, matching indicated profiles and dimensions exactly.
    - a. Fabricate with removable stop for installation of glass.
    - b. Storefront to be enamel shop finished to match selected PVDF finish specified for aluminum windows, matching color and sheen.
    - c. Mock-up shall pass testing requirements specified in Section 01 45 29 – TESTING LABORATORY SERVICES before the Metal Window Trade Contractor shall be allowed to proceed with the work.
  14. Section 08 44 13 - GLAZED ALUMINUM CURTAIN WALLS: Provide aluminum curtain wall matching indicated profiles and dimensions exactly.
    - a. Fabricate with removable stop for installation of glass.
    - b. Curtain wall to be enamel shop finished to match selected PVDF finish specified for aluminum windows, matching color and sheen.
    - c. Mock-up shall pass testing requirements specified in Section 01 45 29 – TESTING LABORATORY SERVICES before the Metal Window Trade Contractor shall be allowed to proceed with the work.
  15. Section 08 51 13 - ALUMINUM WINDOWS: Provide fixed glass type aluminum windows, matching indicated window unit profiles and dimensions exactly.
    - a. Fabricate with removable stop for installation of glass.
    - b. Window to be enamel shop finished to match selected PVDF finish specified for aluminum windows, matching color and sheen.
    - c. Provide specified insulated glass into windows, storefront and curtain wall.
    - d. Mock-up shall pass testing requirements specified in Section 01 45 29 – TESTING LABORATORY SERVICES before the Metal Window Trade Contractor shall be allowed to proceed with the work.
-

2.2 TYPICAL CLASSROOM MOCK-UP

- A. Mockup Unit: Shall consist of one entire classroom with all materials, finishes and appurtenances in place including building systems. Mock-up shall be size and configuration as indicated on the Drawings.

**PART 3 - EXECUTION**

3.1 PREPARATION

- A. Construct mock-ups at locations indicated or, if not indicated, at locations directed by the Architect.
- B. Construct mockup in time to make product and/or assembly modifications without delaying production work.
- C. Construction of components on building correlating with mock-up wall shall not commence until mock-up wall has been fully accepted by Owner and Architect.

3.2 INSTALLATION

- A. Construct mockup to duplicate actual job conditions.
  - 1. Locate at an area on site as directed by the Architect.
  - 2. Provide foundations, bases, supports and braces adequate to make mockup stable and safe.
- B. Provide weather protection for materials in mockups that are not exposed to weather in intended service.

3.3 REMOVAL

- A. Retain mock-ups during construction as a standard for judging completed work until time designated by the Architect and the Owner,
  - 1. Completely demolish and remove mockups from the job site at time designated by Architect.
  - 2. Accepted mock-ups (which are specifically identified by the Architect to become part of the work) may be incorporated into the work provided they are not damaged during subsequent construction.

End of Section

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

Section 01 45 29  
TESTING LABORATORY SERVICES

**PART 1 - GENERAL**

1.1 SUMMARY

- A. This Section consists of the following:
  - 1. Quality assurance.
  - 2. Laboratory responsibilities.
  - 3. Laboratory reports.
  - 4. Limits on testing laboratory authority.
  - 5. Construction Manager responsibilities.
  - 6. Construction Manager submittals.
  - 7. Schedule of inspections and tests.
  - 8. Concrete in situ relative humidity, calcium chloride and acidity/alkalinity testing.

1.2 REFERENCES

- A. Comply with applicable requirements of the following standards and those others referenced in this Section, under the provisions of Section 01 42 00 - REFERENCES. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern.
  - 1. ANSI/ASTM D 3740 - Standard Practice for Minimum Requirements for Agencies Engaged in the Testing and/or Inspection of Soil and Rock
  - 2. ANSI/ASTM E 329 - Standard Specification for Agencies Engaged in the Testing and/or Inspection of Materials Used in Construction.
  - 3. ASTM F 1869 – Standard Test Method for Measuring Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
  - 4. ASTM F 2170 – Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using In-Situ Probes
  - 5. ASTM F 710 – Standard Practice for Preparing Concrete Floors and Other Monolithic Floors to Receive Resilient Flooring.

1.3 QUALITY ASSURANCE

- A. Comply with requirements of ANSI/ASTM D 3740 and ANSI/ASTM E 329.
- B. Laboratory: Authorized to operate in state in which Project is located.
- C. Laboratory staff: Maintain a full time specialist on staff to review services. Provide registered Engineer on staff for all review of services related to structural testing.
- D. Testing Equipment: Calibrated at reasonable intervals with devices of an accuracy traceable to either the National Bureau of Standards (NBS) Standards or accepted values of natural physical constraints.

#### 1.4 LABORATORY RESPONSIBILITIES

- A. Cooperate with Architect and Construction Manager in performance of services; provide qualified personnel promptly on notice.
  - 1. Attend preconstruction conferences and progress meetings, as requested.
- B. Acquaint Owner's Project Manager, Architect, and Construction Manager's superintendent with testing procedures and with all special conditions encountered at the site.
- C. Perform specified Inspection, sampling, and testing of products and construction methods in accordance with specified standards as specified in individual technical specification sections:
  - 1. Comply with specified standards, ASTM, ANSI, and other recognized authorities.
  - 2. Conduct and interpret the tests and state in each report whether the test specimens comply with the requirements, and specifically state any deviations therefrom.
  - 3. Obtain Construction Manager's written acknowledgment of each inspection, sampling, and test made. Test samples of mixes submitted by Construction Manager.
  - 4. Ascertain compliance of materials and mixes with requirements of Contract Documents.
- D. Promptly notify Architect and Construction Manager of irregularities, deficiencies, or non-conformance of Work or Products which are observed during performance of services.
- E. Promptly submit written report of each test and inspection with one copy each to Architect, Owner's Project Manager, Construction Manager, and one copy to Project Record Documents File.
- F. Perform additional inspections and tests required by Architect/Engineer.

#### 1.5 LABORATORY REPORTS

- A. After each test, promptly distribute directly from the testing laboratory, copies of laboratory report to:
  - 1. Owner's Project Manager.
  - 2. Architect's office.
  - 3. Consulting engineer's office.
  - 4. Construction Manager's office.
  - 5. Municipal Inspectional Services Department, if required.
- B. Include in report the following information:
  - 1. Date issued,
  - 2. Project title and number,
  - 3. Testing laboratory name, address, and telephone number.
  - 4. Name and signature of laboratory inspector.

5. Date and time of sampling,
6. Record of temperature and weather conditions (as appropriate to test).
7. Identification of product and Specifications Section,
8. Location of sample or test in the Project.
9. Type of inspection or test.
10. Results of tests and compliance with Contract Documents.
11. Interpretation of test results, when requested by Architect.
12. Observations regarding compliance with Contract Documents

#### 1.6 LIMITS ON TESTING LABORATORY AUTHORITY

- A. Laboratory may not release, revoke, alter, or enlarge on requirements of Contract Documents.
- B. Laboratory may not approve or accept any portion of Work.
- C. Laboratory may not assume any duties for Construction Manager.
- D. Laboratory has no authority to stop the Work.

#### 1.7 CONSTRUCTION MANAGER RESPONSIBILITIES

- A. Coordinate and cooperate with laboratory personnel, provide access to Work, and to manufacturer's facilities.
  1. Monitor each inspection, sampling, and test.
  2. Provide Laboratory or Agency with written -acknowledgment of each Inspection, sampling, and test.
  3. Within 24 hours notify Architect and Owner in writing of reasons for not acknowledging Laboratory results.
- B. Secure and deliver to the Laboratory or designated location, adequate quantities of representational samples of materials proposed to be used and which require testing, along with proposed mix designs.
- C. Furnish incidental labor and facilities:
  1. To provide access to Work to be tested.
  2. To obtain and handle samples at the Project site or at the source of the Product to be tested.
  3. To facilitate inspections and tests.
  4. For storage and curing of test samples.
- D. Furnish verification of materials and equipment compliance with Contract Documents.
- E. Notify Architect and laboratory 24 hours prior to expected time for operations requiring inspection and testing services.
- F. Identify materials to be tested or inspected by Testing Laboratory or Agency.

- G. After determination of need for testing or inspecting by Owner, notify Laboratory sufficiently in advance, minimum five days, of operations to allow for its assignment of personnel and scheduling of tests.
  - 1. When tests or inspections cannot be performed after such notice, reimburse Owner for laboratory personnel and travel expenses incurred due to Construction Managers negligence.
- H. Make arrangements with laboratory and pay for additional samples and tests required for the following conditions:
  - 1. Initial testing indicates Work does not comply with Contract Documents.
  - 2. Construction Manager requested testing for additional testing and laboratory services beyond specified requirements.

#### 1.8 CONDUCT OF INSPECTIONS AND TESTS

- A. The Construction Manager shall notify the Owner's Project Manager, Architect, and Testing Laboratory a minimum of 72 hours before the performance of work to permit the proper conduct of Owner authorized inspections and tests.
- B. Representatives of Testing Laboratory will inspect the manufacture, assembly, and placement of materials as required and as authorized by the Owner, and report their findings to the Architect, Owner's Project Manager, and Construction Manager.
- C. Work shall be checked as it progresses, but failure to detect any defective work or materials shall in no way prevent later rejection when such defect is discovered nor shall it obligate the Owner to accept such work.

#### 1.9 SCHEDULE OF TESTING AND LABORATORIES BY OWNER

- A. Except as otherwise specified, Owner will appoint, employ, and pay services of independent firm(s) to perform inspection and testing and other services specified herein, in individual specification Sections, and as additionally required by the Architect.
- B. Requirements for testing, observations, and inspections are described in individual specification sections; the schedule provided below is not intended to completely describe all of the inspection and testing Work required for this Contract, and is only furnished as a guide.
  - 1. Section 03 30 00 - Cast-in-Place Concrete: Concrete test cylinders
  - 2. Section 04 20 00 - Unit Masonry: One day per week observation of masonry installation. grout, mortar and prism testing.
    - a. Three cylinders tested for compressive strength at 10 days; ASTM C 91 test.
    - b. Obtain sample face brick units (minimum 4) and test for conformance to ASTM C 67.
  - 3. Section 05 12 00 - Structural Steel Framing: Testing of welds of field and shop fabricated components. Testing of bolting.
    - a. Bolt torque testing.
    - b. Welding X-ray and ultrasonic tests as specified.

- c. Coating thickness of primer coats.
  - 4. Section 05 31 00 - Steel Decking: Periodic inspection of steel decking installation prior to concrete placement.
  - 5. Section 07 92 00 - Joint Sealants: Chemical analysis; adhesive strength; compatibility with adjacent materials; elasticity.
  - 6. Section 09 91 00 - Painting: Chemical analysis; coating thickness
- C. Concrete slabs and floors: Relative Humidity, Moisture Vapor Emission and acidity/alkalinity (pH) Testing:
- 1. Owner will employ and pay for services of an independent testing laboratory to perform relative humidity, moisture vapor emission, and pH tests on concrete slabs as follows. The test shall be witnessed by the Construction Manager, flooring Trade Contractors, subcontractors and Owner's Project Manager.
    - a. Relative Humidity, Moisture Vapor Emission and pH Testing on all concrete slabs over-which a finished floor is to be installed. This includes, but is not limited to:
      - 1) Wood flooring of all types.
      - 2) Resilient flooring of all types.
      - 3) Resinous flooring and seamless flooring of all types.
      - 4) Carpet tile.
      - 5) Concrete sealers.
    - b. Perform moisture and pH tests on all concrete floors over-which stone flooring is to be applied.
  - 2. Requirements: As specified under Part 3 of this Section.
    - a. Submit 1 copy of test data to the installers of all flooring materials or coating materials scheduled to be installed.
    - b. Provide additional testing in the event test results indicate higher moisture content than recommended by the flooring material and coating material manufacturers for the installation of their products. Perform such additional testing, at no additional cost to the Owner, after procedures have been performed to reduce moisture content to ratings acceptable to the various flooring and coating manufacturers.
- D. Special Tests and Inspections: Owner will engage a testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner.
- 1. Testing agency will notify Architect, Owner's Project Manager, and Construction Manager promptly of irregularities and deficiencies observed in the Work during performance of its services.
  - 2. Testing agency will submit a certified written report of each test, inspection, and similar quality-control service to Architect, through Construction Manager, with copy to Owner's Project Manager and to authorities having jurisdiction.
  - 3. Testing agency will submit a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
  - 4. Testing agency will interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

5. Testing agency will retest and re-inspect corrected work.

1.10 SCHEDULE OF TESTING AND LABORATORIES BY CONSTRUCTION MANAGER

- A. Construction Manager shall employ and pay for services of an approved independent testing laboratory to perform inspection and testing specified under this Article and as additionally in individual specification sections
  - 1. Submit to Architect/Engineer a minimum of three independent testing laboratories for each type of testing specified by individual specification sections and those required by the referenced applicable codes, regulations and standards.
  - 2. Employment of testing laboratory shall in no way relieve Construction Manager of obligation to perform work in accordance with requirements of Contract Documents.
- B. Earthwork: Lab tests to determine suitability of all fill materials shall be paid for by Construction Manager.
  - 1. Owner reserves the right to retain and pay for his own testing for checking purposes
- C. Concrete Paving and General Concrete Work: Concrete mix design testing shall be paid for by Construction Manager. Owner reserves the right to retain and pay for his own testing for checking purposes.
- D. Moisture content testing of interior and exterior wood prior to application of field painted coatings.
- E. Local Authority Inspections: The Construction Manager is also responsible for coordinating and cooperating with local requirements for inspections by local Authorities.
- F. Massachusetts Energy Code Witness Testing: The Construction Manager shall engage the services of Massachusetts registered professional mechanical and electrical engineers who shall perform witness testing of all HVAC, lighting and power distribution systems in accordance with the requirements of the Massachusetts Energy Code. The registered professional engineer shall prepare a final performance acceptance report in accordance with the code requirements and in a form acceptable to the local code official. The actual testing shall be performed by the Construction Manager, his designated Trade Contractors or authorized manufacturers' representatives. All costs associated with the testing, witnessing of the testing and preparation of reports shall be part of the base contract bid.

1.11 SCHEDULE OF TESTING AND LABORATORIES BY TRADE CONTRACTORS

- A. Respective Trade Contractor shall employ and pay for services of an approved independent testing laboratory to perform inspection and testing specified under this Article and as additionally in individual specification sections
  - 1. Submit to Architect a minimum of three independent testing laboratories for each type of testing specified by individual specification sections and those required by the referenced applicable codes, regulations and standards.

2. Employment of testing laboratory shall in no way relieve Construction Manager of obligations to perform work in accordance with requirements of Contract Documents.
- B. Aluminum framed storefront, glazed aluminum curtain wall and aluminum windows:
1. Testing shall be performed and paid for by the Metal Window Trade Contractor and witnessed by the Construction Manager, Owner's Project Manager and Commissioning Agent.
  2. Testing of mock-ups and installed work subject to the following requirements:
    - a. Independent inspection and testing agency engaged on the project shall be authorized by authorities having jurisdiction to operate in the Commonwealth of Massachusetts and as acceptable to the Owner, Construction Manager, Architect and Commissioning Agent.
      - 1) Testing agency will notify Architect, Construction Manager, Owner's Project Manager and Trade Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
      - 2) Testing agency will submit a certified written report of each test, inspection, and similar quality control service to Architect with copy to Construction Manager, Owner's Project Manager and Trade Contractor.
      - 3) Testing agency will submit a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
      - 4) Testing agency will interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.
      - 5) Testing agency will retest and re-inspect corrected work.
    - b. In-place testing of specified limits of air infiltration and water resistance according to following:
      - 1) AAMA 501.1 - Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure.
      - 2) AAMA 502 -Voluntary Specification for Field Testing of Newly Installed Fenestration Products.
      - 3) ASTM E 783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors
      - 4) ASTM E 1105 – Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.
    - c. Failed tests will result in additional testing of the failed specimens and an additional specimen at the cost of the Trade Contractor. Testing will be concluded only when satisfactory results are achieved. Any required re-testing that is a result of deficient installation shall not be considered a justified reason for a claim of delay or for a time extension by the Construction Manager or Trade Contractor.
    - d. Schedule of testing:
      - 1) Mockup wall (refer to drawings):
        - a) Window with precast concrete head condition; qty. = 1

- b) Window with profiled metal panel head condition; qty. = 1
  - c) Curtain wall with composite metal panel head condition; qty. = 1
  - d) Storefront with precast head condition; qty. = 1
- 2) In-place building (actual locations to be selected by the architect):
  - a) Window with precast concrete head condition; qty. = 2
  - b) Window with profiled metal panel head condition; qty. = 2
  - c) Curtain wall with profiled metal panel head condition; qty. = 1
  - d) Curtain wall with composite metal panel head condition; qty. = 1
  - e) Storefront with profiled metal panel head condition; qty. = 1
  - f) Storefront with composite metal panel head condition; qty. = 1
  - g) Storefront with precast concrete head condition; qty. = 1
- C. Fire Protection System: At least the following tests shall be performed. Conform to requirements specified in individual Division 21 Specification Sections. The test shall be performed and paid for by the Trade Contractor and witnessed by the Construction Manager, Owner's Project Manager and authorities having jurisdiction:
  - 1. Fire protection system flushed and pressure tested.
- D. Plumbing: At least the following tests shall be performed. Conform to requirements specified in individual Division 22 Specification Sections. The test shall be performed and paid for by the Trade Contractor and witnessed by the Construction Manager, Owner's Project Manager and authorities having jurisdiction:
  - 1. Water supply piping hydrostatic pressure test.
  - 2. Sanitary piping test before fixture installation: Cap pipes and fill to highest point in system.
  - 3. Plumbing fixture operation.
- E. HVAC Testing: All HVAC work shall be tested by an independent testing and balancing agency, approved by Owner. Conform to requirements specified in individual Division 23 Specification Sections. The tests shall be performed and paid for by the Trade Contractor and witnessed by the Construction Manager, Owner's Project Manager and authorities having jurisdiction. Adjustments shall be made by the Trade Contractors directed by the Owner. At least the following tests shall be performed:
  - 1. Piping hydrostatic tests.
  - 2. Air and water balancing.
  - 3. Thermostat control monitoring and testing.
  - 4. Boiler efficiency testing.
  - 5. Energy Management System operation.
- F. Electrical Power System Testing: At least the following tests shall be performed. Conform to requirements specified in individual Division 26 Specification Sections. The tests shall be performed and paid for by the Trade Contractor and witnessed by the Construction Manager, Owner's Project Manager and authorities having jurisdiction:

1. Polarity tests.
  2. Operation of all circuits.
  3. Testing of emergency system.
  4. Security systems.
  5. Generation system.
  6. Grounding systems.
  7. Voice/Video/Data networking testing.
- G. Electrical Lighting System Testing: Conform to requirements specified in individual Division 26 Specification Sections. At least the following tests shall be performed and paid for by the Trade Contractor:
1. Operation of every component of entire system.
- H. Fire Alarm System Testing: At least the following tests will be performed. Conform to requirements specified in individual Division 26 Specification Sections. The test shall be performed and paid for by the Trade Contractor and witnessed by the Construction Manager, and Owner's Project Manager:
1. All smoke and heat detectors.
  2. Proper operation as required by authorities having jurisdiction.
- I. Where no testing requirements are described but the Owner or Architect/Engineer decides that testing is required, testing will be performed under current pertinent standards for testing.

#### 1.12 FOLLOW-UP AND CORRECTIVE ACTION

- A. The Construction Manager and the Owner will note the test record on the Testing Log to acknowledge test procedures and results. If follow-up or corrective action is needed, the Construction Manager shall submit to the Owner two written copies of proposed follow-up or corrective plans and obtain the Owner's written approval before proceeding.
1. Cost of Testing: If tests indicate that materials or work do not comply with requirements, the Construction Manager shall pay for all retesting, and shall remove and replace non-complying work at no additional cost to the Owner.

### **PART 2 - PRODUCTS (Not Used)**

### **PART 3 - EXECUTION**

#### 3.1 CONCRETE IN SITU RELATIVE HUMIDITY, CALCIUM CHLORIDE AND ACIDITY/ALKALINITY TESTING

- A. Scope:
1. Provide in situ concrete relative humidity and surface pH testing to all concrete slabs specified to be covered with floor coverings or resinous coatings. Includes concrete placed as part of this Work which occurs below grade, above grade (suspended slabs), and slabs on grade.
    - a. Existing building suspended slabs may be excluded from this requirement.

- B. Scheduling:
1. Testing shall take place after allowing concrete to dry for a minimum of 90 days. Testing to be scheduled no less than one, nor more than three weeks prior to scheduled flooring installation.
    - a. DO NOT conduct testing unless the slab environment is identical to that in which the finished flooring is to be installed.
  2. In the event new flooring is to be installed over existing resilient flooring, remove the portion of the existing flooring and adhesive directly under the area where testing will be conducted. Patch flooring to match existing construction after completion of testing.
- C. Test result submittals:
1. Report all test results in chart form listing test dates, time, depth of test well, in situ temperature, relative humidity, moisture vapor and pH levels.
  2. List test locations on chart and show same on marked up Floor Plan Drawings.
  3. Submit results in duplicate. Deliver copies directly to Architect, Owner's Project Representative and Construction Manager.
- D. Testing equipment: shall be equal to the following
1. For relative humidity testing:
    - a. Digital Meter and Calibrated Humidity and Temperature probe kit as manufactured by Vaisala Inc. (Boston Office) 10D Gill Street, Woburn, MA, 01801 (telephone 781-933-4500).
      - 1) Minimum 2 point probe calibration.
  2. For calcium chloride testing:
    - a. Anhydrous calcium chloride testing in accordance with Rubber Manufacturer's Association (RMA) Test requirements.
    - b. Test kits: Vaprecision, inc. 2941 West MacArthur Boulevard, Suite 135. Santa Ana, CA 92704 (telephone 800-449-6194).
  3. For pH testing:
    - a. pH test paper by Micro Essential Laboratory, Inc., P.O. Box 100824 4224 Avenue "H", Brooklyn, NY 11210, (telephone 718-338-3618).
    - b. Distilled or de ionized water.
- E. Testing Procedures Quantification of Relative Humidity
1. The test site should be maintained at the same temperature and humidity conditions as those anticipated during normal occupancy. These temperature and humidity levels should be maintained for 48 hours prior and during test period. If meeting this criteria is not possible, then minimum conditions should be 75 degrees F (plus or minus 10 degrees F), and 50 percent (plus or minus 10 percent) relative humidity. When a building is not under HVAC control, a recording hygrometer or data logger shall be in place recording conditions during the test period. A transcript of this information must be included with the test report.

2. The number of In situ relative humidity test sites is determined by the square footage of the facility. The minimum number of tests to be placed is equal to 3 in the first 1,000 square feet and 1 per each additional 1,000 square feet.
  3. Drill test holes utilizing a roto hammer drill. Hole diameter shall not exceed outside diameter of the insertable test sleeve by more than 0.04 inch. Drilling operation must be dry. Determine the thickness of the concrete slab from Construction Documents. Depths of test holes shall be as follows:
    - a. For elevated slabs (not poured in pans): Drill test holes to a depth equal to 20 percent of the concrete thickness.
    - b. For slabs on grade and elevated slabs in pans: Drill test holes to a depth equal to 40 percent of the concrete thickness.
  4. Vacuum all concrete dust from test hole.
  5. Insert a hole liner, or sleeve, to the full depth of test hole, assuring that the liner is capped or plugged at the end protruding from the concrete surface.
  6. Permit the test site to acclimate, or equilibrate, for 72 hours prior to taking relative humidity readings.
  7. Remove the sleeve plug and place a probe into the sleeve assuring that it reaches the bottom of the test hole.
  8. Allow the probe to sit in the test sleeve for 30 minutes before taking readings.
  9. Read and record temperature and relative humidity at the test site.
- F. Testing Procedures - Quantification of Concrete Moisture Vapor Emission through Calcium Chloride Testing.
1. The test site should be maintained at the same temperature and humidity conditions as those anticipated during normal occupancy. These temperature and humidity levels should be maintained for 48 hours prior and during test period. If meeting this criteria is not possible, then minimum conditions should be 75 degrees F (plus or minus 10 degrees F) and 50 percent relative humidity (plus or minus 10 percent). When a building is not under HVAC control, a recording hygrometer or data logger shall be in place recording conditions during the test period. A transcript of this information must be included with the test report.
  2. The number of vapor emission test sites is determined by the square footage of the facility. The minimum number of tests to be placed is equal to 3 In the first 1,000 square feet and 1 per each additional 1,000 square feet.
  3. Tests sites are to be cleaned of all adhesive residue, curing compounds, paints, sealers, floor coverings, and similar materials. 24 hours prior to the placement of test kits.
  4. Weigh test dish on site prior to start of test. Scale must report weight to 0.1 grams. Record weight and start time.
  5. Expose Calcium Chloride and set dish on concrete surface.
  6. Install test containment dome and allow test to proceed for 60 to 72 hours.
  7. Retrieve test dish by carefully cutting through containment dome. Close and reseal test dish.
  8. Weigh test dish on site recording weight and stop time.
  9. Calculate and report results as pounds of emission per 1,000 square feet per 24 hours."

- G. Testing Procedures Quantification of Acidity/Alkalinity (pH) Level
1. At or near the relative humidity test site and each vapor emission (calcium chloride) test site, perform pH test.
    - a. At each testing site, lay down a loose 2 foot by 2 foot sheet of rubber flooring or non perforated polyethelene sheet backed by plywood. Leave in place for 48 hours.
    - b. Remove rubber sheet/polyethelene and place several drops of distilled or de ionized water onto the concrete surface to form a puddle approximately 1 inches in diameter.
    - c. Allow the water to set for approximately 60 seconds.
    - d. Dip the pH paper into the water and remove immediately, compare color to chart provided by paper supplier to determine pH reading
  2. Record and report results.
- H. Testing Procedures:
1. Initial testing: Provide 3 tests for the first 1,000 square feet.
  2. Add one test for each additional 1,000 square feet.
  3. Concrete surface area to be tested shall be completely clean. Remove all adhesives, residue, debris and sealing compounds. Remove all dust by vacuum or other methods. Do not use chemicals of any kind to clean concrete.
  4. Perform moisture tests in strict accordance with the kit manufacturer's Instructions. Moisture tests shall remain undisturbed for 60 to 72 hours.
  5. Immediately after moisture test has been removed from test area, conduct pH test in area previously covered by plastic dome of moisture test kit.
  6. After completion of tests submit 2 copies of test data to the Architect. Submit a copy of the test data to all installers of flooring materials and resinous flooring materials scheduled to be installed.
  7. Provide additional testing in the event test results indicate higher moisture content than recommended by the flooring material and coating material manufacturers for the installation of their products. Perform such additional testing, at no additional cost to the Owner, after procedures have been performed to reduce moisture content to ratings acceptable to the various flooring and coating manufacturers.

End of Section

**Program of Structural Tests and Inspections**  
For compliance with Chapter 17 of the 9<sup>th</sup> Edition of the  
Massachusetts State Building Code

Project: South High Community School Site Enabling Package  
Location: Worcester, MA  
Owner: Worcester School District  
Architect of Record: Lamoureux Pagano and Associates  
Structural Engineer of Record (SER): Bolton & DiMartino, Inc.

This program of structural tests and inspections is submitted as a condition for issuance of the building permit in accordance with 780 CMR 1705.0 of the 9<sup>th</sup> edition of the Massachusetts State Building Code.

The Structural Engineer of Record (SER) shall review records of all inspections and tests. These tests and inspections shall be furnished to the Building Official, Owner, and Architect of Record by the relevant agencies. The SER shall review inspections and testing reports and shall give written notice of non-conforming work to the Contractor for correction and the Owner's representative. The Program of Structural Tests and Inspections does not relieve the Contractor of his/her responsibility and obligations to comply with the Contract Documents. Furthermore, the results of the Program of Structural Tests and Inspections do not relieve the Contractor of his/her responsibility.

A final report documenting completion of all the required Structural Tests and Inspections and correction of any of the discrepancies noted on interim reports will be submitted by the Structural Engineer of Record to the Building Official, Owner, and Architect of Record prior to the issuance of a certificate of use and occupancy.

Job site safety is solely the responsibility of the Contractor and not the part of Structural Tests and Inspections. Material and activities to be inspected do not include the Contractor's equipment or the means, methods, and procedures used to erect or install the materials or assemblies listed.

### Schedule of Structural Tests and Inspections

#### South High Community School Worcester, Massachusetts

The following categories of Structural Tests and Inspections are included in the program for structural tests and inspections for this project. The specific tests and inspections required for each category are listed on the page noted opposite the category.

|  |                    |
|--|--------------------|
| <b><u>Division 31</u></b>                | <b><u>Page</u></b> |
| • Controlled gravel fill (prepared fill) | <u>3</u>           |
| • In-situ bearing strata for footings    | <u>3</u>           |
| <b><u>Division 3</u></b>                 |                    |
| • Cast-in-place Concrete                 | <u>4</u>           |

The following categories are excluded from this Program of Structural Tests and Inspections, since they are designed by other structural engineers not under the aegis of the SER and the SER was not retained to provide performance specifications for their design. These other structural engineers must be assigned by the owner, architect, or construction contractor, as applicable, to be Special SER's for their respective designs and to provide a program of structural tests and inspections for their respective designs.

- Not Applicable

The following firms, agencies, or individuals (hereinafter referred to collectively as agents) except for the Geotechnical Engineer, will perform the tests and inspections under the direction of the SER. (The Geotechnical Engineer is responsible for directing the testing and inspection of controlled structural fill, in situ bearing stratum for footings.)

|                     |  |
|---------------------|--|
| <u>Abbreviation</u> | <u>Agent</u>                                 |
| SER                 | Structural Engineer of Record (Listed above) |
| OIAF                | Owner's Inspection Agency - Field            |
| OIAP                | Owner's Inspection Agency - Plant            |
| GE                  | Geotechnical Engineer                        |
| FQP                 | Fabricator's Quality Control Program         |
| CQP                 | Contractor's Quality Control Program         |
| NR                  | Not Required                                 |
| NA                  | Not Applicable                               |

**Controlled Gravel Fill (Prepared Fill) –31 20 00**

| Item   | Agent             | Scope  |
|--|-------------------|--|
| 1. Fill Material.  | GE<br>OIAF        | Test material for conformance to the specifications. Perform laboratory compaction tests in accordance with the specifications to determine optimum water content and maximum dry density (GE, OIAF) |
| 2. Installation of controlled gravel fill (780 CMR 1705.9.1 and 2) | GE<br>OIAF        | Provide full-time inspection of the installation in accordance with the specifications and 780 CMR 1705.9.1 and 2 (GE, OIAF)   |
| 3. Density of Fill (780 CMR 1705.9.3)                              | SER<br>GE<br>OIAF | Perform field density tests of the in-place fill in accordance with the specifications and 780 CMR 1705.9.3 (GE, OIAF). Review test reports for conformance to the construction documents (SER, GE). |

**In-Situ Bearing Strata for Footings – 31 20 00**

| Item                             | Agent      | Scope  |
|----------------------------------|------------|--|
| 1. Bearing strata for footings.  | GE         | Inspect strata for conformance to the structural drawings, specifications, and/or geotechnical report (GE).  |
| 2. Bearing surfaces of footings. | GE<br>OIAF | Inspect bearing surfaces for conformance to the requirements of the structural drawings, specifications, and/or geotechnical report. Observe field conditions for cold weather protection, as required (GE, OIAF). |

**Cast-in-Place Concrete – 03 30 00**

| <b>Item</b>                         | <b>Agent</b> | <b>Scope</b>  |
|-------------------------------------|--------------|---|
| 1. Mix Design.                      | SER<br>OIAF  | Review mix designs for conformance to specifications (SER). Perform plant inspection for use of proper mix proportions and mix techniques (OIAF).   |
| 2. Materials Certification          | OIAF         | Review for conformance to construction documents (OIAF).  |
| 3. Batching Plant.                  | SER<br>OIAF  | Review plant certificates and quality control procedures. Perform in-plant inspections as required to insure concrete quality (OIAF). Review OIAF reports (SER).  |
| 4. Reinforcing Installation.        | SER<br>OIAF  | Inspect reinforcing for size, quantity, condition, and placement of reinforcing steel and embedded items for conformance to the contract documents and approved shop drawings (SER, OIAF).  |
| 5. Formwork Geometry.               | OIAF         | Inspect formwork for general conformance with the construction documents (OIAF).  |
| 6. Concrete Placement.              | SER<br>OIAF  | Observe concrete placement operations. Verify conformance to specifications including cold-weather and hot weather placement procedures. During concrete placement, perform slump, density, and air content tests in conformance with construction documents (OIAF). Review OIAF reports (SER). |
| 7. Evaluation of Concrete Strength. | SER<br>OIAF  | Perform strength evaluation tests on concrete cylinders in accordance with the construction documents (OIAF). Review concrete test reports for conformance with the construction documents (SER).   |
| 8. Curing and Protection.           | SER<br>OIAF  | Review hot and cold weather protection procedures. After concrete placement, observe curing and protection procedures for conformance with construction documents (OIAF). Review OIAF reports (SER).  |

---

**SECTION 015000 - TEMPORARY FACILITIES AND CONTROLS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.

**1.2 SUMMARY**

- A. This Section includes requirements for temporary utilities, support facilities, and security and protection facilities.
- B. Related Sections include the following:
  - 1. Division 01 Section "Summary" for limitations on utility interruptions and other work restrictions.
  - 2. Division 01 Section "Submittal Procedures" for procedures for submitting copies of implementation and termination schedule and utility reports.
  - 3. Division 01 Section "Execution" for progress cleaning requirements.
  - 4. Divisions 02 through 16 Sections for temporary heat, ventilation, and humidity requirements for products in those Sections.
- C. Temporary utilities required include, but are not limited to:
  - 1. Water service and distribution.
  - 2. Temporary heating.
  - 3. Temporary power and lighting as specified in Division 16.
  - 4. Temporary telephone service.
- D. Temporary internet service, construction camera, and security.
- E. Temporary construction and support facilities required include, but are not limited to:
  - 1. Temporary field offices.
  - 2. Temporary signage.
  - 3. Waste disposal services.
  - 4. Temporary cranes, lifts, derricks, and hoisting services.
  - 5. Temporary staging and scaffolding.
  - 6. Temporary bracing, shoring, sheeting, and tie-downs.
  - 7. Temporary yard and storage on and off-site.
  - 8. Construction aids and miscellaneous services and facilities.
  - 9. Sweeping compound.

- 
10. Emergency portable generators of size required, if permanent power is temporarily unavailable. Dust control.
  11. Temporary protection of work in place and stored materials.
  12. Security and protection facilities required include, but are not limited to:
    - a. Temporary weather protection, enclosures, and covers.
    - b. Temporary fire protection.
    - c. Barricades, warning signs, lights.

### 1.3 DEFINITIONS

- A. Permanent Enclosure: As determined by Architect, permanent or temporary roofing is complete, insulated, and weathertight; exterior walls are insulated and weathertight; and all openings are closed with permanent construction or substantial temporary closures.

### 1.4 USE CHARGES

- A. General: Cost or use charges for temporary facilities shall be included in the Contract Sum. Allow other entities to use temporary services and facilities without cost, including, but not limited to, Owner's construction forces, Architect, Owner's Project Manager, testing agencies, inspection agencies, representatives of product manufacturers, suppliers, and authorities having jurisdiction.
- B. Sewer Service: Pay sewer service use charges for sewer usage by all entities for construction operations.
- C. Electric Power Service: Pay electric power service use charges for electricity used by all entities for construction operations.

### 1.5 SUBMITTALS

- A. Construction Yard layout Plan: Show temporary facilities, utility hookups, staging areas, and parking areas for construction personnel.
  1. Locate Architect's / Owner's Project Manager's field office near Contractor's field office(s). Provide space for six (6) reserved car spaces to park adjacent to Architect's and Owner's Project Manager's field offices.

### 1.6 QUALITY ASSURANCE

- A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

1.7 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Installer of each permanent service shall assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

**PART 2 - PRODUCTS**

2.1 MATERIALS

- A. Temporary Chain-Link Fencing: Minimum 2-inch, 0.148-inch- thick, galvanized steel, chain-link fabric fencing; minimum 6 feet high with galvanized steel pipe posts; minimum 2-3/8-inch- OD line posts and 2-7/8-inch- OD corner and pull posts, with 1-5/8-inch- OD top rails.
- B. Lumber, Plywood, Miscellaneous Hardware, Fasteners, and Lexan Plastic: Provide dimension lumber and plywood, fire treated as noted, otherwise preservative treated for items in contact with earth, for temporary structures.
- C. Mineral Surfaced Asphalt Coated Roofing for temporary structures.
- D. Asphaltic Concrete Paving for temporary structures.
- E. Metal bars, cable, and Portland cement concrete for deadmen and anchoring temporary structures.

2.2 TEMPORARY FACILITIES

- A. Field Offices, General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading, and tie downs to resist overturning from wind loading.
- B. Construction Manager's Field Office: Of sufficient size to accommodate needs of the construction manager's personnel. Keep office clean and orderly. Furnish and equip office as follows:
  - 1. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
  - 2. Conference room of sufficient size to accommodate meetings of project participants.
- C. Architect's and Owner's Project Manager's Field Office: Size and arrangement as indicated on drawing Sheet Number 01500B. Locate near existing sanitary sewer and water mains installed in the Site Preparation Phase and convenient to the Construction

---

Manager's office. Provide weekly professional office cleaning; and cleaning and sanitizing of toilet rooms. Furnish and equip offices as follows:

1. Provide a furniture and office equipment budget of \$40,000.00 which includes ordinary furniture, a high speed copier/scanner/fax machine, and a large format scanner.
2. Provide electrical power service and 120-V ac duplex receptacles, with not less than 1 receptacle on each wall. Provide lighting fixtures capable of maintaining average illumination of 60 foot candles at desk height. Provide duplex outlets, telephone outlets, data wiring outlets near each desk on the adjacent wall and to one desk and the conference table run under floor. Power water heater and heat tapes, and HVAC equipment.
3. Connect to City water on site and City sewer on site. Provide hot and cold water in private toilet rooms for each sex. Provide 20 gallon hot water type heater under sink cabinet or instantaneous water heaters at each lavatory and sink. Provide a water closet and lavatory in each toilet room. Provide a sink in a residential type 6' long base cabinet with preformed plastic laminated countertop. Provide 2-18" wall cabinet each side of sink. Connect sink, lavatories, and water closet to water and sewer in protective covering with heat tape or other means to prevent freezing.
4. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F winter and 75 to 80 deg F summer.

D. NOT USED

E. Provide a project sign in accordance with the layout as shown on drawing Sheet Number 01500C. Have sign maker contact architect for copy. Sign maker should layout and submit proof showing all names and text for approval prior to making sign.

F. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.

1. Sheds shall be of ordinarily non-combustible materials or fire treated lumber and plywood.
2. Store combustible materials apart from building.

## 2.3 TEMPORARY CRANES, LIFTS, DERRICKS, AND HOISTING SERVICES

A. Each Sub-contractor at any tier, or Trade Subcontractor at any tier shall provide their own lifts, derricks, hoisting services, etc. (including crane services outside the building) for their own work outside and inside the building to properly complete their work.

- B. All cranes, lifts, derricks, and hoisting equipment, machinery, and operation shall comply in all respects to the governing laws and codes.

## 2.4 TEMPORARY STAGING AND SCAFFOLDING

- A. Each Sub-contractor at any tier, or Trade Subcontractors shall furnish, erect, and maintain in safe condition all exterior and interior staging and scaffolding for their own use.
- B. All staging and scaffolding shall be enclosed at the ground by an six (6) foot high temporary construction fence as defined elsewhere in this Section.
- C. Staging and scaffolding shall comply in all respects to the governing laws and codes.

## 2.5 TEMPORARY BRACING, SHORING, SHEETING, AND TIE-DOWNS

- A. The General Contractor shall take all precautions to protect the Work against collapse or other damage by earth or construction loads, high winds, snow and rain loads, damage by adverse weather conditions or geological disturbances, or other cause, by temporary bracing shoring, sheeting, guying, lacing, covering, weighting, and other reasonable and prudent means.

## 2.6 EQUIPMENT

- A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
- B. HVAC Equipment: Provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.
  - 1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
  - 2. Heating Units: Listed and labeled for type of fuel being consumed, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
  - 3. Permanent HVAC System: If Owner authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of 8 at each return air grille in system and remove at end of construction.

# PART 3 - EXECUTION

## 3.1 INSTALLATION, GENERAL

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
- B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

### 3.2 TEMPORARY UTILITY INSTALLATION

- A. General: Install temporary service or connect to existing service.
  - 1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
- B. Sewers and Drainage: Provide temporary connections to new utilities to remove effluent lawfully.
  - 1. Connect temporary sewers to municipal system as directed by authorities having jurisdiction.
- C. Water Service:
  - 1. Connect temporary water services to existing water mains and hydrants will be permitted subject to D.P.W. Water Operation's approval. At Substantial Completion, restore these facilities to condition existing before initial use.
- D. Sanitary Facilities:
  - 1. Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.
- E. Heating: Provide temporary heating required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.
- F. Ventilation and Humidity Control: Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.
- G. Electric Power Service: Provide temporary electric power service and distribution system of sufficient size, capacity, and power characteristics required for construction operations.

1. Install temporary electric power service overhead, unless otherwise indicated.
- H. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.
  1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.
- I. Telephone Service: Provide temporary telephone service in common-use facilities for use by all construction personnel. Install a sufficient number of telephone line(s) for each contractor's field office to a centrally located backboard for contractors. Provide one pay phone or provide a phone for the use of construction personnel.
  1. Provide telephone lines/service for the Owner's Project Manager and Architect: Provide four voice telephone lines/numbers and small telephone system to accommodate one phone handset capable to answer all four lines/numbers at each desk. Provide a business DSL service, modem, and router networked via Ethernet to each computer/desk and the large format scanner and the multifunction copier, scanner, fax machine. Provide a dedicated telephone line for the multifunction copier, scanner, fax machine.
  2. At each telephone, post a list of important telephone numbers.
    - a. Police and fire departments.
    - b. Ambulance service.
    - c. Contractor's home office.
    - d. Project Emergency Contact List.
  3. Provide superintendent with cellular telephone or portable two-way radio for use when away from field office.
- J. Electronic Communication Service: Provide temporary electronic communication service, including electronic mail, in common-use facilities.
  1. Provide DSL line in primary field office.
  2. Provide DSL line in Owner's Project Manager and Architect field office. See above.

### 3.3 SUPPORT FACILITIES INSTALLATION

- A. General: Comply with the following:
  1. Provide non-combustible construction for offices, shops, and sheds located within construction area or within 30 feet of building lines. Comply with NFPA 241.
  2. Do not store combustibles within 30 feet of any existing or new building.
  3. Do not store flammables within 50 feet of any existing or new building.

- 
4. Maintain support facilities until near Substantial Completion. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to Owner.
- B. Traffic Controls: Comply with requirements of authorities having jurisdiction.
    1. Protect existing site improvements to remain including curbs, pavement, and utilities.
    2. Maintain access for fire-fighting equipment and access to fire hydrants.
  - C. Parking: Provide temporary parking areas within the limits of work for construction personnel. Make arrangement for additional off-site parking areas.
  - D. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.
    1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties nor endanger permanent Work or temporary facilities.
    2. Remove snow and ice as required to minimize accumulations.
  - E. Project Identification and Temporary Signs: Provide the project identification sign as in 2.2, E. Provide other signs to control access encourage safety, and direct activities may be installed as needed.
    1. Install signs to inform and direct the public and individuals seeking entrance to Project.
    2. Contractors and sub-contractors may install identification signs on temporary office trailers and storage trailers only.
    3. Unauthorized signs are not permitted. No sign or banner may be affixed to any fence or building.
    4. Provide temporary, directional signs for construction personnel and visitors.
    5. Maintain and touchup signs so they are legible at all times.
  - F. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with Division 01 Section "Execution" for progress cleaning requirements.
  - G. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.
    1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.
  - H. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.

### 3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. Temporary Erosion and Sedimentation Control: Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to adjacent properties and walkways, according to requirements of authorities having jurisdiction.
  - 1. Inspect, repair, and maintain erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
- B. Storm water Control: Comply with authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
- C. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.
- D. Site Enclosure Fence: Maintain site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.
  - 1. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Provide Owner's Project Manager and City Clerk of Works with one set of keys.
- E. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.
- F. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.
  - 1. Where heating or cooling is needed and permanent enclosure is not complete, insulate temporary enclosures.
- G. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241.
  - 1. Prohibit smoking in construction areas within sight of the existing school and street.
    - a. Violation of this provision will result in a complete ban on smoking anywhere on-site. Persons repeatedly violating this provision shall be barred from the site.
  - 2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.

- 
3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.

### 3.5 OPERATION, TERMINATION, AND REMOVAL

- A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
- B. Maintenance: Maintain facilities in good operating condition until removal.
  1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
- C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.
- D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
  1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
  2. At Substantial Completion, clean and renovate permanent facilities used during construction period. Comply with final cleaning requirements specified in Division 01 Section "Closeout Procedures."

END OF SECTION

Section 01 56 39  
TEMPORARY TREE AND PLANT PROTECTION

PART 1 GENERAL

1.0 RELATED DOCUMENTS

- A. Division 00 – PROCUREMENT AND CONTRACTING REQUIREMENTS and applicable parts of Division 01 - GENERAL REQUIREMENTS, as listed in the Table of Contents, shall be included in and made a part of this Section.

1.1 DESCRIPTION OF WORK

- A. Protection of existing trees and plants from damage as a result of the Contractor's operations including, but not limited to:
  - 1. Tree protection fencing.
  - 2. Root pruning and construction pruning.

1.2 RELATED REQUIREMENTS

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
  - 1. Section 31 10 00, SITE CLEARING.
  - 2. Section 31 20 00, EARTH MOVING: Silt fencing.
  - 3. Section 32 91 19, LANDSCAPE GRADING
  - 4. Section 32 93 00, TREES, PLANTS, AND GROUND COVERS: New plant material.

1.3 REFERENCED STANDARDS

- A. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern.
  - 1. American National Standards Institute (ANSI):

|        |  |
|--------|--|
| Z133.1 | Safety Requirements for Pruning, Trimming, Repairing, Maintaining and Removing Trees, and for Cutting Brush. |
| A300   | Tree Care Operations - Tree, Shrub And Other Woody Plant Maintenance - Standard Practices (All Parts)        |

2. International Society of Arboriculture (ISA):

Guide

Guide for Establishing Values of Trees and Other Plants

3. TCIA -- Tree Care Industry Association, Inc. (TCIA):

Ref. 1

Pruning Standards for Shade Trees

1.4 SUBMITTALS

- A. Prepare and submit drawings indicating the extent of tree protection fencing required.
- B. Proposed methods, and schedule for effecting tree and plant protection shall be submitted for approval.
- C. Proposed methods, materials, and schedule for root pruning, construction pruning, and tree fertilization, in accordance with ANSI A300 Tree Management standards specification writing guidelines, shall be submitted by Certified Arborist for approval.
- D. A Certified Arborist may be hired by the contractor to review various site conditions and perform work as listed in these specifications. In this case Arborist qualifications shall be submitted for Architect's review and approval.

1.5 QUALITY ASSURANCE

- A. Tree Service Firm Qualifications: An experienced tree service firm that has successfully completed tree protection and trimming work similar to that required for this Project and that will assign an experienced, qualified arborist to Project site during execution of tree protection and trimming.
- B. All tree work shall be performed by a professional Certified Arborist with a minimum five years experience, who has successfully completed a certification program equal to the Massachusetts Certified Arborist (MCA) program/examination sponsored by the Massachusetts Arborists Association, 8-D Pleasant Street, South Natick, MA 01760; (508) 653-3320; FAX: (508) 653-4112; E-mail: MaarbAssn@aol.com.
- C. Arborist shall have the following minimum qualifications:
  - 1. Membership in:
    - a. TCIA -- Tree Care Industry Association, Inc.
    - b. ISA -- International Society of Arborists
  - 2. Meet state requirements for insurance.
  - 3. Licenses for application and use of pesticides.

1.6 DAMAGE PENALTIES

- A. Certain specimen trees within the construction areas and in other key locations will be identified by the Owner and the Architect, and marked with red tags. Loss of any of these trees will result in fines assessed at \$10,000 per tree. Damage to or loss of all other trees on the property will be assessed at the rate of \$400 per inch caliper of the tree.

- B. A fine of \$2,500 will be levied against the Contractor for each incident of construction inside tree protection areas.
- C. Damages to trees, shrubs, and other vegetation will be assessed by the Architect and Owner in accordance with the ISA Guide.
- D. Trees or roots visibly damaged will cause the Owner to withhold from the Contractor an assessed amount conforming to the requirements stipulated above for a period of two years. After that period the impact of the damage to any tree will be assessed accordingly.
- E. If any trees or shrubs designated to be saved are damaged and replacement is required, a number and diameter of trees or shrubs of the same species and variety, as specified by the Owner and Architect, shall be furnished and planted by the Contractor. The total inch diameter of the replacement trees or shrubs shall equal the diameter of the tree or shrub to be replaced.

## PART 2 PRODUCTS

### 2.1 TREE PROTECTION FENCING

- A. Tree protection fencing shall be the following:
  - 1. Galvanized chain link fencing, 6 ft. high.
  - 2. Fabric shall be a good commercial quality of steel wire of 2 in. mesh and 11 gage.
  - 3. Fittings shall be malleable iron casting, wrought iron forgings, or pressed steel and provided with pin connections. Equipment shall be designed to carry 100% overload.
  - 4. Piping shall be steel conforming to ASTM A 120 except that pipe shall be unthreaded and untested for water pressure.
- B. Stakes for fencing shall be 9 ft. galvanized steel posts, driven a minimum of 3 ft. into the ground. Posts shall be spaced 10 ft. o.c. maximum.
  - 1. No fence posts shall be driven until underground utilities have been located by "DigSafe 811". Concrete or weighted bases may be acceptable alternatives used for surface mounting. Review with Architect for approval.
- C. For fencing within the drip line of trees, surface mounted post anchors may be acceptable. Review with Architect to obtain written approval prior to installing. Post installation shall not damage tree root systems.

### 2.2 ROOT PRUNING

- A. Peat moss and mulch materials shall be as specified under Section 329300, TREES PLANTS, AND GROUND COVERS.
- B. Liquid fertilizer to be applied to root pruned and construction pruned trees shall be Peters M 77 Sequestered-Chelated Soluble Fertilizer manufactured by W.R. Grace and Co., Cambridge, MA 02140, Gold Start Liquid Fertilizer, manufactured by Nutra-Flo Company, 1919 Grand Ave, Sioux City, IA 51106-5708; Phone: 712-277-2011; 800-831-4815; Fax: 712-279-1946; Agro- Culture Liquid Fertilizer, manufactured by Agro-Culture Liquid Fertilizers, 3055 W. M-21, P.O. Box 150, St. Johns, Michigan 48879; 1-800-678-9029, or approved equal. Liquid fertilizer shall be approved by Landscape Architect or Certified Arborist.

- C. Dormant oil spray shall be a dormant miscible spray equal to Sunspray' Scalecide' or Volck Oil.
- D. Insecticide shall be EPA approved for the intended use and the names should be provided to, and approved by the Landscape Architect prior to use.

### PART 3 EXECUTION

#### 3.1 PROTECTION FOR EXISTING TREES TO BE PRESERVED:

- A. All trees to be preserved on the property shall be protected against damage from construction operations.
  - 1. Includes associated understory and areas within dripline of the tree.
- B. Only those trees located within the limit of work to be constructed as indicated, shall be removed.
  - 1. All trees to remain shall be flagged for review after the location of improvements to be constructed are staked in the field.
  - 2. Any tree to be removed shall be reviewed by the Architect and Owner for approval prior to removal.
- C. Erect fencing and armor protection prior to beginning any clearing, demolition or construction activity, and unless otherwise instructed, maintain in place until construction is completed.
  - 1. Obtain approval of installation of tree barricade fencing from Owner and Architect prior to the initiation of any removal of vegetation and construction.
  - 2. Tree protection barricade shall be erected at the edge of the dripline except in extreme circumstances and with the approval of the Architect, fencing may be located at the edge of the root protection zone.
    - a. For trees 10 inch caliper and less, the minimum distance the barrier shall be erected is ten (10) feet from the trunk of tree or clump of trees.
  - 3. Trees immediately adjacent to and within one hundred feet (100) of any construction activities are to be protected by barricade fencing; subject to approval of the Architect and Owner.
  - 4. Trees exposed to construction activity within the dripline or within twenty-five (25) feet of any construction activity are to have trunks protected with tree armor in addition to barricade fencing.
  - 5. The tree protection barricade shall be placed before any excavating or grading is begun and maintained for the duration of the construction work unless otherwise directed.
  - 6. No material shall be stored or construction operation shall be carried on within the tree protection barricade or within tree dripline.
  - 7. Tree protection barricade shall remain until all work is completed.
  - 8. Remove tree protection barricade at commencement of finish grading.
  - 9. Remove tree armor immediately prior to Substantial Completion.

- D. Protect tree trunk with tree armor to a height of 8' or to the limits of lower branching (when exposed to construction activity within the drip line) with 2x4's butted side to side completely around trunk.
  - 1. Wire wrap do not nail, around trees.
- E. Protect trees that are to remain, whether within barricade fencing or not, from the following:
  - 1. Compaction of root area by equipment or material storage; construction materials shall not be stored closer to trees than the farthest extension of their limbs (dripline).
  - 2. The proposed finished grade within the root protection zone (RPZ) of any preserved tree shall not be raised or lowered more than three (3) inches.
    - a. Retaining methods can be used to protect and/or provide lateral support to the area outside the root protection zone.
  - 3. Trunk damage by moving equipment, material storage, nailing or bolting.
  - 4. Strangling by tying ropes or guy wires to trunks or large branches.
  - 5. Poisoning by pouring solvents, gas, paint, etc., on or around trees and roots.
  - 6. Cutting on roots by excavating, ditching, etc.
    - a. Prior to excavation within the tree drip lines or the removal of trees adjacent to other trees that are to remain, make a clean cut between the disturbed and undisturbed root zones with a rock saw or similar equipment to minimize root damage to be performed by Certified Arborist.
    - b. Refer to EXCAVATION AROUND TREES for additional information.
  - 7. Damage of branches by improper pruning.
  - 8. Drought from failure to water or by cutting or changing normal drainage pattern past roots. Contractor shall provide means as necessary to ensure positive drainage.
  - 9. Changes of soil pH factor by disposal of lime base materials such as concrete, plaster, lime treatment at pavement subgrade, etc. When installing concrete adjacent to the root zone of a tree, use a minimum 6 mil. plastic vapor barrier behind the concrete to prohibit leaching of lime into the soil.
  - 10. Do not cut roots 1" in diameter or over without approval of Owner's Representative. All excavation and earthwork within the RPZ of trees shall be done by hand and performed by a Certified Arborist.
  - 11. Protect all existing trees near areas to be stabilized from underground contaminations by placing a 6 mil. Plastic film barrier along exposed vertical cut extending a minimum 12" into undisturbed subgrade below depth of stabilization.
  - 12. No vehicular traffic shall occur within the drip line of any tree; including parking of vehicles.
  - 13. No soil shall be spread, spoiled or otherwise disposed of under any tree within the RPZ.
- F. Any damage done to existing tree crowns or root systems shall be repaired by the Arborist to the satisfaction of the Architect and Owner's Representative.
  - 1. Broken branches shall be cut cleanly.
  - 2. Any roots cut shall be cut cleanly with a saw other means approved by the Architect and Owner's Representative.
- G. Damages to trees caused through negligence of Contractor or his employees will be assessed by Owner and Project Arborist as described in Paragraph 1.07.

3.2 ROOT PROTECTION ZONE:

A. Root Protection Zone (RPZ).

1. No disturbance shall occur closer to the tree than one-half the radius of the RPZ or within five (5) feet of the tree whichever is greater.

3.3 PROTECTED ROOT ZONE IMPACTS:

A. Those trees to remain which have some encroachment on their protected root zone shall have the following maximum allowable impacts:

1. Minimum Protection Criteria 'A': No disturbance of natural grade, e.g. trenching or excavation, can occur closer to the tree than one-half the radius of the RPZ or within five (5) feet of the tree whichever is greater.
2. Minimum Protection Criteria 'B': No cut or fill greater than three (3) inches will be located closer to the tree trunk than  $\frac{1}{2}$  the RPZ radius distance.

B. Trees impacted shall have a minimum of a six (6) inch layer of mulch placed and maintained over the root protection zone and the undisturbed area within the dripline.

1. Immediate pruning and fertilization shall occur per the pruning and fertilization sections of this specification.
2. Provide water in a slow drip manner to impacted trees as approved by the Architect and Owner's Representative.
3. Provide water to apply equivalent to 1 inch once per week to deeply soak in over the area within the dripline of the tree during periods of hot, dry weather.
4. Spray tree crowns periodically to reduce dust accumulation on the leaves.

3.4 EXCAVATING AROUND TREES

A. Excavate within the dripline of trees only where required and when absolutely necessary.

1. Any excavation within the RPZ of trees shall be under the direction of the Arborist.
2. Arborist shall be at site at all times while excavation is occurring within the RPZ.
3. Air spade all removals within the RPZ.
4. Refer to ROOT PROTECTION ZONE.

B. When excavating for new construction is required within the PRZ, air spade and hand excavate to minimize damage to root systems.

1. Use narrow tine spading forks and comb soil to expose roots.
2. Relocate roots back into backfill areas wherever possible.
3. If large main lateral roots are encountered, expose beyond excavation limits as required to bend and relocate without breaking.
4. If root relocation is not practical, clean cut roots using sharp ax approximately three (3) inches back from new construction.

C. Where existing grade is above new finish grade, carefully excavate within the dripline to the new finish grade.

1. Carefully hand excavate an additional six (6) inches below the finish grade.

2. Use narrow tine spading forks to comb the soil to expose the roots, and prune the exposed root structure as recommended by the Arborist.
  3. Keep the exposed roots damp.
  4. Treat the cut roots as specified and as recommended by the Arborist.
  5. After pruning and treatment of the root structure is complete, backfill to finish grade with eight (8) inches of approved plant mix.
- D. Where noted on plan, use airspade to expose roots for required cutting to accommodate hardscape elements. Architect to verify all cuts prior to proceeding.
- E. Temporarily support and protect roots against damage and covered with recommended landscape material.

### 3.5 INSTALLATION OF FENCING

- A. Prior to start of demolition work and clearing and grubbing operations, tree protection fencing shall be installed in accordance with Paragraph 3.01C.

### 3.6 ROOT PRUNING

- A. Where construction will occur within drip line of existing trees designated to remain, roots shall be pruned in accordance with ANSI A300.
- B. All root pruning shall be done by Certified Arborist only. Trenching, vibrating plow, and stump grinding are NOT suitable means for root pruning.
- C. Roots greater than 1 in. diameter shall be pruned by means of a hand saw, or other approved means.
- D. Install root protection measures as prescribed by Certified Arborist.

### 3.7 CROWN REDUCTION PRUNING

- A. Crown reduction pruning shall be performed in accordance with ANSI A300 Part 1 Pruning standards using the Reduce Method (7.4). A written description or field review that details the location and size of branches to be removed shall be approved by the Architect and Certified Arborist prior to the start of work.

### 3.8 FERTILIZATION AND INSECT SPRAYING

- A. Root pruned and construction pruned trees shall be treated with liquid fertilizer, dormant oil spray, and insecticide as prescribed by Certified Arborist.
- B. Liquid fertilizer shall be applied at a rate recommended by the manufacturer and as required by ANSI A300 Part 2 Soil Management standards.
- C. Dormant oil spray shall be applied in early spring before buds begin to swell at a rate recommended by the manufacturer.
- D. Insecticide spray shall be applied twice to root pruned trees following application of dormant oil spray. Spray insecticide at rates recommended by spray manufacturer at intervals appropriate for effective insect control.

3.9 REMOVAL OF PROTECTION

- A. All protection shall remain in place throughout the construction period. Remove protection devices only after written permission has been granted by the Architect.

END OF SECTION

Section 01 60 00  
PRODUCT REQUIREMENTS

**PART 1 - GENERAL**

1.1 SECTION INCLUDES

- A. Definition of Terms
- B. Basic product requirements.
- C. General environmental requirements for products.
- D. Recycled content of materials.
- E. Regional materials.
- F. Sustainable wood, chain of custody.
- G. Owner furnished products.
- H. Product delivery and handling requirements.
- I. Product storage and protection requirements.
- J. Construction waste management.

1.2 RELATED SECTIONS

- A. Section 01 25 13 –PRODUCT SUBSTITUTION PROCEDURES:
  - 1. Product options.
  - 2. Product substitution procedures.
- B. Section 01 33 29 - SUSTAINABLE DESIGN REPORTING: Special administrative and procedure requirements related to the Owner's *LEED v4, LEED for Building Design and Construction, LEED BD+C: Schools* rating system certificate goals of energy conservation and efficiency, indoor air quality, and natural resource efficiency.
- C. Section 01 74 19 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL: Procedural and administrative requirements for construction and demolition recycling.

1.3 DEFINITION OF TERMS

- A. "Products" is defined as new material, machinery, components, equipment, fixtures, and systems used in the Work. Products do not include machinery and equipment used for preparation, fabrication, conveying and erection of the Work. Products may also include existing materials or components required for re-use.
- B. "Materials" are products that are shaped, cut, worked, mixed, finished, refined or otherwise fabricated, processed, or installed to form a part of the Work.
- C. "Equipment" is a product with operational parts, whether motorized or manually operated, that requires service connections such as wiring or piping.

- D. Definitions in this article are not intended to negate the meaning of other terms used in Contract Documents, including "specialties", "systems", "structure", "finishes", "accessories", "furnishings", "special construction", and similar terms, which are self-explanatory and have recognized meanings in the construction industry.

#### 1.4 BASIC PRODUCT REQUIREMENTS

- A. General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged and, unless otherwise indicated, that are new at time of installation.
  - 1. Where possible utilize materials harvested and manufactured regionally, within a 500-mile radius of the project site. Refer to Regional Materials Article herein this Section.
- B. To the fullest extent possible, provide products of the same kind, from a single source.
- C. Provide interchangeable components of the same manufacturer, for similar components.
- D. When the Construction Manager has the option of selecting two or more products, ensure that products selected shall be compatible with products previously installed or approved.
- E. Provide all products complete with all accessories, trim, finish, safety guards and other devices and details needed for a complete installation and for the intended use and effect.
- F. Galvanic Corrosion: Install materials in manner which will effectively isolate dissimilar metals which may potential for galvanic corrosion. Use non-absorptive dielectric material, isolation coatings, or other protective isolator approved by Architect.
- G. Fasteners, Anchors, and Connections: Provide all fasteners, anchors, and connections needed to safely, securely, and appropriately secure all Work permanently in place.
  - 1. General: The Contractor is solely responsible for the capacity, suitability, adequacy, and safety of all welded, fastened and anchored connections.
    - a. Comply with applicable code requirements regarding fastener selection and installation.
    - b. Provide at least two fasteners for each individual item being fastened.
    - c. Utilize fastener manufacturer's published load tables for working loads to assist in determining fastener size and space. Do not use ultimate load capacity in determining fastener selections.
    - d. Provide a minimum safety factor of 4.
    - e. Select and utilize fasteners having minimum galvanic corrosion factor.
    - f. Hydrogen embrittlement prevention:
      - 1) Do not use high-strength and low-alloy fasteners which have been subjected to an acid pre-treatment (because they can become brittle and fail), utilize instead equivalent capacity and size bi-metal,

stainless steel or high strength aluminum fasteners, as appropriate to the conditions and materials where being used.

- 2) Utilize low-hydrogen electrodes for welding high-strength steels to prevent hydrogen embrittlement.
2. To permit the Construction Manager control over means and methods, some fastener conditions may not be fully defined in the Contract Documents. In particular, individual specification sections that require delegated independent engineering. In such instances the Construction Manager is fully responsible to determine method of fastening appropriate for each condition. The Construction Manager shall take into consideration substrate material(s) and product(s) being fastened, live and dead loading, and both atmospheric and visual exposure considerations. Construction Manager is responsible to determine fastener type, material, finish, size, diameter, length and spacing.
3. Torque structural fasteners as recommended by fastener manufacturer, or as otherwise specified in the Contract Documents.
4. The Construction Manager is solely responsible for the capacity, suitability, adequacy, and safety of all welded, fastened and anchored connections.

H. Permanent Labels and Nameplates:

1. Restrictions:
  - a. Do not provide labels, nameplates, or trademarks which are not required by code, or regulations.
  - b. Do not provide labels, nameplates or trademarks when individual specification sections specifically exclude them.
  - c. Do not expose manufacturers, suppliers, or installer's name, logo, or trade names on normally visible surfaces.
2. Location for required labels: Required labels, approval plates and stamps shall be located on a concealed surface, or where required for observation after installation on accessible non-conspicuous surface.
3. Data Plates: Provide permanent data plate on each item of service-connected or power-operated equipment.
  - a. Data Plate Information: Include manufacturer, model, serial number, date of manufacture, capacity, ratings, power requirements, and all other similar essential data.
  - b. Locate data plates on easily accessible surface that is inconspicuous in occupied spaces.

1.5 GENERAL ENVIRONMENTAL REQUIREMENTS FOR PRODUCTS

- A. General: Comply with LEED Certification requirements and as specified herein. Prohibit the use of or incorporation into the work of materials which contain toxic, hazardous and harmful materials.
1. Hazardous materials: Defined as pesticides, biocides, and carcinogens as listed by recognized authorities, such as the Environmental Protection Agency (EPA), the International Agency for Research on Cancer (IARC) or regulated under OSHA Hazard Communication Standard, 29 CFR 1910.1200.
  2. Harmful materials: Defined as materials which contain the presence of chemical, physical, or biological elements or agents which adversely affect

- 
- human health or welfare; unfavorably alter ecological balances; or degrade the utility of the environment for aesthetic, cultural, or historical purposes.
3. Owner restricted materials: Defined as all products to which the Owner has a reasonable objection because of its content, composition, properties, or characteristics.
- B. Vapors, Gases, Fumes, Odors:
1. General: Comply with all state and federal VOC requirements. Where ever possible use non-VOC materials.
    - a. Limit use of products to the greatest extent possible which have "off-gassing", fumes, flammability, and other harmful characteristics.
      - 1) Prohibit use of products which contain substances that contribute significantly to the production of photochemical smog, tropospheric ozone, or poor indoor-air quality.
    - b. Limit use of ozone-depleting compounds to the greatest extent possible. An ozone-depleting compound is any compound with an ozone-depletion potential greater than 0.01 (CFC 11 = 1).
    - c. Use organic and biodegradable cleaners to the greatest extent possible.
  2. Do not install, use for installation, and use for cleaning those materials which may produce objectionable (to Owner and public) vapors, gases, fumes, odors, or similar conditions.
  3. Do not install or use products which may have possible chemical or biological reactions with other on-site materials.
- C. Toxicity of prefabricated wood products (composite wood and agrifiber products): Products shall contain no added urea-formaldehyde resins.
1. Laminating adhesives used to fabricate on-site and shop-applied composite wood and agrifiber assemblies shall contain no added urea-formaldehyde resins.
- D. Adhesives: Provide adhesives approved by the manufacturer's of the products being adhered which are low-VOC or no-VOC, non-flammable, waterproof after cured, odor free and comply with LEED certification requirements.
1. All adhesives, sealants and sealant primers used on the interior of the building (defined as inside of the weatherproofing system and applied on-site) shall comply with the requirements of the South Coast Air Quality Management District (SCAQMD) Rule 1168 VOC limits, Less Water and Less Exempt Compounds and Green Seal GS-36 Aerosol Adhesives VOC Limits.
    - a. South Coast Air Quality Management District (SCAQMD) Rule 1168 VOC limits, Less Water and Less Exempt Compounds:
      - 1) Architectural Applications VOC Limit [g/L less water]
        - a) Indoor Carpet Adhesives 50
        - b) Carpet Pad Adhesives 50
        - c) Wood Flooring Adhesives 100
        - d) Rubber Floor Adhesives 60
        - e) Subfloor Adhesives 50
        - f) Ceramic Tile Adhesives 65
        - g) VCT & Asphalt Adhesives 50

- 
- |    |                                     |     |
|----|-------------------------------------|-----|
| h) | Drywall & Panel Adhesives           | 50  |
| i) | Cove Base Adhesives                 | 50  |
| j) | Multipurpose Construction Adhesives | 70  |
| k) | Structural Glazing Adhesives        | 100 |
- 2) Specialty Applications      VOC Limit [g/L less water]
- |    |                                  |     |
|----|----------------------------------|-----|
| a) | PVC Welding                      | 510 |
| b) | CPVC Welding                     | 490 |
| c) | ABS Welding                      | 325 |
| d) | Plastic Cement Welding           | 250 |
| e) | Adhesive Primer for Plastic      | 550 |
| f) | Contact Adhesive                 | 80  |
| g) | Special Purpose Contact Adhesive | 250 |
| h) | Structural Wood Member Adhesive  | 140 |
| i) | Sheet Applied Rubber Lining      | 850 |
| j) | Top & Trim Adhesive              | 250 |
- 3) Sealants      VOC Limit [g/L less water]
- |    |               |     |
|----|---------------|-----|
| a) | Architectural | 250 |
| b) | Other         | 420 |
- 4) Substrate Specific Applications      VOC Limit [g/L less water]
- |    |                               |    |
|----|-------------------------------|----|
| a) | Metal to Metal                | 30 |
| b) | Plastic Foams                 | 50 |
| c) | Porous Material (except wood) | 50 |
| d) | Wood                          | 30 |
| e) | Fiberglass                    | 80 |
- 5) Sealant Primers      VOC Limit [g/L less water]
- |    |                          |     |
|----|--------------------------|-----|
| a) | Architectural Non Porous | 250 |
| b) | Architectural Porous     | 775 |
| c) | Other                    | 750 |
2. Green Seal GS-36 Aerosol Adhesives VOC Limits:
- |    |   |   |
|----|---|---|
| a. | Aerosol Adhesives                             | VOC Limit [g/L less water]<br>by weight |
| 1) | General purpose mist spray                    | 65% VOCs                                |
| 2) | General purpose web spray                     | 55% VOCs                                |
| 3) | Special purpose aerosol adhesives (all types) | 70% VOCs                                |
- E. Carpet systems: Refer to Section 09 68 00 - Carpeting for VOC requirements.
- F. Interior Paints: Provide products that comply with specified VOC limits, refer to Section 09 91 00 – PAINTING for additional requirements.
1. For interior applications use paints and coatings that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA method 24) and the chemical restrictions (Restricted Components listed below) of Green Seal Standard GS-11, Paints, First Edition, May 20, 1993; Green Seal Standard GC-03, Anti-Corrosive Paints, Second Edition, January 7, 1997; and South Coast Air Quality Management District Rule 1113, Architectural Coatings, rules in effect on January 1, 2004, as follows:
-

- a. Green Seal GS-11 Limits for Interior Paints:
  - 1) Flat Paints and Coatings: VOC not more than 50 g/L.
  - 2) Non-Flat Paints and Coatings: VOC not more than 150 g/L.
- b. Green Seal GS-03 Limits for Anti-Corrosive Coatings:
  - 1) Anti-Corrosive Coatings (Gloss, Semi-Gloss and Flat): VOC not more than 250 g/L.
- c. South Coast Rule #1133 VOC Limits for Architectural Coatings:
  - 1) Bond breakers: VOC not more than 350 g/L.
  - 2) Clear wood finishes:
    - a) Varnishes: VOC not more than 350 g/L.
    - b) Sanding sealers: VOC not more than 350 g/L.
    - c) Lacquer: VOC not more than 550 g/L.
  - 3) Clear brushing lacquers: VOC not more than 680 g/L.
  - 4) Concrete curing compounds: VOC not more than 350 g/L.
  - 5) Dry-fog coatings: VOC not more than 400 g/L.
  - 6) Fireproofing exterior coatings: VOC not more than 350 g/L.
  - 7) Fire retardant coatings:
    - a) Clear: VOC not more than 650 g/L.
    - b) Pigmented: VOC not more than 350 g/L.
  - 8) Graphic art (sign) coatings: VOC not more than 500 g/L.
  - 9) Industrial maintenance (IM) coatings: VOC not more than 250 g/L.
  - 10) High temperature (IM) coatings: VOC not more than 420 g/L.
  - 11) Zinc rich (IM) primers: VOC not more than 100 g/L.
  - 12) Japans/faux finishing coatings: VOC not more than 350 g/L.
  - 13) Magnesite cement coatings: VOC not more than 450 g/L.
  - 14) Mastic coatings: VOC not more than 300 g/L.
  - 15) Metallic pigmented coatings: VOC not more than 500 g/L.
  - 16) Multi-color coatings: VOC not more than 250 g/L.
  - 17) Pigmented lacquer: VOC not more than 550 g/L.
  - 18) Pre-treatment wash primers: VOC not more than 420 g/L.
  - 19) Primers, sealers and undercoaters: VOC not more than 200 g/L.
  - 20) Quick-dry enamels: VOC not more than 250 g/L.
  - 21) Quick-dry primers sealers and undercoats: VOC not more than 200 g/L.
  - 22) Recycled coatings: VOC not more than 250 g/L.
  - 23) Rust preventative coatings: VOC not more than 400 g/L.
  - 24) Shellac-Clear: VOC not more than 730 g/L.
  - 25) Shellac-Pigmented: VOC not more than 550 g/L.
  - 26) Specialty primers: VOC not more than 350 g/L.
  - 27) Stains: VOC not more than 250 g/L.
  - 28) Sealers:
    - a) Waterproofing sealers: VOC not more than 250 g/L.
    - b) Waterproofing concrete and masonry sealers: VOC not more than 400 g/L.
  - 29) Wood preservatives: VOC not more than 350 g/L.

- 
- G. Sealants: Provide products that comply with specified VOC limits. Refer to Section 07 92 00 – JOINT SEALANTS for additional requirements.
1. Only use sealant and primers that comply with the following limits for VOC content:
    - a. Architectural Sealants: 250 g/L.
    - b. Roofing Sealants: 450 g/L
    - c. Roadway Sealants: 250 g/L.
    - d. Sealant primer: 250 g/L
  2. Sealants containing aromatic solvents, fibrous talc, formaldehyde, halogenated solvents, mercury, lead, cadmium, chromium and their compounds, are not permitted.
  3. Avoid the use of the following products: Butyl Rubber; Solvent Acrylic; Neoprene; Styrene Butadiene Rubber; Nitril.
- H. Material Safety Data Sheets (MSDS): Obtain and maintain on-site record data sheets for each product brought onto the Site.
1. Maintain an organized file of Material Safety Data Sheets at the job-site for quick reference.
  2. Furnish MSDS for all finishes, paints, coatings, curing compounds, sealers, adhesives, mastics, waterproofing, dampproofing, sealants, cleaning chemicals, carpets, upholstery, fabrics and all similar products.
- I. Cleaning and maintenance products:
1. Provide data on manufacturers' recommended maintenance, cleaning, refinishing and disposal procedures for materials and products utilized. These procedures are for final Construction Manager cleaning of the project prior to substantial completion and for provided materials and products as required by the specific specification sections.
    - a. Where chemical products are recommended for these procedures, provide documentation to indicate that no component present in the cleaning product at more than 1% of the total mass of the cleaning product is a carcinogen or reproductive toxicant as defined in the lists in this specification section.
    - b. For purposes of reporting, identification of product VOC contents shall not be limited to those regulated.
  2. Avoid cleaning products containing alpha-pinene, d-limonene or other unsaturated carbon double bond alkenes due to chemical reactions with ozone to form aldehydes, acidic aerosols, and ultra fine particulate matter in indoor air.
- J. Establish written Construction Manager's safety and emergency response procedures for safety precautions, accidents, emergency conditions, and clean-up methods.
- 1.6 OWNER'S PROPRIETARY PRODUCTS
- A. Owner's proprietary products: Under provisions of Massachusetts General Laws, Chapter 30, Section 39M(b) the Owner has determined that specific products shall be proprietary for 'sound reasons in the public interest'. This determination has
-

been made under vote of the Building Committee, and has been recorded in writing for public record.

- B. The following products are designated as proprietary:
1. Automatic temperature controls: Alerton/ABS.
  2. Condensing boilers: Lochinvar "Crest".
  3. Access control and video surveillance (with Axis camera): Genetec Unified Security System.
  4. Point of sale system at Cafeteria: Mosaic.
  5. Non-interchangeable core key cylinders: Corbin-Russwin.
  6. IP Telephone system: ShoreTel.
  7. Network switches: HP.
  8. Wireless access points: Cisco "Meraki".
  9. Document cameras: Epson.
  10. Interactive ultra-short-throw projectors with laser light source: Epson "Brightlink".

#### 1.7 OWNER FURNISHED PRODUCTS

- A. Owner Furnished Products: As provided in the General Conditions, the Owner will provide products by others under a separate agreements.
1. Owner's responsibilities regarding Owner furnished products:
    - a. Arrange for and deliver Owner reviewed shop drawings, product data, and samples to Construction Manager.
    - b. Arrange and pay for product delivery to site.
    - c. On delivery, inspect products jointly with Construction Manager.
    - d. Submit claims for transportation damage, and replace damaged, defective, or deficient items.
    - e. Arrange for manufacturers' warranties, inspections, and service agreements.
  2. Construction Manager's responsibilities regarding Owner furnished products:
    - a. Review Owner reviewed shop drawings, product data, and samples to Construction Manager.
    - b. For Owner-Furnished, Construction Manager Installed (OFCl) Products: Receive and unload products at site, inspect for completeness or damage, jointly with Owner.
    - c. Handle, store, and provide temporary protection.
    - d. Repair or replace items damaged after receipt.
    - e. As required by this Contract, finish, install, and clean products.
    - f. Provide protection of installed work.
    - g. When not installed under this Contract, the Construction Manager shall coordinate Owner installed work with interfacing work of this Contract. The Construction Manager shall provide temporary protection and final cleaning of Owner installed products, except as directed otherwise.

3. Items noted in Drawings as "Not in Contract" or "NIC", identify work or products which are furnished by Owner; such work requires coordination with the Work of this Contract and may require installation by the Construction Manager.
- B. The Construction Manager has coordinating responsibility for Testing laboratory services as identified under Section 01 45 29 - TESTING LABORATORY SERVICES and as specified under individual specification sections.

#### 1.8 PRODUCT DELIVERY AND HANDLING REQUIREMENTS

- A. Transport and handle products in accordance with manufacturer's instructions and as specified in individual specification sections.
  1. Packing: Arrange for the return of packing materials, such as wood pallets, where economically feasible.
  2. Ductwork: As a prerequisite requirement for Massachusetts CHPS, all ductwork shall be sealed from time of manufacturer, with seals intact upon delivery to construction site, and remain so, until ready for installation. Construction Manager is jointly responsible with Trade Contractor to ensure ducts are properly sealed and maintained.
    - a. Store ductwork in clean dry conditions and keep sealed while it is stored.
- B. Packaging: Deliver materials in recyclable or in reusable packaging such as cardboard, wood, paper, or reusable blankets, which will be reclaimed by supplier or manufacturer for recycling.
  1. General: Minimize packaging materials to maximum extent possible while still ensuring protection of materials during delivery, storage, and handling.
    - a. Unacceptable Packaging Materials: Polyurethane, polyisocyanurate, polystyrene, polyethylene, and similar plastic materials such as "foam" plastics and "shrink-fit" plastics.
    - b. Reusable Blankets: Deliver and store materials in reusable blankets and mats reclaimed by manufacturers or suppliers for reuse where program exists or where program can be developed for such reuse.
      - 1) Non-returnable containers should be donated to local and community organizations to the greatest extent possible to reduce quantity of disposed materials.
    - c. Pallets: Where pallets are used, suppliers shall be responsible to ensure pallets are removed from site for reuse or for recycling. Avoid use of virgin wood pallets whenever possible. It is preferable that pallets be manufactured from recycled wood and recycled plastic.
    - d. Corrugated Cardboard and Paper: Where paper products are used, recycle as part of construction waste management recycling program, or return to material's manufacturer for use by manufacturer or supplier.
    - e. Sealants, Paint, Primers, Adhesives, and Coating Containers: Return to supplier or manufacturer for reuse where such program is available.
  2. Purchase materials in bulk where possible. Take measures to avoid individual packaging for volume purchases.

- C. Labeling of plastics used for packaging: Plastic is marked by manufacturers for type of plastic material in accordance with the Society of Plastic resin codes. Maintain marks, or sort by manufacturer's resin codes for recycling purposes.
  - 1. Type 1: Polyethylene Terephthalate (PET, PETE).
  - 2. Type 2: High Density Polyethylene (HDPE).
  - 3. Type 3: Vinyl (Polyvinyl Chloride or PVC).
  - 4. Type 4: Low Density Polyethylene (LDPE).
  - 5. Type 5: Polypropylene (PP).
  - 6. Type 6: Polystyrene (PS).
  - 7. Type 7: Other. Use of this code indicates that the package in question is made with a resin other than the six listed above, or is made of more than one resin listed above, and used in a multi-layer combination.
- D. Schedule deliveries to avoid delays in installation of products, to minimize long-term storage, to prevent overcrowding of construction spaces and to limit potential damage to stored materials. Coordinate with installation to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft and other losses.
- E. Promptly inspect shipments to assure that products comply with requirements, quantities are correct, and products are undamaged.
- F. Provide equipment and personnel to handle and store products by methods to prevent soiling, disfigurement, or damage.

#### 1.9 PRODUCT STORAGE AND PROTECTION REQUIREMENTS

- A. Store and protect products in accordance with manufacturer's instructions and as specified in individual specification sections.
  - 1. Provide all necessary equipment and personnel to store products by methods to prevent soiling, disfigurement and damage.
  - 2. Avoid excessive material handling and potential product damage, locate storage areas convenient to work areas.
  - 3. Store and protect products with seals and labels intact and legible.
  - 4. Store and handle materials in a manner as to prevent loss from weather and other damage.
- B. For exterior storage of fabricated products, place on sloped supports, above ground.
- C. Provide off-site storage and protection when site does not permit on-site storage or protection.
  - 1. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to avoid condensation.
  - 2. Store sensitive products in weather-tight, climate controlled enclosures.
  - 3. Prevent contact with material that may cause corrosion, discoloration, or staining.

- D. Store loose granular materials on solid flat surfaces in a well-drained area; prevent mixing with foreign matter.
- E. Arrange storage of products to permit access for inspection. Periodically inspect to assure products are undamaged and are maintained under specified conditions.
- F. Store heavy materials in locations and in a manner that will not damage or disfigure existing, or new construction.

#### 1.10 MOLD PROTECTION

- A. General:
  - 1. Keep building materials dry to prevent the growth of mold and bacteria, including, but not limited to: gypsum wallboard, wood, porous insulation, paper, and fabric.
  - 2. Cover materials to prevent rain damage, and if resting on the ground, use spacers to allow air to circulate between the ground and the materials.
  - 3. Thoroughly dry all water damaged materials within 24 hours from time of moisture damage. Materials that have been damp or wet for more than 24 hours shall be jointly reviewed by Construction Manager and Architect, or Owner's Project Manager to determine whether damp/wet materials need to be disposed.
    - a. Review moisture damaged materials for signs of mold and mildew, including any with moisture stains, from the site and properly dispose of them.
    - b. Replace water damaged and moldy materials with new, undamaged materials.

#### 1.11 CONSTRUCTION WASTE MANAGEMENT

- A. Source separation: Separate, store, protect, and handle at the site identified recyclable and salvageable waste products in order to prevent contamination of materials and to maximize recyclability and salvageability of identified materials. Refer to the Waste Management Requirements Plan specified under Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL.
- B. Return: Set aside and protect incorrectly delivered and substandard products and materials and return to supplier for credit.
- C. Recycling: Arrange for timely pickups from the site or deliveries to recycling facility in order to prevent contamination of recyclable materials. Refer to the Waste Management Requirements and Plan specified under Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL.

**PART 2 - PRODUCTS** (Not Used)

THIS PAGE INTENTIONALLY LEFT BLANK**

## **SECTION 017300 - EXECUTION**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.

#### **1.2 SUMMARY**

- A. This Section includes general procedural requirements governing execution of the Work including, but not limited to, the following:
  - 1. Construction layout.
  - 2. Field engineering and surveying.
  - 3. General installation of products.
  - 4. Coordination of Owner-installed products.
  - 5. Progress cleaning.
  - 6. Starting and adjusting.
  - 7. Protection of installed construction.
  - 8. Correction of the Work.
- B. Related Sections include the following:
  - 1. Division 01 Section "Project Management and Coordination" for procedures for coordinating field engineering with other construction activities.
  - 2. Division 01 Section "Cutting and Patching" for procedural requirements for cutting and patching necessary for the installation or performance of other components of the Work.

### **PART 2 - PRODUCTS (Not Used)**

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Existing Conditions: The existence and location of site improvements, utilities, and other construction indicated as existing are not guaranteed. Before beginning work, investigate and verify the existence and location of mechanical and electrical systems and other construction affecting the Work.
  - 1. Before construction, verify the location and points of connection of utility services.
- B. Acceptance of Conditions: Examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
  - 1. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

2. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
3. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
4. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

### 3.2 PREPARATION

- A. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- B. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.
- C. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to Architect. Include a detailed description of problem encountered, together with recommendations for changing the Contract Documents.

### 3.3 CONSTRUCTION LAYOUT

- A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect **and Owner's Project Manager** promptly.
- B. General: Engage a **professional engineer** to lay out the Work using accepted surveying practices.
  1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
  2. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
  3. Inform installers of lines and levels to which they must comply.
  4. Check the location, level and plumb, of every major element as the Work progresses.
  5. Notify Architect **and Owner's Project Manager** when deviations from required lines and levels exceed allowable tolerances.
  6. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.
- C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and invert elevations.
- D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.
- E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect **and Owner's Project Manager**.

3.4 FIELD ENGINEERING

- A. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.
  - 1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect **or Owner's Project Manager**. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect **and Owner's Project Manager** before proceeding.
  - 2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.
- B. Benchmarks: Establish and maintain a minimum of **two (2)** permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.
  - 1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
  - 2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
  - 3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

3.5 INSTALLATION

- A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
  - 1. Make vertical work plumb and make horizontal work level.
  - 2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
  - 3. Conceal pipes, ducts, and wiring in finished areas, unless otherwise indicated.
  - 4. Maintain minimum headroom clearance of **10 feet** in spaces without a suspended ceiling.
- B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.
- C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.
- D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.
- E. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.
- F. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.
- G. Anchors and Fasteners: Provide anchors and fasteners as required to anchor each component securely in place, accurately located and aligned with other portions of the Work.
  - 1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.

2. Allow for building movement, including thermal expansion and contraction.
  3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- H. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- I. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

### 3.6 OWNER-INSTALLED PRODUCTS

- A. Site Access: Provide access to Project site for Owner's construction forces.
- B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction forces.
1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
  2. Preinstallation Conferences: Include Owner's construction forces at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction forces if portions of the Work depend on Owner's construction.

### 3.7 PROGRESS CLEANING

- A. General: Clean Project site and work areas daily, including common areas. Coordinate progress cleaning for joint-use areas where more than one installer has worked. Enforce requirements strictly. Dispose of materials lawfully.
1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
  2. Do not hold materials more than 7 days during normal weather or 3 days if the temperature is expected to rise above 80 deg F.
  3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
- B. Site: Maintain Project site free of waste materials and debris.
- C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.
1. Remove liquid spills promptly.
  2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.
- D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

- E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.
- F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.
- G. Waste Disposal: Burying or burning waste materials on-site will not be permitted. Washing waste materials down sewers or into waterways will not be permitted.
- H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.
- I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
- J. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

### 3.8 STARTING AND ADJUSTING

- A. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.
- B. Adjust operating components for proper operation without binding. Adjust equipment for proper operation.
- C. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Manufacturer's Field Service: If a factory-authorized service representative is required to inspect field-assembled components and equipment installation, comply with qualification requirements in Division 01 Section "Quality Requirements."

### 3.9 PROTECTION OF INSTALLED CONSTRUCTION

- A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.
- B. Comply with manufacturer's written instructions for temperature and relative humidity.

### 3.10 CORRECTION OF THE WORK

- A. Repair or remove and replace defective construction. Restore damaged substrates and finishes. Comply with requirements in Division 01 Section "Cutting and Patching."
  - 1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.
- B. Restore permanent facilities used during construction to their specified condition.

- C. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.
- D. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.
- E. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

**END OF SECTION 017300**

## SECTION 017329 - CUTTING AND PATCHING

### PART 1 - GENERAL

#### 1.1 RELATED DOCUMENTS

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.

#### 1.2 SUMMARY

- A. This Section includes procedural requirements for cutting and patching.
  - 1. Divisions 02 through 49 Sections for specific requirements and limitations applicable to cutting and patching individual parts of the Work.
  - 2. Division 07 Section "Penetration Firestopping" for patching fire-rated construction.

#### 1.3 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of other Work.
  - 1. Cutting round holes six (6) inches in diameter or less, or square or rectangular holes 8 x 8 inches or less, in existing assemblies is the work of the trade proposing using the hole or opening.
  - 2. Larger openings or holes shall be coordinated with the installer of the assembly being cut who shall cut, and reinforce or frame the opening or hole so that an effective patch can be made.
- B. Patching: Fitting and repair work required to restore surfaces to original conditions after installation of other Work.

#### 1.4 QUALITY ASSURANCE

- A. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or load-deflection ratio.
- B. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.
  - 1. Primary operational systems and equipment.
  - 2. Air or smoke barriers.

3. Fire-suppression systems.
  4. Mechanical systems piping and ducts.
  5. Control systems.
  6. Communication systems.
  7. Conveying systems.
  8. Electrical wiring systems.
  9. Operating systems of special construction in Division 13 Sections.
- C. Miscellaneous Elements: Do not cut and patch miscellaneous elements or related components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.
1. Water, moisture, or vapor barriers.
  2. Membranes and flashings.
  3. Exterior curtain-wall construction.
  4. Equipment supports.
  5. Piping, ductwork, vessels, and equipment.
  6. Noise- and vibration-control elements and systems.
- D. Visual Requirements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch construction exposed on the exterior or in occupied spaces in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
- E. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. General: Comply with requirements specified in other Sections.
- B. In-Place Materials: Use materials identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
1. If identical materials are unavailable or cannot be used, use materials that, when installed, will match the visual and functional performance of in-place materials.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine surfaces to be cut and patched and conditions under which cutting and patching are to be performed.
  - 1. Compatibility: Before patching, verify compatibility with and suitability of substrates, including compatibility with in-place finishes or primers.
  - 2. Proceed with installation only after unsafe or unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Temporary Support: Provide temporary support of Work to be cut.
- B. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
- C. Adjoining Areas: Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.

### 3.3 PERFORMANCE

- A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
  - 1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.
- B. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
  - 1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots as small as possible, neatly to size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
  - 2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
  - 3. Concrete & Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
  - 4. Excavating and Backfilling: Comply with requirements in applicable Division 31 Sections where required by cutting and patching operations.

5. Proceed with patching after construction operations requiring cutting are complete.
- C. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as possible. Provide materials and comply with installation requirements specified in other Sections.
1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate integrity of installation.
  2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.
    - a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    - b. Restore damaged pipe covering to its original condition.
  3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
    - a. Where patching occurs in a painted surface, apply primer and intermediate paint coats over the patch and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.
  4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
  5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition.
- D. Cleaning: Clean areas and spaces where cutting and patching are performed. Completely remove paint, mortar, oils, putty, and similar materials.

END OF SECTION 017329

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

SECTION 01 74 19  
CONSTRUCTION WASTE MANAGEMENT

PART 1 - GENERAL

1.01 PROVISIONS INCLUDED

- A. The Conditions of the Contract and Division 1, General Requirements, apply to the work under this Section.
- B. Attention of the Contractor and this Subcontractor is drawn to provisions of the Contract Documents regarding the responsibility of all bidders to visit and inspect the site, including the existing building, and to base all bids on conclusions drawn from such inspections.

1.02 SCOPE OF WORK

- A. This Section specifies administrative and procedural requirements for the Contractor's implementation of waste management controls and systems for the duration of the Work.
  - 1. Masonry subcontractor is responsible for waste management of masonry work.
  - 2. Roofing and flashing subcontractor is to be responsible for waste management of roofing and flashing work.
- B. Develop and implement a waste management plan compliant with the requirements of LEED-S v4 MR prerequisite Construction and Demolition Waste Management Planning and MR credit Construction and Demolition Waste Management.

1.03 INTENT

- A. Sustainable Design Intent: Comply with project requirements intended to achieve certification, measured and documented according to the LEED v4 Green Building Rating System, of the US Green Building Council.
- B. The Owner and Architect have established that this Project shall generate the least amount of waste practical and that processes that ensure the generation of as little waste as possible due to error, poor planning, breakage, mishandling, contamination, or other factors shall be employed.
- C. Of the waste that is generated, as many of the waste materials as economically feasible shall be reused, salvaged, or recycled. Waste disposal in landfills shall be minimized to the greatest extent practical.
- D. With regard to these goals the Contractor shall develop, for the Architect's review, a Waste Management Plan for this Project.
  - 1. Each Subcontractor shall be responsible for segregating his own waste into different dumpsters as directed by the Contractor. OR C + D waste materials will be collected on site in commingled containers and sorted off site.
  - 2. Contractor shall be responsible for ensuring that debris will be disposed of at appropriately designated licensed solid waste disposal facilities, as defined by MGL Chapter 111, Section 150A.

#### 1.04 SUBMITTALS

A. Waste Management Plan: Within 21 calendar days after receipt of Notice to Proceed, the Contractor shall provide a compliant Construction Waste Management Plan including:

- Identify a minimum of five materials target for diversion, (structural and non-structural).
- Determine and document the estimated percentage of the overall waste that these materials represent. Divert 75% and Four Material Streams REQUIRED.
- Document if these materials will be site separated or commingled and sorted off site.
- Describe the diversion strategies.
- Identify the locations as to where the materials will be taken include recycling facilities, sorting facilities and landfills. Include the following:
  - Landfill Options: The name of the landfills where the non-recyclable Construction and Demolition waste will be taken to be disposed of, applicable tipping fees and the projected cost of disposing of the Project waste in landfills
  - Off-Site Sorting: The name of off site sorting facilities to receive commingled demolition and construction debris collected in mixed materials containers on site.
  - If sorted off site identify the sorting facilities and how the materials will be processed

NOTE: Alternative daily cover (ADC) does not qualify as material diverted from disposal. Land-clearing debris is not considered construction, demolition, or renovation waste that can contribute to waste diversion.

B. Landfill Certification: Provide a statement of verification that the landfills proposed for use are licensed for types of waste to be deposited and have sufficient capacity to receive the estimated waste from this project

C. For co-mingled materials collected in mixed containers on site and sorted off-site the following documentation must be provided:

1. For each container: A detailed breakdown of the weight of each material after sorting, including materials diverted to landfills
2. AND/OR Provide the sorting facilities annual average recycling rate for EACH facility where off-site sorting takes place. Additionally, provide documentation that the facility is State regulated.

NOTE: Co-mingled waste may be considered only one material stream unless the facility can provide diversion rates for specific materials.

D. Recycled, and Salvaged Materials: Provide a list of each materials proposed to be recycled, salvaged or diverted from landfill during the course of the Project. Include anticipated volumes for a minimum of five of the following and any additional items:

1. Cardboard and paper
  2. Clean dimensional Wood (free from nails and screws, etc)
  3. Concrete and slurry wall materials
  4. Brick/Masonry
  5. Asphalt
  6. Metals including framing, banding, stud trim, ductwork, piping, rebar, roofing, other trim, steel, iron, galvanized sheet steel, stainless steel, aluminum, copper, zinc, lead, brass, and bronze.
  7. Gypsum Board
  8. Mechanical and Electrical equipment
  9. Building components that are removed intact during demolition
  10. Glass
  11. Packing materials
  12. Beverage Containers
- E. Meetings: A description of the regular meetings to be held to address waste management
- F. Procedures for Materials Handling: Provide a description of the means by which any waste materials and/or collection containers identified above will be protected from contamination, and a description of the means to be employed in recycling the above materials consistent with requirements for acceptance by designated facilities.
- G. Transportation: Provide a description of the means of transportation of the recyclable materials identify if materials will be site-separated and self-hauled to designated centers, or whether mixed materials will be collected by a waste hauler and removed from the site for off-site sorting
- H. Waste Management Progress Reports to be submitted concurrent with each monthly Application for Payment. Provide a written Waste Management Progress Report and updated tracking spreadsheet
- I. Waste Management Final Report: Prior to Substantial Completion, submit a written Waste Management Final Report summarizing the types and quantities of materials recycled and disposed of under the Waste Management Plan. Include the name and location of disposal facilities. Quantity may be measured by either weight or volume; be consistent in calculations. Include the following:
1. Material category.
  2. Generation point of waste.
  3. Total quantity of waste, by weight.
  4. Quantity of waste salvaged, both estimated and actual.
  5. Quantity of waste recycled, both estimated and actual.
  6. Total quantity of waste recovered (salvaged plus recycled).
  7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.
- J. Other Submittals:
1. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.

2. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.
3. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
4. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

#### 1.05 CONTRACTORS

- A. Contractor may subcontract work of this Section to a sub-contractor specializing in recycling and salvaging of construction waste.
  1. Institution Recycling Network, 7 South State Street, Suite 2, Concord, NH 03301; tel. 866-229-1962
  2. Waste Solutions, Inc., 965 Plain Street, Marshfield, MA 02050; tel. 781-844-1476
  3. Eco-One Solutions, 18 Glenwood Street, Natick MA, 01760; tel. 978.270.8950
  4. Or equal as approved by the Architect.
- B. Gypsum Wallboard Recycling: New, paper-faced gypsum wallboard scrap (cuts from construction - not demolition waste) generated at project shall be recycled by Gypsum Recycling America, LLC. Keep scrap dry. Contact Gypsum Recycling America at 1.866.9.GYPSUM (1.866.949.7786) or [jw@gypsumrecycling.us](mailto:jw@gypsumrecycling.us), to coordinate recycling efforts.
- C. Acoustical Ceiling Panel Recycling: Demolition and construction waste pulpable mineral fiber ceiling panels may be recycled by Armstrong World Industries. Contact Armstrong at 1-877-ARMSTRONG (1-877-276-7876) or visit [www.armstrong.com](http://www.armstrong.com) to coordinate recycling efforts, apply for product approvals, and receive reclamation procedure requirements.

#### PART 2 - PRODUCTS

Not Used.

#### PART 3 - EXECUTION

##### 3.01 RECYCLING

- A. Metal, including but not limited to aluminum stairs, structural beams and sections, and reinforcing steel shall be recycled.
- B. Wood that is not painted and does not contain preservatives (i.e. creosote, arsenic, and chromium-containing preservatives) shall be segregated and recycled.
- C. Refer to the Massachusetts Recycling Directory available at the Massachusetts State Bookstore (617-727-2834) in the State Capitol Building for recycling operations within the State.

### 3.02 WASTE MANAGEMENT PLAN IMPLEMENTATION

- A. Manager: The Contractor shall designate an on-site person responsible for instructing workers and overseeing and documenting results of the Waste Management Plan for the Project
- B. Distribution: The Contractor shall distribute copies of the Waste Management Plan to the Job Site Foreman, each Subcontractor, the Owner and the Architect.
- C. Instruction: The Contractor shall provide on-site instruction of appropriate separation, handling, and recycling, salvage, reuse, and return methods to be used by all parties at the appropriate stages of the Project
- D. Separation Facilities: The Contractor shall lay out and label a specific area to facilitate separation of materials for recycling, salvage, reuse, and return. Recycling and waste bin areas are to be kept neat and clean and clearly marked in order to avoid contamination of materials. Location shall be acceptable to the Architect.
- E. Hazardous Wastes: Any unforeseen hazardous wastes shall be separated, stored, and disposed of according to local regulations and as directed by the Owner.

END OF SECTION 01 74 19

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

---

Section 01 75 00  
STARTING AND ADJUSTING

**PART 1 - GENERAL**

1.1 SUMMARY

- A. Testing, adjusting, and balancing.
- B. Operation, maintenance, and service.

1.2 RELATED REQUIREMENTS

- A. Section 01 91 13 – GENERAL COMMISSIONING REQUIREMENTS.

1.3 TESTING, ADJUSTING, AND BALANCING

- A. General: Adjust operating products and equipment to ensure smooth and unhindered operation.
  - 1. Construction Manager is advised that testing and balancing agents may be required during commissioning activities as specified in Section 01 91 13 – GENERAL COMMISSIONING REQUIREMENTS, or as may be additionally directed by Architect.
- B. Trade Contractors under Division 21 – Fire Suppression, Division 22 – Plumbing and Division 23 – Heating, Ventilating and Air Conditioning are all responsible for primary system testing and balancing as specified under their respective Sections. Construction Manager will be required to coordinate these services.
- C. Construction Manager and Trade Contractors (Division 21 – Fire Suppression, Division 22 – Plumbing and Division 23 – Heating, Ventilating and Air Conditioning) are jointly responsible and required to provide assistance to the Owner's independent Commissioning agent as specified under Section 01 91 00 – GENERAL COMMISSIONING.
- D. The independent firm will perform services specified under Division 21 - Fire Suppression, Division 22 - Plumbing, and Division 23 - Heating, Ventilating, and Air Conditioning.
- E. Reports will be submitted by the independent firm to the Architect indicating observations and results of tests and indicating compliance or non-compliance with specified requirements and with the requirements of the Contract Documents.

1.4 AIR QUALITY TESTING

- A. Air quality testing: The Owner reserves the right to employ the services of an independent testing agency to perform air quality testing. Testing will occur prior to Construction Manager's request for inspection for Substantial Completion. The intent of testing is to certify that the building is "Clear" of airborne contaminants.

1.5 OPERATION, MAINTENANCE, AND SERVICE

- A. Coordinate schedule for start-up of various equipment and systems.

- B. Notify Architect/Engineer and Owner 7 days prior to start-up of each item.
- C. Verify that each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, or other conditions which may cause damage.
- D. Verify that tests, meter readings, and specified electrical characteristics agree with those required by the equipment or system manufacturer.
- E. Verify wiring and support components for equipment are complete and tested.
- F. Execute start-up under supervision of responsible Construction Managers' personnel in accordance with manufacturers' instructions.
- G. When specified in individual specification Sections, require manufacturer to provide authorized representative to be present at site to inspect, check and approve equipment or system installation prior to start-up, and to supervise placing equipment or system in operation.
- H. Submit a written report in accordance with Section 01 77 00 - CLOSEOUT PROCEDURES that equipment or system has been properly installed and is functioning correctly.

**PART 2 - PRODUCTS** (Not Used)

**PART 3 - EXECUTION** (Not Used)

End of Section

## **SECTION 017700 - CLOSEOUT PROCEDURES**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.

#### **1.2 SUMMARY**

- A. This Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:
  - 1. Inspection procedures.
  - 2. Warranties.
  - 3. Final cleaning.
- B. Related Sections include the following:
  - 1. Division 01 Section "Payment Procedures" for requirements for Applications for Payment for Substantial and Final Completion.
  - 2. Division 01 Section "Execution" for progress cleaning of Project site.
  - 3. Division 01 Section "Project Record Documents" for submitting Record Drawings, Record Specifications, and Record Product Data.
  - 4. Division 01 Section "Operation and Maintenance Data" for operation and maintenance manual requirements.
  - 5. Division 01 Section "Demonstration and Training" for requirements for instructing Owner's personnel.
  - 6. Division 01 Section "General Commissioning Requirements" for requirements for Commissioning Plan.
  - 7. Divisions 02 through 49 Sections for specific closeout and special cleaning requirements for the Work in those Sections.

#### **1.3 SUBSTANTIAL COMPLETION**

- A. Preliminary Procedures: Before requesting inspection for determining date of Substantial Completion, complete the following. List items below that are incomplete in request.
  - 1. Prepare a list of items to be completed and corrected (punch list), the value of items on the list, and reasons why the Work is not complete. Provide punch list on an Excel spreadsheet.

2. Advise Owner of pending insurance changeover requirements.
  3. Submit specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
  4. Obtain and submit releases permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
  5. Prepare and submit Project Record Documents.
  6. Deliver tools, spare parts, extra materials, and similar items to location designated by Owner. Label with manufacturer's name and model number where applicable.
  7. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
  8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
  9. Advise Owner of changeover in heat and other utilities.
  10. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
  11. Complete final cleaning requirements, including touchup painting.
  12. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.
- B. Inspection: Submit a written request for inspection for Substantial Completion. On receipt of request, Architect, and Owner's Project Manager will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.
1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
  2. Results of completed inspection will form the basis of requirements for Final Completion.

#### **1.4 FINAL COMPLETION**

- A. Preliminary Procedures: Before requesting final inspection for determining date of Final Completion, complete the following:
1. Submit a final Application for Payment according to Division 01 Section "Payment Procedures."
  2. Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Architect. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
  3. Submit evidence of final, continuing insurance coverage complying with insurance requirements.

4. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training videotapes.
- B. Inspection: Submit a written request for final inspection for acceptance. On receipt of request, Architect and Owner's Project Manager will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.
  1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

### **1.5 LIST OF INCOMPLETE ITEMS (PUNCH LIST)**

- A. Preparation: Submit six 6 copies of list. Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.
  1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor then roof.
  2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
  3. Include the following information at the top of each page:
    - a. Project name.
    - b. Date.
    - c. Name of Architect and Owner's Project Manager.
    - d. Name of Contractor.
    - e. Page number.

### **1.6 WARRANTIES**

- A. Submittal Time: Submit written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.
- B. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.
  1. Bind warranties and bonds in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8- 1/2-by-11-inch paper.
  2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed

- description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.
- C. Provide additional copies of each warranty to include in operation and maintenance manuals.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

## **PART 3 - EXECUTION**

### **3.1 FINAL CLEANING**

- A. General: Provide final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
- B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:
    - a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
    - b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
    - c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
    - d. Remove tools, construction equipment, machinery, and surplus material from Project site.
    - e. Remove snow and ice to provide safe access to building.
    - f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid

- disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
- g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
  - h. Sweep concrete floors broom clean in unoccupied spaces.
  - i. Vacuum carpet and similar soft surfaces, removing debris and excess nap; shampoo if visible soil or stains remain.
  - j. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.
  - k. Remove labels that are not permanent.
  - l. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.
    - 1) Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.
  - m. Wipe surfaces of mechanical and electrical equipment, elevator equipment and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
  - n. Replace parts subject to unusual operating conditions.
  - o. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
  - p. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
  - q. Clean ducts, blowers, and coils if units were operated without filters during construction.
  - r. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.
  - s. Leave Project clean and ready for occupancy.
- C. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on Owner's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove waste materials from Project site and dispose of lawfully.

**END OF SECTION 017700**

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

---

Section 01 78 00  
CLOSEOUT SUBMITTALS

**PART 1 - GENERAL**

1.1 SECTION INCLUDES

- A. Project Record Documents.
- B. Record Project Manual.
- C. Project Record Drawings (As built drawings).
- D. Project Record Submittals.
- E. Final Site Survey.
- F. Operation and maintenance data, preventive maintenance instructions.
- G. Materials and finishes manual.
- H. Maintenance contracts.
- I. Spare parts and maintenance materials.

1.2 RELATED REQUIREMENTS

- A. Section 01 31 00 - PROJECT MANAGEMENT AND COORDINATION:
  - 1. Coordination Drawing Requirements.
  - 2. Electronic file requirements for base sheets to prepare Project Record Drawings (As-built drawings).
- B. Section 01 33 29 - SUSTAINABLE DESIGN REPORTING: Special administrative and procedure requirements related to the Owner's *LEED v4, LEED for Building Design and Construction, LEED BD+C: Schools* rating system certificate goals of energy conservation and efficiency, indoor air quality, and natural resource efficiency.
- C. Section 01 60 00 - PRODUCT REQUIREMENTS: Listing of VOC requirements for adhesives, cleaning/maintenance materials, paints, coatings, and sealants.
- D. Section 01 74 19 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL: Procedural and administrative requirements for construction and demolition recycling.
- E. Section 01 78 36 – WARRANTIES: Administrative and procedural requirements for warranties, guarantees and bonds.

1.3 PROJECT RECORD DOCUMENTS

- A. General: Record documents shall reflect actual "as-built" condition and the products installed. Include all changes and deviations from original Contract Documents, and incorporate information from:
  - 1. Original Contract Documents.
  - 2. Addenda.

3. Change orders.
  4. Construction change directives.
  5. Field directives, and instructions from the Owner, Architect or regulatory authorities having jurisdiction.
- B. Project Record Documents include, but are not limited to:
1. Record Project Manual.
  2. Project record drawings (as built drawings).
  3. Project record submittals.
  4. Final Site Survey.
  5. Operation and maintenance data, preventive maintenance instructions.
  6. Materials and finishes manual.
  7. Product warranties and bonds.
  8. Maintenance contracts.
  9. Record of all test reports and inspections.
  10. Wall charts and data such as valve diagrams, electrical panel board directories, and similar information.
  11. Organized, complete testing results for the entire project as submitted to the City of Worcester Building Department
- C. Labeling and identification of Record Documents
1. Clearly label all record documents with name of Project and the words "Record Document".
  2. Date progressive entries of information as appropriate.
  3. Date Record Documents with the final submission date.
  4. All electronic records shall be similarly organized.

#### 1.4 SUBMITTAL QUANTITY REQUIREMENTS

- A. Furnish Architect with the following quantities of each submittal:
1. Record Project Manual: 3 bound copies and 5 electronic versions.
  2. Project Record Drawings (as-builts):
    - a. 5 sets of Drawings in Autodesk Revit®, Autodesk AutoCad® and Portable Document Format (PDF) format. Verify release version and disc type with Owner prior to submittal.
    - b. 3 "blackline print" sets of Drawings.
  3. Project Record Submittals: Provide a DVD or portable media including USB flash drive with all submittals arranged into Divisions, specification sections, and submittal titles.
  4. Final Site Survey: 5 copies.
  5. Operation and maintenance data, preventive maintenance instructions: 3 bound copies and 5 electronic versions.
  6. Owner Training Video for operation of building systems and major equipment: 5 copies.

7. Materials and finishes manual: 3 bound copies and 5 electronic versions.
8. Product warranties and bonds: 3 bound copies and 5 electronic versions.
9. Maintenance contracts: 3 bound copies and 5 electronic versions.
10. Record of all test reports and inspections including code sign off drawings and permits: 3 bound copies and 5 electronic versions.

#### 1.5 RECORD PROJECT MANUAL

- A. The Construction Manager is responsible to maintain a Project Manual reflecting revisions and changes to the Original Issue Project Manual.
  1. Clearly label the Record Project Manual as "Record Document Specifications, in a three ring binder.
  2. Do not use Record Project Manual for construction purposes; protect from loss in a secure location.
  3. Record all variations and deviations to the Contract Documents, including changes made by Addenda, Bulletin, Change Order, Change Directive and other modifications to the Contract..
    - a. Cut and paste revisions into their applicable specification section.
    - b. Identify all changes with cross-reference to appropriate Addendum Number, Modification Number, Change Order Number etc.
  4. In each individual Specification Section, under "*Part 2 – Products*", identify all manufacturers and products which are actually used as part of the Work.
  5. Give particular attention to concealed elements that would be difficult to measure and record at a later date.
- B. Record Project Manual: Provide prior to request for Final Acceptance.
  1. Manuals shall be in 8-1/2 by 11 inch pages and bound in 3-ring (D-shape) binders with durable plastic covers. Internally subdivide the binder contents by Division with permanent page dividers.
  2. Label front cover and spine of each binder with laser printed titles, dates, and project information.
  3. All information from "in-progress" manual shall be clearly and completely transferred.
  4. Pages shall be undamaged.
  5. Provide 3 bound copies and 5 electronic versions on media acceptable to the City of Worcester.

#### 1.6 PROJECT RECORD DRAWINGS

- A. The Construction Manager is responsible to maintain a clean, undamaged set of blue or black line prints of Contract Drawings and shop drawings for preparing the record drawings.
  1. Where shop drawings are used, record a cross-reference at the corresponding location on the Contract Documents.
  2. Site Drawings maintained by the Construction Manager and all trades, the coordination drawings file, and other field documents shall be used in preparing the electronic as-built drawings and documents.

3. Construction Manager to compile all trade sets to one organized final file/submission.
- B. Do not use Record Documents for construction purposes; protect from loss in a secure location. Mark-up these drawings to show clearly and completely the actual installation reflecting all changes made in the Work during construction.
  1. Mark whichever drawing is most capable of showing conditions accurately.
  2. Record all variations and deviations to the Contract Documents, including changes made to schedules, details, and all architectural changes to structure, exterior enclosure, interior partitions and ceilings.
  3. Record new information that is important to the Owner, but was not shown on the Contract Drawings or shop drawings.
  4. Give particular attention to concealed elements that would be difficult to measure and record at a later date.
- C. The food service, fire protection, plumbing, mechanical and electrical trades shall be responsible to the Construction Manager to keep the record documents for their portions of the work marked currently to record all changes in the mechanical and electrical work made during construction.
- D. The Architect may periodically inspect these record drawings, and their proper maintenance may be a condition precedent to approval of applications for periodic payments.
- E. Deliver all Project Record Documents, shop drawings, product data, and samples to the Architect for the Owner's use, upon completion of the Work and prior to request for Final Acceptance of the Work.
- F. In addition at the completion of the work, the Construction Manager is responsible for the preparation and submittal of neat, clean well drafted, and complete record drawings, at no additional costs to the Owner. These reproducible Project Record Documents shall be transmitted to the Architect as a condition precedent to final payment, and include documents prepared by the food service, fire protection, plumbing, mechanical and electrical trades.

#### 1.7 FINAL SITE SURVEY

- A. Under provisions of Section 01 73 00 - EXECUTION, Surveyor shall provide final corrected submission of Final Site Survey (As-built property survey) after work has been completed.
  1. Final site survey shall show significant features for the Project. Include a certification, signed by the surveyor, to the effect that metes, bounds, lines and levels of the Project are accurately positioned as shown on the survey.
- B. Survey format shall be in accordance with requirements of the authorities having jurisdiction, and show the following as a minimum:
  1. Property boundaries.
  2. All required legal descriptions.
  3. Bench marks.
  4. Completed foundation work.

5. Building extremities.
  6. Pad mounted equipment.
  7. All paving work.
  8. Revisions to wetland areas.
  9. Easements and modifications to easements.
  10. Underground utilities and all changes in existing utilities.
- C. Record deviations from required lines and levels. Advise the Architect when deviations that exceed indicated or recognized tolerances are detected. On Final Site Survey, record deviations that are accepted and not corrected.
- D. Submit signed, sealed and certified copies shall be provided to the architect's office for review prior to filing with authorities having jurisdiction. Ensure information is complete, accurate submitted in a timely fashion.
1. Recording: At Substantial Completion, have the final survey recorded by or with local authorities as the official "Property Survey".

#### 1.8 OPERATION AND MAINTENANCE MANUALS

- A. General: Coordinate content and submission requirements of operation and maintenance manuals with Owner's Commissioning Agent.
- B. Prepare data in the form of an instructional manual. Furnish separate manuals for each of the following groups of equipment:
1. Food service equipment.
  2. Elevators.
  3. Special equipment and systems.
  4. Fire protection system.
  5. Utilities and plumbing systems.
  6. Heating, ventilation and air conditioning system.
  7. Electrical systems.
- C. Furnish bound and properly identified Manuals prior to request for Final Acceptance.
1. Manuals shall be in 8-1/2 by 11 inch pages and bound in three "D ring" capacity binders with durable plastic covers. Internally subdivide the binder contents with permanent page dividers.
    - a. Arrange content by section number and systems, process flow, under section numbers and sequence as listed in the Table of Contents of this Project Manual.
    - b. Drawings: Preferable 11 inches in height bound in with text with reinforced punched binder tab. Fold drawings larger than 8-1/2 by 11 inches to size of text pages. Provide a drawing pocket for Drawings larger than 11 by 17 inches; locate pocket inside rear cover or bound in with text.
  2. Each manual shall include the same following minimum information:
    - a. Table of Contents.

- b. Directory of Construction Manager, Trade Contractors, subcontractors, and major equipment supplies listing addresses, phone numbers and appropriate emergency phone numbers.
      - 1) Include local sources of supplies and replacement parts.
    - c. Directory of Architect and consultants listing addresses and phone numbers.
    - d. Operation and maintenance instructions. Provide schematic diagrams of control systems, circuit directories for each electric panel and charts showing the tagging of all valves.
    - e. Air and water test and balancing reports.
    - f. Maintenance and cleaning instructions for finishes.
    - g. Product and manufacturer's Certificates.
    - h. Photocopies of all extended warranties and bonds.
  - 3. Submit one copy of completed volume in final form 21 days prior to Final Inspection. This copy will be returned after final inspection with Architect's comments; Revise and submit all volumes to Owner.
- D. For each item of equipment, include description of equipment, component parts and accessories. Identify function, normal operating characteristics, and limiting conditions. Include performance curves, with engineering data and tests, and complete nomenclature and commercial number of replaceable parts. Additionally provide the following for each item:
- 1. Panelboard circuit directories: Provide electrical service characteristics, controls and communications.
  - 2. Include color coded wiring diagrams as installed.
  - 3. Operating procedures: Include start-up, break-in, and routine normal operating instructions and sequences. Include regulation, control, stopping, shut-down, and emergency instructions. Include summer, winter, and any special operating instructions.
  - 4. Maintenance requirements: Include routine procedures and guide for trouble-shooting; disassembly, repair, and re-assembly instructions; alignment, adjusting, balancing, and checking instructions.
    - a. Maintenance drawings: Supplement product data to illustrate relation of component parts of equipment and systems, to show control and flow diagrams. Do not use project Record Documents as maintenance drawings.
  - 5. Provide servicing and lubrication schedule, and list of lubricants required.
  - 6. Include manufacturer's printed operation and maintenance instructions.
  - 7. Include sequence of operation by controls manufacturer.
  - 8. Provide control diagrams by controls manufacturer as installed.
  - 9. Provide Construction Manager's coordination drawings, with color coded piping diagrams as installed.
  - 10. Provide charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.
  - 11. Provide original manufacturer's parts (OEM) list, illustrations assembly drawings, and diagrams required for maintenance.

- a. Provide list of original manufacturer's spare parts (OEM), current prices, and recommended quantities to be maintained in storage.
  - b. Include local source of supplies and replacement parts, and any other data pertinent for procurement procedures.
12. Additional requirements: As specified in individual specification Sections.

E. Standards:

1. Measurements: Provide all measurements in U.S. standard units such as feet and inches, pounds, and cfm; provide additional measurements in the "International System of Units" (SI).
2. Abbreviations: Provide complete nomenclature of all parts of all equipment; include part numbers of all replaceable parts.

1.9 MATERIALS AND FINISHES MANUAL

A. Furnish bound and properly identified manuals for all materials and finishes prior to request for Substantial Completion review.

1. Manuals shall be in 8-1/2 by 11 inch pages and bound in three "D ring" capacity binders with durable plastic covers. Internally subdivide the binder contents with permanent page dividers and logically organized.
2. Provide a listing in Table of Contents for design data, with tabbed fly sheet and space for insertion of data.
  - a. Arrange content by section number and systems, process flow, under section numbers and sequence as listed in the Table of Contents of this Project Manual.
  - b. Drawings: Preferable 11 inches in height bound in with text with reinforced punched binder tab. Fold drawings larger than 8-1/2 by 11 inches to size of text pages. Provide a drawing pocket for Drawings larger than 11 by 17 inches larger drawings; locate pocket inside rear cover or bound in with text.

B. Manuals shall include the following:

1. Product data, with catalog number, size, composition, and color and texture designations for all building products, applied materials, and finishes. Provide information for re-ordering custom manufactured products.
2. Instructions for care and maintenance: Include manufacturer's recommendations for cleaning agents and methods, precautions against detrimental agents and methods, and recommended schedule for cleaning and maintenance.
3. Moisture protection and weather exposed products: Include product data listing applicable reference standards, chemical composition, and details of installation. Provide recommendations for inspections, maintenance, and repair.
4. Additional requirements: As specified in individual specification Sections.

1.10 PEST CONTROL INSPECTION AND REPORT

- A. Engage an experienced, licensed exterminator to make a final inspection and fully rid Project of rodents, insects, and other pests.

1. Prepare and submit report, identify:
  - a. Area or areas which were treated.
  - b. Rodenticides used.
  - c. Manufacturer's data including MSDS, special precautions and applications instructions.
  - d. Pollution preventive measures employed.

1.11 SPARE PARTS AND MAINTENANCE MATERIALS

- A. Provide products, spare parts, maintenance and extra materials in quantities specified in individual specification Sections.
- B. Deliver materials to on-site location designated by the Owner; obtain receipt.

**PART 2 - PRODUCTS** (Not Used)

**PART 3 - EXECUTION** (Not Used)

End of Section

## **SECTION 017823 - OPERATION AND MAINTENANCE DATA**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section..

#### **1.2 SUMMARY**

- A. This Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:
  - 1. Operation and maintenance documentation directory.
  - 2. Emergency manuals.
  - 3. Operation manuals for systems, subsystems, and equipment.
  - 4. Maintenance manuals for the care and maintenance of products, materials, and finishes, and systems and equipment.
- B. Related Sections include the following:
  - 1. Division 01 Section "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
  - 2. Division 01 Section "Closeout Procedures" for submitting operation and maintenance manuals.
  - 3. Division 01 Section "Project Record Documents" for preparing Record Drawings for operation and maintenance manuals.
  - 4. Divisions 02 through 49 Sections for specific operation and maintenance manual requirements for the Work in those Sections.

#### **1.3 DEFINITIONS**

- A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.
- B. Subsystem: A portion of a system with characteristics similar to a system.

#### **1.4 SUBMITTALS**

- A. Initial Submittal: Submit four (4) draft copies of each manual at least fourteen (14) days before requesting inspection for Substantial Completion. Include a complete

operation and maintenance directory. Architect will return one (1) copy of draft and mark whether general scope and content of manual are acceptable.

- B. Final Submittal: Submit four (4) copies of each manual in final form at least (14) days before final inspection. Architect will return copy with comments within (14) days after final inspection.
  - 1. Correct or modify each manual to comply with Architect's comments. Submit six (6) copies of each corrected manual within (14) days of receipt of Architect's comments.

## **1.5 COORDINATION**

- A. Where operation and maintenance documentation includes information on installations by more than one factory-authorized service representative, assemble and coordinate information furnished by representatives and prepare manuals.

## **PART 2 - PRODUCTS**

### **2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY**

- A. Organization: Include a section in the directory for each of the following:
  - 1. List of documents.
  - 2. List of systems.
  - 3. List of equipment.
  - 4. Table of contents.
- B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
- C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
- D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.
- E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

### **2.2 MANUALS, GENERAL**

- A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
  - 1. Title page.
  - 2. Table of contents.
  - 3. Manual contents.
- B. Title Page: Enclose title page in transparent plastic sleeve. Include the following information:
  - 1. Subject matter included in manual.
  - 2. Name and address of Project.
  - 3. Name and address of Owner.
  - 4. Date of submittal.
  - 5. Name, address, and telephone number of Contractor.
  - 6. Cross-reference to related systems in other operation and maintenance manuals.
- C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.
  - 1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.
- D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.
  - 1. Binders: Heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch paper; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.
    - a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.
    - b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents. Indicate volume number for multiple-volume sets.
  - 2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.

3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software diskettes for computerized electronic equipment.
4. Supplementary Text: Prepared on 8-1/2-by-11-inch white bond paper.
5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.
  - a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.
  - b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

## **2.3 EMERGENCY MANUALS**

- A. Content: Organize manual into a separate section for each of the following:
  1. Type of emergency.
  2. Emergency instructions.
  3. Emergency procedures.
- B. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:
  1. Fire.
  2. Flood (internal spaces).
  3. Gas leak.
  4. Water leak.
  5. Power failure.
  6. Water outage.
  7. System, subsystem, or equipment failure.
- C. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.
- D. Emergency Procedures: Include the following, as applicable:
  1. Instructions on stopping.
  2. Shutdown instructions for each type of emergency.
  3. Operating instructions for conditions outside normal operating limits.
  4. Required sequences for electric or electronic systems.
  5. Special operating instructions and procedures.

## **2.4 OPERATION MANUALS**

- A. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:
1. System, subsystem, and equipment descriptions.
  2. Operating standards.
  3. Operating procedures.
  4. Operating logs.
  5. Wiring diagrams.
  6. Control diagrams.
  7. Piped system diagrams.
  8. Precautions against improper use.
  9. License requirements including inspection and renewal dates.
- B. Descriptions: Include the following:
1. Product name and model number.
  2. Manufacturer's name.
  3. Equipment identification with serial number of each component.
  4. Equipment function.
  5. Operating characteristics.
  6. Complete nomenclature and number of replacement parts.
- C. Operating Procedures: Include the following, as applicable:
1. Startup procedures.
  2. Equipment or system break-in procedures.
  3. Routine and normal operating instructions.
  4. Regulation and control procedures.
  5. Instructions on stopping.
  6. Normal shutdown instructions.
  7. Seasonal and weekend operating instructions.
  8. Required sequences for electric or electronic systems.
  9. Special operating instructions and procedures.
- D. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.
- E. Piped Systems: Diagram piping as installed, and identify color-coding where required for identification.

## **2.5 PRODUCT MAINTENANCE MANUAL**

- A. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

- B. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.
- C. Product Information: Include the following, as applicable:
  - 1. Product name and model number.
  - 2. Manufacturer's name.
  - 3. Color, pattern, and texture.
  - 4. Reordering information for specially manufactured products.
- D. Maintenance Procedures: Include manufacturer's written recommendations and the following:
  - 1. Inspection procedures.
  - 2. Types of cleaning agents to be used and methods of cleaning.
  - 3. List of cleaning agents and methods of cleaning detrimental to product.
  - 4. Schedule for routine cleaning and maintenance.
  - 5. Repair instructions.
- E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.
- F. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
  - 1. Include procedures to follow and required notifications for warranty claims.

## **2.6 SYSTEMS AND EQUIPMENT MAINTENANCE MANUAL**

- A. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.
- B. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.
- C. Manufacturers' Maintenance Documentation: Manufacturers' maintenance documentation including the following information for each component part or piece of equipment:
  - 1. Standard printed maintenance instructions and bulletins.

2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
  3. Identification and nomenclature of parts and components.
  4. List of items recommended to be stocked as spare parts.
- D. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:
1. Test and inspection instructions.
  2. Troubleshooting guide.
  3. Precautions against improper maintenance.
  4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
  5. Aligning, adjusting, and checking instructions.
  6. Demonstration and training videotape, if available.
- E. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.
1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
  2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.
- F. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.
- G. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.
- H. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
1. Include procedures to follow and required notifications for warranty claims.

## **PART 3 - EXECUTION**

### **3.1 MANUAL PREPARATION**

- A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals.

- B. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.
- C. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.
- D. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.
  - 1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
  - 2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.
- E. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
  - 1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.
- F. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in Record Drawings to ensure correct illustration of completed installation.
  - 1. Do not use original Project Record Documents as part of operation and maintenance manuals.
  - 2. Comply with requirements of newly prepared Record Drawings in Division 01 Section "Project Record Documents."
- G. Comply with Division 01 Section "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

**END OF SECTION 017823**

Section 01 78 36  
WARRANTIES

**PART 1 - GENERAL**

1.1 SUMMARY

- A. General: This Section specifies general administrative and procedural requirements for warranties, guarantees and bonds required by the Contract Documents, including manufacturers standard warranties on products and special warranties. Warranty, Guarantee and Bond requirements of this Section are applicable to all trades, all Divisions of the Specifications, and applies to all Work performed under this Contract.
  - 1. Warranties required under the Contract are in addition to and not in lieu of any remedy or warranty to which the Owner is entitled under law.
  - 2. Warranties required under the Contract are not a waiver of Owner's legal rights.
- B. Construction Manager's Procurement Obligations: Do not purchase, subcontract for, or allow others to purchase or sub-subcontract for material or units of work for project where a special project warranty, certification or similar commitment is required, until it has been determined that entities required to countersign such commitments are willing to do so.

1.2 RELATED REQUIREMENTS

- A. General provisions of the Contract, including General and Supplementary Conditions apply to this Section.
- B. Individual Specification Sections contain additional specific requirements for warranties and bonds.
- C. Certifications and other commitments and agreements for continuing services to Owner are specified elsewhere in the Contract Documents.

1.3 DISCLAIMERS AND LIMITATIONS

- A. General Limitations: It is recognized that specific warranties are intended primarily to protect Owner against failure of the work to perform as required, and against deficient, defective, and faulty materials and workmanship, regardless of sources.
- B. Disclaimers and Limitations: Manufacturer's disclaimers and limitations on product warranties do not relieve the Construction Manager of the warranty on the work that incorporates the products, nor does it relieve suppliers, manufacturers, Trade Contractors and subcontractors required to countersign special warranties with the Construction Manager.
  - 1. Pro-rating of warranties: Except where explicitly specified otherwise, each warranty issued shall cover the full cost of warranty-related repairs throughout the full term of the warranty.

#### 1.4 DEFINITIONS

- A. Categories of Specific Warranties: Warranties on the work are in several categories, including those of General Conditions, and including (but not necessarily limited to) the following specific categories related to individual units of work specified in sections of Divisions 2 through 50 of these Specifications:
1. Construction Manager's Comprehensive Warranty: The Construction Manager shall provide a comprehensive one-year warranty covering all labor, materials, equipment and work related to the entire Contract, and shall promptly repair or replace defective and deficient work.
  2. Special Project Warranty (Guaranty): A warranty specifically written and signed by Construction Manager for a defined portion of the work; and, where required, countersigned by Trade Contractor or subcontractor, installer, manufacturer or other entity engaged by Construction Manager. Special Warranties extend time limits provided by standard warranties or to provide greater rights for the Owner.
  3. Specified Product Warranty: A warranty which is required by Contract Documents, to be provided for a manufactured product incorporated into the work; regardless of whether manufacturer has published a similar warranty without regard for specific incorporation of product into the work, or has written and executed a special project warranty as a direct result of Contract Document requirements.
    - a. Standard Product Warranties are preprinted written warranties published by individual manufacturers for particular products and are specifically endorsed by the manufacturer to the Owner.
  4. Coincidental Product Warranty: A warranty not specifically required by Contract Documents (other than as specified in this Section), but which is available on a product incorporated into the work, by virtue of the fact that manufacturer or product has published warranty in connection with purchases and use of product without regard for specific applications except as otherwise limited by terms of warranty.

#### 1.5 WARRANTY REQUIREMENTS

- A. Warranty Period Commencement Date: Effective stating date for Warranty periods is the Date of Substantial Completion for Project.
1. Equipment and systems start-up, operation and use, occurring prior to Project Substantial Completion, will not be considered commencement of warranty period under any terms of this Contract.
  2. Exceptions: Starting dates for warranties prior to the Project Date of Substantial Completion are not permitted, except for the two conditions below:
    - a. Warranty requirements specified in individual specification sections explicitly specify that a required warranty or guarantee shall be effective on date of shipment, date of manufacturer, or date of installation.
    - b. Warranties for Incomplete work: The effective date for warranty of work which has not been completed prior to the Date of Substantial Completion, shall be effective on the date of Final Completion and Owner's acceptance of the Work.

- 
- B. Related Damages and Losses: In connection with Construction Manager's correction of warranted work which has failed, remove and replace other work of project which has been damaged as a result of such failure, or must be removed and replaced to provide access for correction of warranted work.
1. Consequential Damages: Except as otherwise indicated or required by governing regulations, special project warranties and product warranties are not extended to cover damage to building contents (other than work of Contract) which occurs as a result of failure of warranted work.
- C. Reinstatement of Warranty Period: Except as otherwise indicated, when work covered by a special project warranty or product warranty has failed and has been corrected by replacement or restoration, reinstate warranty by written endorsement starting on date of acceptance of replaced or restored work.
1. Reinstated warranty value: The reinstated warranty shall be equal to the original warranty with an equitable adjustment for depreciation.
  2. Reinstated warranty period: A period of time ending upon date original warranty would have expired, if there had been no failure, but not less than half of original warranty period of time.
- D. Warranties are Irrevocable: Warranties issued to the Owner are irrevocable.
1. Non-Payment: If warrantor refuses to issue warranty, or attempts to revoke warranty due to lack of payment by any party other than the Owner, the Construction Manager shall resolve the payment conflict, and cause the warranty to be issued or reinstated.
  2. Incomplete or incorrect Installation: If warrantor refuses to issue warranty, or attempts to revoke warranty due to improper installation or other deficiency, the Construction Manager shall correct the deficiency and cause the warranty to be issued or reinstated.
- E. Transferable Warranties: All warranties shall permit Owner to transfer or assign warranties to future owners or other assignors at no additional cost to the Owner for the full warranty period.
- F. Replacement Cost: Upon determination that work covered by a warranty has failed, replace or rebuild the work to an acceptable condition complying with requirements of Contract Documents. The Construction Manager is responsible for the cost of replacing or rebuilding defective work regardless of whether the Owner has benefited from use of the work through a portion of its anticipated useful service life.
1. Work repairs or replaced under warranty shall be warranted for the full duration of the original warranty.
- G. Owner's Recourse: Written warranties made to the Owner are in addition to implied warranties, and shall not limit the duties, obligations, rights and remedies otherwise available under the law, nor shall warranty periods be interpreted as limitations on time in which the Owner can enforce such other duties, obligations, rights, or remedies.
- H. Rejection of Warranties:
1. Owner reserves the right, at time of substantial completion or thereafter, to reject coincidental product warranties submitted by Construction Manager,

which in opinion of Owner tend to detract from or confuse interpretation of requirements of Contract Documents.

2. Owner reserves the right to reject warranties and to limit selection to products with warranties which are not in conflict with the requirements of the Contract Documents.

- I. Owner's right to refuse Work: The Owner reserves the right to refuse to accept work for the project where a special warranty, certification, or similar commitment is required on such work or part of the work, until evidence is presented that entities required to countersign such commitments are willing to do so.

#### 1.6 COMPREHENSIVE WARRANTY

- A. Comprehensive Warranty: In addition to all other warranties, the Construction Manager shall issue a Comprehensive Total Contract Warranty which shall include all work of this Contract, without limitation including consequential damages.
  1. Duration of Comprehensive Warranty: One full year from date of Substantial Completion.
  2. Consequential damages: Warranty includes consequential damages which relate to a warranty claim, these include without limitation:
    - a. All costs required to uncover and repair all work related to warranty claim.
    - b. All costs relating to repair and restoration of damaged property, resulting from warranty claim.
    - c. All costs resulting from failure to conform to the Contract Documents, and for required rebuilding, construction or reconstruction to correct work.
    - d. Perform to the satisfaction of the Owner all repairs, reconstruction, and restoration to original condition of adjacent and related work affected by damage under a warranty claim.
- B. Warranty Claims: Owner will notify Construction Manager in writing of each warranty claim. Warranty repairs shall be completed within 30 days of written notice, except as pre-approved by Owner.
  1. In the event of an emergency condition, where in the reasonable opinion of the Owner an immediate repair under warranty is necessary, warranty repairs shall be completed within 14 calendar days from date of notice.
  2. Owner's right to correct: In the event the Construction Manager fails to respond to a warranty claim within the specified time limits, the Owner reserves the right to make the necessary corrections or repairs and recover all costs and expenses from the Construction Manager.
- C. Construction Manager's responsibilities under Comprehensive Warranty:
  1. Notify in writing each affected warrantor and original Trade Contractor, subcontractor, installer, vendor as appropriate to the warranty claim.
  2. Manage the warranty claim for the Owner.
  3. Assist the Owner in obtaining warranty satisfaction.
  4. Arrange and manage all warranty related work including work relating to consequential damages.

1.7 SUBMITTALS

- A. Submit written warranties to the Owner prior to the date certified for Substantial Completion. In compliance with requirements specified under Section 01 77 00 – CLOSEOUT PROCEDURES and Section 01 78 00 – CLOSEOUT SUBMITTALS.
  - 1. When a designated portion of the Work is completed and occupied, or used by the Owner by separate agreement with the Construction Manager during the construction period, submit properly executed warranties to the Owner within 14 calendar days of completion of the designated portion of Work.
  - 2. Refer to individual section of Divisions 2 through 50 for the determination of units of work which are required to be specifically or individually warranted, and for the specific requirements and terms of those warranties (or guarantees).
  - 3. Specific Warranty Forms: Where a special project warranty (guaranty) or specified product warranty is required to be executed, prepare a written document to contain terms and appropriate identification, ready for execution by all required parties (including manufacturers, vendors, Trade Contractors and subcontractors). Submit draft to Owner (through Architect) for approval prior to final executions.
- B. Form of Submittal: At Final Completion, compile three (3) copies of each required warranty and bond properly executed by the Construction Manager, or by the Construction Manager, Trade Contractors, subcontractor, supplier or manufacturer. Organize the warranty documents into an orderly sequence based on the Table of Contents of the Project Manual.
  - 1. Bind warranties and bonds in heavy-duty, commercial quality, durable 3-ring vinyl-covered loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2" by 11" paper.
  - 2. Provide heavy paper dividers with celluloid-covered tabs for each separate warranty. Mark the tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product, and the name, address and telephone number of the installer.
  - 3. Identify each binder on the front and the spine with the typed or printed title "WARRANTIES AND BONDS", the project title or name, and the name of the Construction Manager.
  - 4. When operating and manuals are required for warranted construction, provide additional copies of each required warranty, as necessary, for inclusion in each required manual.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 – EXECUTION**

3.1 SCHEDULE

- A. Provide warranties on products and installations as specified in individual specification Sections in Divisions 2 through 50 of the Project Manual.

End of Section

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

## **SECTION 017839 - PROJECT RECORD DOCUMENTS**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.

#### **1.2 SUMMARY**

- A. This Section includes administrative and procedural requirements for Project Record Documents, including the following:
  - 1. As-Built Record Drawings.
  - 2. Contractor's Record Drawings.
- B. Related Sections include the following:
  - 1. Division 01 Section "Closeout Procedures" for general closeout procedures.
  - 2. Division 01 Section "Operation and Maintenance Data" for operation and maintenance manual requirements.
  - 3. Divisions 02 through 49 Sections for specific requirements for Project Record Documents of the Work in those Sections.

#### **1.3 SUBMITTALS**

- A. As-Built Record Drawings:
  - 1. Submit copies of As-Built Record Drawings as follows:
    - a. Initial Submittal: Submit one (1) set of plots on bond paper from corrected Record CAD Drawings. Architect will initial, and date each plot and mark whether general scope of changes, additional information recorded, and quality of drafting are acceptable. Architect will return plots for preparation of the final submittal.
    - b. Mylar and Paper Final Submittals: Submit two (2) sets of corrected Record CAD Drawings plotted in permanent ink on 30" x 42" .004" thick single matte Mylar drafting film, and five (5) sets plotted in permanent ink on 30" x 42" .004" thick, acid free 24 lb. bond with opacity 88%, whiteness 96, brightness 94%, smoothness 80. Print each Drawing, whether or not changes or additional information were recorded.

- c. Electronic Final Submittal: Provide six (6) set(s) of DVDs each to have a Table of Contents file to AutoRun on insertion in a PC's DVD drive. Table of Contents shall be in html with drawing number, drawing title, and description of contents, hyperlinked to the AutoCad v. 2007 drawing files.

## **PART 2 - PRODUCTS**

### **2.1 CONTRACTOR'S RECORD DRAWINGS RECORD PRINTS:**

- A. Maintain one set of blue- or black-line white prints of the Contract Drawings and Shop Drawings.
  - 1. Preparation: Mark Record Prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to prepare the marked-up Record Prints.
    - a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
    - b. Accurately record information in an understandable drawing technique.
    - c. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations.
  - 2. Content: Types of items requiring marking include, but are not limited to, the following:
    - a. Dimensional changes to Drawings.
    - b. Revisions to details shown on Drawings.
    - c. Depths of foundations below floor slabs.
    - d. Locations and depths below floor slabs-on-grade of underground utilities.
    - e. Locations and depths below floor slabs-on-grade of electrical conduits, waste piping, sewer, roof drains, and sub-soil drains, and radon venting piping.
    - f. Revisions to routing of piping and conduits.
    - g. Revisions to electrical circuitry.
    - h. Actual equipment locations.
    - i. Duct size and routing.
    - j. Locations of concealed internal utilities.
    - k. Changes made by Change Order or Construction Change Directive.
    - l. Changes made following Architect's written orders.
    - m. Details not on the original Contract Drawings.
    - n. Field records for variable and concealed conditions.
    - o. Record information on the Work that is shown only schematically.
  - 3. Mark the Contract Drawings, Coordination Drawings, or Shop Drawings, whichever is most capable of showing actual physical conditions, completely and

- accurately. If Coordination or Shop Drawings are marked, show cross-reference on the Contract Drawings.
4. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
  5. Mark important additional information that was either shown schematically or omitted from original Drawings.
  6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.
- B. As-Built Record CAD Drawings: Immediately before inspection for Certificate of Substantial Completion, review marked-up Record Prints with Architect, and Owner's Project Manager, and School Plant Manager. When authorized, prepare a full set of corrected CAD Drawings of the Contract Drawings, as follows:
1. Format: Same CAD program, version, and operating system as the original Contract Drawings.
  2. Incorporate changes and additional information previously marked on Record Prints. Delete, redraw, and add details and notations where applicable.
  3. Refer instances of uncertainty to Architect, and or Owner's Project Manager for resolution.
  4. Architect will furnish Contractor one set of CAD Drawings of the Contract Drawings for use in recording information.
    - a. Architect makes no representations as to the accuracy or completeness of CAD Drawings as they relate to the Contract Drawings.
    - b. The Contract Drawings are available in AutoCad and in one or more of the following versions: v 2000, v 2004, and v 2007. Contractor should convert files to v. 2007 as soon as he receives the files.
- C. Newly Prepared Record Drawings:
1. New Drawings shall be required when a Change Order is issued as a result of accepting an alternate, substitution, or other modification in response to an RFP.
  2. Consult Architect for proper scale and scope of detailing and notations required to record the actual physical installation and its relation to other construction. Integrate newly prepared Record Drawings into As-Built Record Drawing sets; comply with procedures for formatting, organizing, copying, binding, and submitting.
- D. Identify and date each Record Drawing; include the designation "PROJECT AS-BUILT RECORD DRAWING" in a prominent location.
1. Record Prints: Organize Record Prints and newly prepared Record Drawings into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.

2. Record CAD Drawings: Organize CAD information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each CAD file.
3. Identification: As follows:
  - a. Project name.
  - b. Date.
  - c. Designation "PROJECT AS-BUILT RECORD DRAWINGS."
  - d. Name of Architect.
  - e. Name of Contractor.

## **2.2 AS-BUILT RECORD SPECIFICATIONS**

- A. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
  1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
  2. Mark copy with the identifying number of the approved submission, or proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
  3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
  4. For each principal product, indicate whether Record Product Data has been submitted in operation and maintenance manuals instead of submitted as Record Product Data.
  5. Note related Change Orders, Record Product Data, and Record Drawings where applicable.

## **2.3 RECORD PRODUCT DATA**

- A. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.
  1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
  2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
  3. Note related Change Orders, Record Specifications, and Record Drawings where applicable.

## **2.4 MISCELLANEOUS RECORD SUBMITTALS**

- A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

## **PART 3 - EXECUTION**

### **3.1 RECORDING AND MAINTENANCE**

- A. Recording: Maintain one copy of each submittal during the construction period for Project Record Document purposes. Post changes and modifications to Project Record Documents as they occur; do not wait until the end of Project.
- B. Maintenance of Record Documents and Samples: Store Record Documents and Samples in the field office apart from the Contract Documents used for construction. Do not use Project Record Documents for construction purposes. Maintain Record Documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to Project Record Documents for Architect's, and Owner's Project Manager's reference during normal working hours.

**END OF SECTION 017839**

**DO NOT REMOVE  
THIS PAGE INTENTIONALLY LEFT BLANK**

## **SECTION 017900 - DEMONSTRATION AND TRAINING**

### **PART 1 - GENERAL**

#### **1.1 RELATED DOCUMENTS**

- A. Attention is directed to the CONTRACT and GENERAL CONDITIONS and all Sections within DIVISION 1 – GENERAL REQUIREMENTS, which are hereby made a part of this Section.

#### **1.2 SUMMARY**

- A. This Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:
  - 1. Demonstration of operation of systems, subsystems, and equipment.
  - 2. Training in operation and maintenance of systems, subsystems, and equipment.
  - 3. Demonstration and training videotapes.
- B. Related Sections include the following:
  - 1. Division 01 Section "Project Management and Coordination" for requirements for preinstruction conferences.
  - 2. Divisions 02 through 49 Sections for specific requirements for demonstration and training for products in those Sections.

#### **1.3 SUBMITTALS**

- A. Instruction Program: Submit six (6) copies of outline of instructional program for demonstration and training, including a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.
  - 1. At completion of training, submit six (6) complete training manual(s) for Owner's use.
- B. Qualification Data: For facilitator, instructor, and photographer.
- C. Attendance Record: For each training module, submit list of participants and length of instruction time.
- D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

- E. Demonstration and Training DVDs: Submit two (2) copies within seven (7) days of end of each training module.
1. Identification: On each copy, provide an applied label with the following information:
    - a. Name of Project.
    - b. Name and address of photographer.
    - c. Name of Architect and Construction Manager.
    - d. Name of Contractor.
    - e. Date videotape was recorded.
    - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
  2. Transcript: Prepared on 8-1/2-by-11-inch paper, punched and bound in heavy-duty, 3-ring, vinyl-covered binders. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding videotape. Include name of Project and date of videotape on each page.

#### **1.4 QUALITY ASSURANCE**

- A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
- B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Division 01 Section "Quality Requirements," experienced in operation and maintenance procedures and training.
- C. Photographer Qualifications: A professional photographer who is experienced photographing construction projects.
- D. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:
1. Inspect and discuss locations and other facilities required for instruction.
  2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
  3. Review required content of instruction.
  4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

## **1.5 COORDINATION**

- A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations.
- B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
- C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Architect.

## **PART 2 - PRODUCTS**

### **2.1 INSTRUCTION PROGRAM**

- A. Program Structure: Develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections, and as follows:
  - 1. Motorized doors, including overhead coiling doors, overhead coiling grilles, and automatic entrance doors.
  - 2. Equipment, including stage equipment, projection screens, waste compactors, food-service equipment, residential appliances, and laboratory fume hoods.
  - 3. Fire-protection systems, including fire alarm, fire pumps, and fire-extinguishing systems.
  - 4. Intrusion detection systems.
  - 5. Conveying systems, including elevators and wheelchair lifts.
  - 6. Laboratory equipment, including laboratory air and vacuum equipment and piping.
  - 7. Heat generation, including boilers, feedwater equipment, pumps, and water distribution piping.
  - 8. Refrigeration systems, including chillers, cooling towers, condensers, pumps, and distribution piping.
  - 9. HVAC systems, including air-handling equipment, air distribution systems, and terminal equipment and devices.
  - 10. HVAC instrumentation and controls.
  - 11. Electrical service and distribution, including transformers, switchboards, panelboards, uninterruptible power supplies, and motor controls.
  - 12. Packaged engine generators, including transfer switches.
  - 13. Lighting equipment and controls.
  - 14. Communication systems, including intercommunication, surveillance, clocks and programming, voice and data, and television equipment.

- B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following:
1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
    - a. System, subsystem, and equipment descriptions.
    - b. Performance and design criteria if Contractor is delegated design responsibility.
    - c. Operating standards.
    - d. Regulatory requirements.
    - e. Equipment function.
    - f. Operating characteristics.
    - g. Limiting conditions.
    - h. Performance curves.
  2. Documentation: Review the following items in detail:
    - a. Emergency manuals.
    - b. Operations manuals.
    - c. Maintenance manuals.
    - d. Project Record Documents.
    - e. Identification systems.
    - f. Warranties and bonds.
    - g. Maintenance service agreements and similar continuing commitments.
  3. Emergencies: Include the following, as applicable:
    - a. Instructions on meaning of warnings, trouble indications, and error messages.
    - b. Instructions on stopping.
    - c. Shutdown instructions for each type of emergency.
    - d. Operating instructions for conditions outside of normal operating limits.
    - e. Sequences for electric or electronic systems.
    - f. Special operating instructions and procedures.
  4. Operations: Include the following, as applicable:
    - a. Startup procedures.
    - b. Equipment or system break-in procedures.
    - c. Routine and normal operating instructions.
    - d. Regulation and control procedures.
    - e. Control sequences.
    - f. Safety procedures.
    - g. Instructions on stopping.
    - h. Normal shutdown instructions.
    - i. Operating procedures for emergencies.

- j. Operating procedures for system, subsystem, or equipment failure.
  - k. Seasonal and weekend operating instructions.
  - l. Required sequences for electric or electronic systems.
  - m. Special operating instructions and procedures.
5. Adjustments: Include the following:
- a. Alignments.
  - b. Checking adjustments.
  - c. Noise and vibration adjustments.
  - d. Economy and efficiency adjustments.
6. Troubleshooting: Include the following:
- a. Diagnostic instructions.
  - b. Test and inspection procedures.
7. Maintenance: Include the following:
- a. Inspection procedures.
  - b. Types of cleaning agents to be used and methods of cleaning.
  - c. List of cleaning agents and methods of cleaning detrimental to product.
  - d. Procedures for routine cleaning
  - e. Procedures for preventive maintenance.
  - f. Procedures for routine maintenance.
  - g. Instruction on use of special tools.
8. Repairs: Include the following:
- a. Diagnosis instructions.
  - b. Repair instructions.
  - c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
  - d. Instructions for identifying parts and components.
  - e. Review of spare parts needed for operation and maintenance.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a combined training manual.
- B. Set up instructional equipment at instruction location.

### **3.2 INSTRUCTION**

- A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.
- B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
  - 1. The Commissioning Agent will furnish an instructor to describe basis of system design, operational requirements, criteria, and regulatory requirements.
  - 2. Owner will furnish an instructor to describe Owner's operational philosophy.
  - 3. Owner will furnish Contractor with names and positions of participants.
- C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.
  - 1. Schedule training with Owner, through Owner's Project Manager, with at least fourteen (14) days' advance notice.
- D. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a written and demonstration performance-based test.
- E. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

### **3.3 DEMONSTRATION AND TRAINING VIDEOTAPES**

- A. General: Engage a qualified commercial photographer to record demonstration and training. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.
  - 1. At beginning of each training module, record each chart containing learning objective and lesson outline.
- B. Provide digital recordings for final preparation of DVDs. Optional Videotape Format: Provide high-quality VHS color videotape in full-size cassettes for conversion to DVD format.
- C. DVD Format: Provide six (6) copies of each demonstrations and trainings.
- D. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to show area of demonstration and training. Display continuous running time.
- E. Narration: Describe scenes on videotape by audio narration by microphone while videotape is recorded. Include description of items being viewed. Describe vantage

point, indicating location, direction (by compass point), and elevation or story of construction.

- F. Transcript: Provide a typewritten transcript of the narration. Display images and running time captured from videotape opposite the corresponding narration segment.

THIS PAGE INTENTIONALLY LEFT BLANK**

SECTION 01 81 13  
SUSTAINABLE DESIGN REQUIREMENTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section includes general requirements and procedures for compliance with certain prerequisites and credits needed for Project to obtain "LEED Version 4 for Building Design and Construction: Schools" (LEED v4 BD+C: Schools) Silver certification based on USGBC's LEED v4 BD+C: Schools.
  - 1. Specific requirements for LEED are also included in other Sections.
  - 2. Some LEED prerequisites and credits needed to obtain LEED certification depend on product selections and may not be specifically identified as LEED requirements. Compliance with requirements needed to obtain LEED prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.
  - 3. A copy of the LEED Project checklist is attached at the end of this Section for information only.
    - a. Some LEED prerequisites and credits needed to obtain the indicated LEED certification depend on aspects of Project that are not part of the Work of the Contract.
  - 4. A copy of the LEED Materials Reporting Form is included at the end of this section.
  - 5. Definitions included in the "LEED Version 4 for Building Design and Construction" (LEED v4 BD+C) Reference Guide and online amendments apply to this Section.
- B. Related Requirements:
  - 1. Section 01 33 00, Submittal Procedures.
  - 2. Section 01 50 00, Temporary Facilities and Controls for temporary heating and cooling requirements.
  - 3. Section 01 74 19, Construction Waste Management
  - 4. Section 01 81 19, Indoor Air Quality Requirements.
  - 5. Section 01 91 13, General Commissioning Requirements
  - 6. Section 01 91 19 Exterior Enclosure Commissioning Requirements
  - 7. Divisions 02 through 49 Sections for LEED requirements specific to the work of each of these Sections. Requirements may or may not include reference to LEED.

1.03 DEFINITIONS

- A. Bio-Based Materials: Materials that meet the Sustainable Agriculture Network's Sustainable Agriculture Standard. Bio-based raw materials shall be tested using ASTM D 6866 and be legally harvested, as defined by the exporting and receiving country.

- B. CDPH Standard Method v1.1: California Department of Public Health (CDPH) Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, v. 1.1–2010, for the emissions testing and requirements of products and materials.
- C. Chain-of-Custody (COC): A procedure that tracks a product from the point of harvest or extraction to its end use, including all successive stage of processing, transformation, manufacturing, a distribution.
- D. Chain-of-Custody Certificates: Certificates signed by manufacturers and fabricators certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001.
- E. Composite Wood and Agrifiber: Products made of wood particles and/or plant material pressed and bonded with adhesive or resin such as particleboard, medium density fiberboard (MDF), plywood, wheatboard, strawboard, panel substrates, and door cores.
- F. Corporate Sustainability Report: A third-party verified report that outlines the environmental impacts of extraction operations and activities associated with the manufacturer's product and the product's supply chain.
- G. Environmental Product Declaration (EPD): An independently verified report based on life-cycle assessment studies that have been conducted according to a set of common rules for each product category and peer-reviewed.
  - 1. Product-Specific Declaration: A product with a publicly available, critically reviewed life-cycle assessment conforming to ISO 14044 that has at least a cradle to gate scope.
  - 2. Industry-Wide (Generic) EPD: Provide products with third-party certification (Type III), including external verification, in which the manufacturer is explicitly recognized as a participant by the program operator. EPD must conform to ISO 14025, 14040, 14044, and EN 15804 or ISO 21930 and have at least a cradle to gate scope.
  - 3. Product-Specific Type III EPD: A product with a third-party certification, including external verification, in which the manufacturer is explicitly recognized by the program operator. EPD must conform to ISO 14025, 14040, 14044, and EN 15804 or ISO 21930 and have at least a cradle to gate scope.
- H. Extended Producer Responsibility (EPR): Measures undertaken by the maker of a product to accept its own and sometimes other manufacturers' products as postconsumer waste at the end of the products' useful life.
- I. Health Product Declaration Open Standard (HPD): A standard format for reporting product content and associated health information for building products and materials.
- J. Indoor Air Quality (IAQ) Management Plan: Plan developed by the Contractor to provide a healthy indoor environment for workers and building occupants during construction. Plan must meet or exceed the recommendations of the Sheet Metal and Air Conditioning Contractors National Association (SMACNA) "IAQ Guidelines for Occupied Buildings Under Construction."
- K. Leadership Extraction Practices: Products that meet at least one of the responsible extraction criteria, which include: extended producer responsibility; bio-based materials; FSC wood products; materials reuse; recycled content; and other USGBC approved programs.

- L. **Material Cost:** The dollar value of materials being provided to the site, after Contractor mark-ups, including transportation costs, taxes, fees, and shop labor, but excluding field equipment and field labor costs.
- M. **Materials Reuse:** Reuse includes salvaged, refurbished, or reused products.
- N. **Multi-Attribute Optimization:** Third party certified products that demonstrate impact reduction below industry average in at least three of the following six categories: global warming potential; stratospheric ozone depletion; acidification; eutrophication; tropospheric ozone creation; nonrenewable resource depletion.
- O. **Recycled Content:** Recycled content is the sum of postconsumer recycled content plus one-half the preconsumer recycled content, based on cost.
  - 1. "Postconsumer" material is defined as waste material generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product, which can no longer be used for its intended purpose.
  - 2. "Preconsumer" material is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials, such as rework, regrind, or scrap, generated in a process and capable of being reclaimed within the same process that generated it.
- P. **Regional Materials:** Materials that are extracted, harvested, recovered, and manufactured within a radius of 100 miles from the Project site.
- Q. **Volatile Organic Compounds (VOC) Emissions Test:** Refer to CDPH Standard Method v1.1 definition.

#### 1.04 ADMINISTRATIVE REQUIREMENTS

- A. Work of this project includes completed building and application for LEED certification. Work is not complete until Owner has accepted USGBC's final review of LEED certification.
  - 1. Provide documentation required by LEED and LEED review.
- B. Provide materials and procedures necessary to obtain LEED prerequisites and credits required in this Section. Other Sections may specify requirements that contribute to LEED prerequisites and credits. Refer to other sections for additional materials and procedures necessary to obtain LEED prerequisites and credits.
- C. Respond to questions and requests for additional information from Architect and the USGBC regarding LEED credits until the USGBC has made its determination on the project's LEED certification application.
- D. **LEED Online Submittals:** Upload LEED documentation submittal data directly to USGBC project "LEED Online" website. Complete online forms at least monthly and as necessary to document LEED credits for submittals required in this Section.
- E. **LEED Conference:** Schedule and conduct a conference at a time convenient to Owner and Architect within 21 days prior to commencement of the work. Advise Architect, Owner's Commissioning Authority, and Owner's Project Manager of scheduled meeting dates.

1. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Owner's Project Manager, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
2. Agenda: LEED goals for the project, Contractor's action plans, and discussion of targeted LEED Prerequisites and Credits.
3. Minutes: Record and distribute minutes to attendees and other entities with responsibilities for obtaining LEED Credits.

#### 1.05 ACTION SUBMITTALS

- A. General: Submit additional LEED submittals required by other Specification Sections.

1. Submit each LEED submittal simultaneously with applicable product submittal.

- B. LEED Documentation Submittals:

1. General, LEED Materials Reporting Form: Project submittals must be accompanied by a completed LEED Materials Reporting Form. Submittal packages must also include highlighted documentation supporting the sustainability claims made on the LEED Materials Reporting Form.
2. SSc5, Heat Island Reduction: Product data for roof and non-roof hardscape products indicating compliance with solar reflectance index (SRI) and solar reflectance (SR) requirements.
3. EAp3, Building-Level Energy Metering: Product data for meters, sensors, and data collection system used to provide continuous metering of building energy-consumption performance.
4. EAc3, Advanced Energy Metering: Product data for meters, sensors, and data collection system used to provide continuous metering of individual energy-consumption performance of any individual energy end uses that represent 10% or more of the total annual consumption of the building.
5. MRp2/MRc5, Construction and Demolition Waste Management: Comply with submittal requirements of Section 01 74 19 "Construction Waste Management and Disposal."
6. MRc2, Building Product Disclosure and Optimization: Environmental Product Declarations complying with LEED requirements.
7. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials: Option 2, Leadership Extraction Practices.
  - a. Extended Producer Responsibility: Product data and certification letter from product manufacturers, indicating participation in an extended producer responsibility program and statement of costs.
  - b. Bio-Based Materials: Product data and certification for bio-based materials, indicating that they comply with requirements. Include statement of costs.
  - c. Certified Wood: Product data and chain-of-custody certificates for products containing certified wood. Include statement indicating cost for each certified wood product.
  - d. Materials Reuse: Receipts for salvaged and refurbished materials used for Project, indicating sources and costs.
  - e. Recycled Content: Product data and certification letter from product manufacturers, indicating percentages by weight of postconsumer and

- preconsumer recycled content for products having recycled content. Include statement of costs.
- f. Regional Content: Product data and certification letter from product manufacturers, indicating extraction, harvest, recovery, and manufacturer location and distance (miles) from the Project site.
8. MRc4, Building Product Disclosure and Optimization, Material Ingredients: Option 1, Material Ingredient Reporting.
- a. Material ingredient reports for products that comply with LEED requirements for material ingredient reporting, including but not limited to the following:
- 1) Manufacturer Inventory.
  - 2) Health Product Declaration.
  - 3) Cradle to Cradle certifications.
  - 4) Declare product labels.
9. EQp2/EQc3/EQc4, Indoor Air Quality: Comply with submittal requirements of 01 81 19, Indoor Air Quality Requirements.
10. EQc2, Low-Emitting Materials: Product data, indicating VOC content, volume of product used, emissions testing documents, and/or other required product category evaluation criteria, showing compliance with requirements for low-emitting materials for the following products:

| Product Category  | VOC<br>Conte<br>nt | Volum<br>e<br>Used<br>(budg<br>et<br>metho<br>d<br>only) | General<br>Emissions<br>Complianc<br>e | Category<br>Evaluation<br>Compliance |
|---|--------------------|--|--|--------------------------------------|
| a. Paints and coatings  | X                  | X  | X                                      |                                      |
| b. Adhesives and sealants   | X                  | X  | X                                      |                                      |
| c. Flooring   |                    |  | X                                      |                                      |
| d. Products containing composite wood or agrifiber products or wood glues |                    |  |  | X<br>(ULEF,<br>NAF)                  |
| e. Ceilings, walls, thermal, and acoustic insulation                      |                    |  | X                                      | X<br>(Batt<br>Insulation)            |
| f. Exterior applied materials.<br>(Healthcare and Schools projects only)  | X                  | X  |  |                                      |

#### 1.06 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For LEED coordinator.
- B. Project Materials Cost Data: Provide statement indicating total cost for materials used for Project. Costs exclude labor, overhead, and profit. Include breakout of costs for the following categories of items:
1. Mechanical.

2. Electrical.
  3. Plumbing.
  4. Wood construction materials.
  5. Furniture.
  6. Earthwork and exterior improvements, hard costs.
- C. LEED Action Plan Components: Provide preliminary submittals within 30 days of date established for the Notice to Proceed indicating how the following requirements will be met:
1. MRp2/MRc5, Waste management plan, complying with Section 01 74 19 Construction Waste Management
  2. EQp2/EQ3/EQ4, Indoor air quality plan, complying with Section 01 81 19, Indoor Air Quality Requirements.
- D. LEED Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with LEED action plans for the following:
1. MRp2/MRc5, Waste reduction progress reports complying with Section 01 74 19 Construction Waste Management
  2. MRc2, Building product disclosure and optimization – environmental product declarations.
    - a. LEEDv4 MR BPDO Calculator or equivalent MR Tracking Sheet monitoring the project's progress towards targeted LEED MR Credits. To be presented at construction meetings.
  3. MRc3, Building product disclosure and optimization – sourcing of raw materials.
    - a. Option 2:
      - 1) Extended producer responsibility.
      - 2) Bio-based materials.
      - 3) Certified wood products.
      - 4) Materials reuse.
      - 5) Recycled content.AND additionally for any product meeting at least one of attributes 1-5 above:
      - 6) Regional content.
    - b. LEEDv4 MR BPDO Calculator or equivalent MR Tracking Sheet monitoring the project's progress towards targeted LEED MR Credits. To be presented at construction meetings.
  4. MRc4, Building product disclosure and optimization – material ingredients.
    - a. LEEDv4 MR BPDO Calculator or equivalent MR Tracking Sheet monitoring the project's progress towards targeted LEED MR Credits. To be presented at construction meetings.
  5. EQc2, Low emitting materials.
    - a. LEEDv4 Low Emitting Materials Calculator or equivalent Low Emitting Materials Tracking Sheet monitoring the project's progress towards targeted LEED Indoor Environmental Quality Credits. To be presented at construction meetings.
  6. EQc3, Indoor air quality, during construction, complying with Section 01 81 19, Indoor Air Quality Requirements.

7. EQc4, Indoor air quality assessment, complying with Section 01 81 19, Indoor Air Quality Requirements.

## 1.07 QUALITY ASSURANCE

- A. LEED Coordinator: Engage an experienced LEED-Accredited Professional to coordinate LEED requirements. LEED coordinator may also serve as waste management coordinator.

## PART 2 - PRODUCTS

### 2.01 MATERIALS, GENERAL

- A. Provide products and procedures necessary to obtain LEED credits required in this Section. Although other Sections may specify some requirements that contribute to LEED credits, the Contractor shall determine additional materials and procedures necessary to obtain LEED credits indicated. Contractor to determine a combination of credit options best suited for achieving credits required.

1. Exclusions: Special equipment, such as elevators, escalators, process equipment, and fire suppression systems, is excluded from the credit calculations. Also excluded are products purchased for temporary use on the project, like formwork for concrete.

- B. Unauthorized Products: Materials and products required for work of this section shall not contain asbestos, lead, mercury, polychlorinated biphenyls (PCBs), or other hazardous materials identified by the Owner.

### 2.02 BUILDING PRODUCT DISCLOSURE AND OPTIMIZATION

- A. MRc2, Building Product Disclosure and Optimization, Environmental Product Declarations (EPD): Option 1. Provide at least 20 permanently installed products (sourced from at least 5 different manufacturers) which meet one of the disclosure criteria:

1. Product-Specific Declaration: Valued as one quarter (1/4) of a product.
2. Industry-Wide (Generic) EPD: Valued as one half (1/2) of a product.
3. Product-Specific Type III EPD: Valued as one whole product.

- B. MRc3, Building Product Disclosure and Optimization, Sourcing of Raw Materials: Option 2, Leadership Extraction Practices. Provide products that meet at least one of the responsible extraction criteria below for at least 25%, by cost, of the total value of permanently installed building products in the project:

1. Extended producer responsibility program.
2. Bio-based materials.
3. Certified Wood: Wood-based materials include, but are not limited to, the following materials when made from wood, engineered wood products, or wood-based panel products:
  - a. Rough carpentry.
  - b. Miscellaneous carpentry.
  - c. Heavy timber construction.
  - d. Wood decking.

- e. Metal-plate-connected wood trusses.
  - f. Structural glued-laminated timber.
  - g. Finish carpentry.
  - h. Architectural woodwork.
  - i. Wood paneling.
  - j. Wood veneer wall covering.
  - k. Wood flooring.
  - l. Wood lockers.
  - m. Wood cabinets.
- 4. Recycled content.
  - a. Exceptions: Do not include furniture, fire protection, operational plumbing, operational mechanical, and operational electrical components, and specialty items, such as elevators and equipment, in the calculation.
- 5. AND Regional content, only for a product that meets at least one of the attributes 1-4 listed above.
- 6. Note: Structure and enclosure materials may not constitute more than 30% of the value of MRc3 compliant building products.
- C. MRc4, Building Product Disclosure and Optimization, Material Ingredients: Option 1, Material Ingredient Reporting.
  - 1. Use at least 20 different permanently installed products from at least five different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm), which meet one of the following disclosure criteria:
    - a. Manufacturer Inventory.
    - b. Health Product Declarations (HPDs).
    - c. Cradle to Cradle (C2C) certifications.
    - d. Declare product labels.

## 2.03 LOW-EMITTING MATERIALS

- A. EQc2, Low-Emitting Materials, General Emissions Requirements: Products must demonstrate they have been tested and determined compliant in accordance with California Department of Public Health, (CDHP), Standard Method v1.1-2010, using the applicable exposure scenario. Manufacturer's documentation demonstrating compliance must state the range of total VOCs (tVOC) after 14 days measured as specified in the CDPH Standard Method v1.1 as follows:
  - 1. 0.5mg/m<sup>3</sup> or less,
  - 2. between 0.5 and 5.0 mg/m<sup>3</sup> or,
  - 3. 0.50 mg/m<sup>3</sup> or more.
- B. EQc2, Low-Emitting Materials, Paints and Coatings, VOC content: For field applications that are inside the weatherproofing system, 100 percent of paints and coatings shall comply with the limits for VOC content when calculated according to the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, OR the South Coast Air Quality Management District (SCAQMD) Rule 1113, effective June 3, 2011.

| Product Type:  | Allowable VOC Content (g/L): |
|--|------------------------------|
| Bond Breaker   | 350                          |
| Clear wood finishes - Varnish  | 275                          |
| Clear wood finishes – Sanding Sealer                                     | 275                          |
| Clear wood finishes - Lacquer  | 275                          |
| Colorant – Architectural Coatings, excluding IM coatings                 | 50                           |
| Colorant – Solvent Based IM  | 600                          |
| Colorant - Waterborne IM   | 50                           |
| Concrete – Curing compounds  | 100                          |
| Concrete – Curing compounds for roadways & bridges                       | 350                          |
| Concrete surface retarder  | 50                           |
| Driveway Sealer  | 50                           |
| Dry-fog coatings   | 50                           |
| Faux finishing coatings - Clear topcoat                                  | 100                          |
| Faux finishing coatings – Decorative Coatings                            | 350                          |
| Faux finishing coatings - Glazes   | 350                          |
| Faux finishing coatings - Japan  | 350                          |
| Faux finishing coatings – Trowel applied coatings                        | 50                           |
| Fire-proof coatings  | 150                          |
| Flats  | 50                           |
| Floor coatings   | 50                           |
| Form release compounds   | 100                          |
| Graphic arts (sign) coatings   | 150                          |
| Industrial maintenance coatings  | 100                          |
| Industrial maintenance coatings – High temperature IM coatings           | 420                          |
| Industrial maintenance coatings – Non-sacrificial anti-graffiti coatings | 100                          |
| Industrial maintenance coatings – Zinc rich IM primers                   | 100                          |
| Magnesite cement coatings  | 450                          |
| Mastic coatings  | 100                          |
| Metallic pigmented coatings  | 150                          |
| Multi-color coatings   | 250                          |
| Non-flat coatings  | 50                           |
| Pre-treatment wash primers   | 420                          |
| Primers, sealers and undercoaters  | 100                          |
| Reactive penetrating sealers   | 350                          |
| Recycled coatings  | 250                          |
| Roof coatings  | 50                           |
| Roof coatings, aluminum  | 100                          |
| Roof primers, bituminous   | 350                          |
| Rust preventative coatings   | 100                          |

|  |     |
|--|-----|
| Stone consolidant                      | 450 |

- C. EQc2, Low-Emitting Materials, Paints and Coatings, General Emissions Requirement: For field applications that are inside the weatherproofing system, at least 90 percent of paints and coatings, measured by volume, shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
1. To comply with the General Emissions Requirement, products shall meet one of the following:
    - a. UL Greenguard Gold Certified
    - b. SCS Indoor Advantage Gold Certified
    - c. MAS Certified Green
    - d. Meet California Department of Public Health (CDHP), Standard Method v1.1-2010, using the applicable exposure scenario.
- D. EQc2, Low-Emitting Materials, Adhesives and Sealants, VOC content: For field applications that are inside the weatherproofing system, 100 percent of adhesives and sealants shall comply with the limits for VOC content when calculated according to South Coast Air Quality Management District (SCAQMD) Rule #1168, requirements in effect on July 1, 2005, and rule amendment date January 7, 2005:

| Architectural Applications:         | Allowable VOC Content (g/L): |
|-------------------------------------|------------------------------|
| Indoor carpet adhesives             | 50                           |
| Carpet pad adhesives                | 50                           |
| Outdoor carpet adhesives            | 150                          |
| Wood flooring adhesives             | 100                          |
| Rubber floor adhesives              | 60                           |
| Subfloor adhesives                  | 50                           |
| Ceramic tile adhesives              | 65                           |
| VCT and asphalt tile adhesives      | 50                           |
| Dry wall and panel adhesives        | 50                           |
| Cove base adhesives                 | 50                           |
| Multipurpose construction adhesives | 70                           |

|  |     |
|--|-----|
| Structural glazing adhesives   | 100 |
| Single ply roof membrane adhesives   | 250 |
| Specialty Applications:  |     |
| PVC welding  | 510 |
| CPVC welding   | 490 |
| ABS welding  | 325 |
| Plastic cement welding   | 250 |
| Adhesive primer for plastic  | 550 |
| Computer diskette manufacturing  | 350 |

| Special purpose contact adhesive   | 250 |
| Tire retread   | 100 |
| Adhesive primer for traffic marking tape   | 150 |
| Structural wood member adhesive  | 140 |
| Sheet applied rubber lining operations specialty                                 | 850 |
| Top and Trim adhesive  | 250 |
| Substrate Specific Applications:   |     |
| Metal to metal substrate specific adhesives                                      | 30  |
| Plastic foam substrate specific adhesives  | 50  |
| Porous material (except wood) substrate specific adhesives                       | 50  |
| Wood substrate specific adhesives  | 30  |
| Fiberglass substrate specific adhesives  | 80  |
| Sealants:  |     |
| Architectural sealant  | 250 |
| Marine deck sealant  | 760 |
| Nonmember roof sealant   | 300 |
| Roadway sealant  | 250 |
| Single-ply roof membrane sealant   | 450 |
| Other sealant  | 420 |
| Sealant Primers:   |     |
| Architectural non-porous sealant primer  | 250 |
| Architectural porous sealant primer  | 775 |
| Modified bituminous sealant primer   | 500 |
| Marine deck sealant primer   | 760 |
| Other sealant primer   | 750 |
| Other  |     |
| Other adhesives, adhesive bonding primers, adhesive primers or any other primers | 250 |

- Exception: The provisions of SCAQMD Rule 1168 do not apply to adhesives and sealants subject to state or federal consumer product VOC regulations.

- E. EQc2, Low-Emitting Materials, Adhesives and Sealants, General Emissions Requirement: For field applications that are inside the weatherproofing system, at least 90 percent of adhesives

and sealants, measured by volume, shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

1. To comply with the General Emissions Requirement, products shall meet one of the following:
  - a. UL Greenguard Gold Certified
  - b. SCS Indoor Advantage Gold Certified
  - c. MAS Certified Green
  - d. Meet California Department of Public Health (CDHP), Standard Method v1.1-2010, using the applicable exposure scenario.
- F. EQc2, Low-Emitting Materials, Flooring, General Emissions Requirement: 100 percent of flooring shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
  1. To comply with the General Emissions Requirement, products shall meet one of the following:
    - a. FloorScore Certified (hard surface flooring and flooring adhesives)
    - b. Green Label Plus certified (carpet, adhesive, and cushion)
    - c. NSF/ANSI 332 certified (resilient flooring)
    - d. Meet California Department of Public Health (CDHP), Standard Method v1.1-2010, using the applicable exposure scenario.
- G. EQc2, Low-Emitting Materials, Composite Wood: 100 percent of composite wood, agrifiber products, and adhesives shall be made using ultra-low-emitting formaldehyde (ULEF) resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde (NAF).
- H. EQc2, Low-Emitting Materials, Ceilings, Walls, Thermal, and Acoustic Insulation, General Emissions Requirement: 100 percent of ceilings, walls, and thermal insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- I. EQc2, Low-Emitting Materials, Ceilings, Walls, Thermal, and Acoustic Insulation, Batt Insulation Requirement: 100 percent of batt insulation products may contain no added formaldehyde, including urea formaldehyde, phenol formaldehyde, and urea-extended phenol formaldehyde.
- J. EQc2, Low-Emitting Materials, Exterior Applied Materials, VOC content: For field applications that are exterior applied, at least 90 percent of adhesives, sealants, coatings, roofing, and waterproofing, measured by volume, shall comply with the limits for VOC content when calculated according to the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, AND the South Coast Air Quality Management District (SCAQMD) Rule 1168, effective June 3, 2011 for adhesives and sealants.
  1. Refer to Table under 2.01, B and D above for allowable VOC content (limits are also applicable to exterior materials). Refer to CARB 2007 SCM and SCAQMD Rule 1168 for any products not listed.
  2. The following materials are prohibited and do not count toward total percentage compliance:

- a. Hot-mopped asphalt for roofing.
- b. Coal tar sealants for parking lots and other paved surfaces.

K. Additional Low-Emitting Requirements:

- 1. If the applicable regulation requires subtraction of exempt compounds, any content of intentionally added exempt compounds larger than 1% weight by mass (total exempt compounds) must be disclosed.
- 2. If a product cannot reasonably be tested as specified above, testing of VOC content must comply with ASTM D2369-10; ISO 11890, part 1; ASTM D6886-03; or ISO 11890-2.
- 3. Methylene chloride and perchloroethylene may not be intentionally added in paints, coatings, adhesives, or sealants.

2.04 INDOOR WATER USE REDUCTION

- A. WEp2, Indoor Water Use Reduction, Appliances: Provide ENERGY STAR or performance equivalent appliances.
- B. WEp2/WEc2, Indoor Water Use Reduction, Plumbing Fixtures: Do not exceed water flow requirements indicated in Division 22 - PLUMBING. All newly installed toilets, urinals, private lavatory faucets, and showerheads that are eligible for labeling must be WaterSense labeled.

PART 3 - EXECUTION

3.01 NONSMOKING BUILDING

- A. EQp2, Environmental Tobacco Smoke Control: Smoking is not permitted on the property.
  - 1. Refer to Section 01 81 19, Indoor Air Quality Requirements.

3.02 CONSTRUCTION WASTE MANAGEMENT

- A. MRp2 MRc5, Construction and Demolition Waste Management: Comply with Section 01 74 19 Construction Waste Management

3.03 CONSTRUCTION INDOOR-AIR-QUALITY MANAGEMENT

- A. EQc3/EQc4, Construction Indoor Air Quality Management Plan: Comply with Section 01 81 19, Indoor Air Quality Requirements.

|                |                  |
|                |                  |
|                |                  |

*Was the material/product **manufactured<sup>3</sup> and purchased regionally?***

|  |  |
|--|--|
| Location of Manufacturer (City/State):             |  |
| Distance from Manufacturer to Project Site (Miles) |  |
| Location of Distributor (City/State)               |  |
| Distance from Distributor to Project Site (Miles)  |  |

**LEED MR Credit 2 – BPDO: Environmental Product Declarations**

*Does the product have a manufacturer's **Environmental Product Declaration (EPD)<sup>4</sup>?***

|                       |               |                     |
|-----------------------|---------------|---------------------|
| Product Manufacturer: | Product Name: | EPD Provided? (Y/N) |
|                       |               |                     |
|                       |               |                     |
|                       |               |                     |
|                       |               |                     |

1. Regional: within 100 miles of project site as-the-crow-flies.
2. Extraction, harvest, or recovery location: Location of origin for virgin or recycled resources from which the building product's components are made. (i.e. before processing or manufacturing.)
3. Manufactured Location: Final assembly of components into the building product that is furnished or installed.
4. Environmental Product Declaration (EPD): a statement that the item meets the environmental requirements of ISO 14021-1999, ISO 14025-2006 and EN 15804, or ISO 21930-2007.

### **LEED MR Credit 3 – BPDO: Sourcing of Raw Materials**

(For Division 3-10 & 31.60.00, 32.10.00, 32.30.00, 32.90.00 products and materials)

*Does the manufacturer participate in an **extended producer responsibility**<sup>5</sup> program?*

| Product Manufacturer: | Product Name: | Extended Producer Responsibility Program? (Y/N) |
|-----------------------|---------------|---|
|                       |               |   |
|                       |               |   |

*Is the product **bio-based**<sup>6</sup>? If so, does it meet the Sustainable Agriculture Network's (SAN) Sustainable Agriculture Standard?*

| Product Manufacturer: | Product Name: | Meets SAN Sustainable Agriculture Standard? (Y/N) |
|-----------------------|---------------|---|
|                       |               |   |
|                       |               |   |

*Does the material/product contain **FSC Certified wood**?*

| Component: | Vendor Chain-of-Custody # | % Wood of Materials | % FSC Wood of Materials | Vendor invoice provided? (Y/N) |
|------------|---------------------------|---------------------|-------------------------|--------------------------------|
|            |                           |                     |                         |                                |
|            |                           |                     |                         |                                |

*Is the material/product **reused, salvaged or refurbished**?*

| Component: | Reused, Salvaged or Refurbished Product? (Y/N) | Actual Cost Paid or Replacement Value (whichever is higher): |
|------------|--|--|
|            |  |  |
|            |  |  |

*Does the material/product contain **post-consumer**<sup>7</sup> and/or **pre-consumer**<sup>8</sup> recycled content?*

|                                      |  |
|--------------------------------------|--|
| Percentage of post-consumer content: |  |
| Percentage of pre-consumer content:  |  |

*If only part of **the assembly contains recycled content**, fill in the chart below:*

| Assembly Components:                             | Weight: | % Post-Con | % Pre-Con |
|--|---------|------------|-----------|
|  |         |            |           |
|  |         |            |           |
|  |         |            |           |
|  |         |            |           |
| Totals by weight (should equal 100% of assembly) |         |            |           |

### **LEED MR Credit 4 – BPDO: Material Ingredients**

*Does the product have a manufacturer's **Health Product Declaration (HPD)**<sup>9</sup>?*

| Product Manufacturer: | Product Name: | HPD Provided? (Y/N) |
|-----------------------|---------------|---------------------|
|                       |               |                     |
|                       |               |                     |

5. Extended producer responsibility: measures undertaken by the maker of a product to accept its own and sometimes other manufacturer's products as postconsumer waste at the end of the product's useful life.
6. Bio-based Material: commercial or industrial products that are composed in whole, or in significant part, of biological products, renewable agricultural materials (including plant, animal, and marine materials), or forestry materials. Bio-based raw materials must be tested using ATSM Test Method D6866 and be legally harvested, as defined by the exporting and receiving country. Leather and other animal hides are excluded.
7. Post-Consumer Recycled Content: Portion of material or product which derives from discarded consumer waste that has been recovered for use as a raw material (e.g. plastic water bottles, newspaper)
8. Pre-Consumer Recycled Content: Portion of material or product which derives from recovered industrial materials that are diverted from municipal solid waste for use in a different mfg. process, prior to use by a consumer.
9. Health Product Declaration (HPD): a report of the materials or ingredients content of a building product and the associated health effects. Defining the content of this report is the Health Product Declaration Open Standard™

## LEED EQ Credit 2 – Low-Emitting Materials

(100% compliance, regardless of Division)

### ADHESIVES, SEALANTS, PAINTS, COATINGS

|                       |               |
|-----------------------|---------------|
| Product Manufacturer: | Product Name: |
|                       |               |
|                       |               |
|                       |               |
|                       |               |

Does the material/product comply with the **VOC content<sup>11</sup>** and **General Emissions testing requirement?**  
(Volume tracked for budget method ONLY.)

| Product Name: (as listed above) | VOC Content <sup>10</sup><br>(g/l) | Volume Used (L) | CDPH Emissions testing compliant? <sup>11</sup> | TVOC Emissions Range | Source Provided? (Y/N) |
|---------------------------------|------------------------------------|-----------------|---|----------------------|------------------------|
|                                 |                                    |                 |   |                      |                        |
|                                 |                                    |                 |   |                      |                        |
|                                 |                                    |                 |   |                      |                        |
|                                 |                                    |                 |   |                      |                        |

### FLOORING

Does the material/product comply with the **General Emissions testing requirement?**

| Product Manufacturer: | Product Name: | CDPH Emissions testing compliant? | TVOC Emissions Range | Source Provided? (Y/N) |
|-----------------------|---------------|-----------------------------------|----------------------|------------------------|
|                       |               |                                   |                      |                        |
|                       |               |                                   |                      |                        |
|                       |               |                                   |                      |                        |
|                       |               |                                   |                      |                        |

### COMPOSITE WOOD

Is the **composite wood material/product ULEF or NAF<sup>12</sup>**?

| Product Manufacturer: | Product Name: | ULEF or NAF? <sup>12</sup> | Source Provided? (Y/N) |
|-----------------------|---------------|----------------------------|------------------------|
|                       |               |                            |                        |
|                       |               |                            |                        |
|                       |               |                            |                        |

### CEILINGS, WALLS, THERMAL AND ACOUSTIC INSULATION

Does the material/product comply with the **General Emissions testing requirement?** If product is a **batt insulation product**, does it contain added formaldehyde, including urea formaldehyde, phenol formaldehyde, and urea-extended phenol formaldehyde?

| Product Manufacturer: | Product Name: | CDPH Emissions testing compliant? | TVOC Emissions Range | Source Provided ? (Y/N) | Contains added formaldehyde ? |
|-----------------------|---------------|-----------------------------------|----------------------|-------------------------|-------------------------------|
|                       |               |                                   |                      |                         |                               |
|                       |               |                                   |                      |                         |                               |
|                       |               |                                   |                      |                         |                               |
|                       |               |                                   |                      |                         |                               |

10. All adhesives and sealants wet-applied on site must meet the applicable chemical content requirements of SCAQMD Rule 1168, July 1, 2005. All paints and coatings wet-applied on site must meet applicable VOC limits of the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, or the South Coast Air Quality Management District (SCAQMD) Rule 1113, effective June 3, 2011.

11. TVOC Emissions for Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1-2010.

12. Composite Wood Evaluation as defined by the California Air Resources Board (CARB), Airborne Toxic Measure to Reduce Formaldehyde Emissions from Composite Wood Products Regulation, must be documented to have low formaldehyde emissions that meet the CARB ATCM for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins or no added formaldehyde (NAF) resins.

SECTION 01 81 19

INDOOR AIR QUALITY REQUIREMENTS

**PART 1 – GENERAL**

1.01 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions and Division 1 General Requirements, apply to the work of this section.

1.02 SUMMARY

- A. Requirements for minimum indoor air quality (IAQ) performance standards during the period of construction.
- B. The Contractor shall develop, for Owner and Architect review, a Construction Indoor Air Quality Management Plan for this Project.
- C. Sustainable Design Intent: Comply with project requirements intended to achieve certification, measured and documented according to the LEED-S v4 Rating System, of the US Green Building Council.

1.03 RELATED REQUIREMENTS

- A. Examine Contract Documents for requirements that affect work of this Section. Other Specification Sections that directly relate to work of this Section include, but are not limited to:
  - 1. Section 01 11 00, Summary of Work.
  - 2. Section 01 33 00, Submittal procedures.
  - 2. Section 01 50 00, Temporary facilities and controls.
  - 3. Section 01 74 19, Construction Waste Management.
  - 4. Section 01 81 13, Sustainable Design Requirements.
  - 6. Section 01 91 13, Commissioning.
  - 7. Division 22, 23, 26
  - 8. Divisions 3 through 16 Specification Sections; Specific requirements relating to indoor air quality for each Section.

1.04 PERFORMANCE REQUIREMENTS

- A. Comply with minimum requirements of Sections 4 through 7 of ASHRAE 62.1-2010, Ventilation for Acceptable Indoor Air Quality and approved Addenda.
  - 1. Coordinate with requirements of Section 01 91 13, Commissioning, and Division 23 – MECHANICAL.
- B. Prevent exposure of building systems to environmental tobacco smoke during construction. At a minimum, take the following measures:
  - 1. Do not allow smoking on/in the project site.
  - 2. Locate exterior designated smoking areas at least 25 feet away from entries, outdoor air intakes and operable windows.
